You could consider another approach -- phase locking a 1296 MHz oscillator to your 72 MHz xtal.

Is there some magic to using the 72 MHz oscillator? Gigahertz synthesizers are cheap and simple these days. Back in the bad old days multiplication was the cheap and easy way to get stable high frequencies. Today, that helical resonator would probably buy the synthesizer chip and associated support circuitry, and you needn't fiddle around with stage after stage.

```

I wouldn't try a diode to go from 72 to 1296 but will double or triple
the oscillator and perhaps try the diode from there.

Sorry, it was a factor of 9, not 17. I just found the circuit:) The xtal
was 17 MHz.

I have a couple of SRDs but they seem to be optimised for 500MHz input
and I don't know if they would work at lower frequencies. I would assume
that the diodes I mentioned are some sort of SRD or "snap" diode so I
might pull one out and try it.

Yeah, saw that. Trouble is that I need EVEN harmonics :)
Anyway, there was some interesting info on snap diodes etc. Makes me
think that the diode used in the gear I have, aren't SRDs as these seem
to be mainly for microwave use. The other info I gleaned was that it's
easier to get low phase noise with straight multiplication than it is
with PLLs. Not that I have an urgent need for low phase noise - but it's
interesting nonetheless.

>Yeah, saw that. Trouble is that I need EVEN harmonics :)

If you want EVEN harmonics, then use the 'fullwave rectifier' circuit.
This is essentially identical to what you use to rectify the mains, but
it works at RF. One version is the simple bi-phase circuit, consisting
```

of a ferrite input transformer (ratio 1 : 1+1) and two rectifying
diodes. An alternative is the fullwave bridge version.

I have used the former with great success to multiply by 2, 4 and even 6
but, of course, you get a lot less with the higher order harmonics.
Also, the relative suppression of the even harmonics is less.

>Anyway, there was some interesting info on snap diodes etc. Makes me
>think that the diode used in the gear I have, aren't SRDs as these seem
>to be mainly for microwave use.

I did get involved with a comb generator which used a single step
recovery diode, driven at 6, 7 or 8MHz, to generate fairly equal
amplitude harmonics (both odds and evens) to around 600MHz.

>The other info I gleaned was that it's easier to get low phase noise
>with straight multiplication than it is with PLLs. Not that I have an
>urgent need for low phase noise - but it's interesting nonetheless.
>Alan
>

I didn't know that the "New Topology Multiplier Generates Odd Harmonics"
circuit existed. It's every bit as simple as the fullwave rectifier
circuit for generating even harmonic!

Huh? I thought you wanted to multiply by 18. 18 = 3 * 3 * 2.

If you were specific about what you want to do with the output, I missed it. If it's just low-level stuff (e.g., a signal to feed into the receiver input), you don't need much power and the multiplier can be very inefficient and still do what you want. As you note, phase noise will be better (possibly much better) than other ways of doing it, and it could be that the signal level will be a lot closer to what you want. You'll have to shield things pretty carefully to get down to microvolt levels from a PLL or other full-blown oscillator on 1.2GHz. There might already be enough 18th harmonic in the oscillator output to do what you need. I have some little very fast CMOS single gate chips that have square enough edges (under half a nanosecond rise time, unloaded) to generate quite a bit of harmonic content up that high. Though a PLL would work fine, you then need a way to set up the PLL chip, assuming you use one of the readily available programmable ones. I know for me, I could hack a decent analog multiplier with filters a lot quicker than I could a decent synthesizer. I had to do a x9 not long ago, and used a multiplication scheme. Also, I've seen small crystal oscillator modules from two different vendors that used a PLL to lock a 100MHz crystal to a lower frequency reference, and then used analog multiplication up to several times 100MHz--they are doing it for low phase noise.

Cheers,
Tom

Quite right. 18 is an even harmonic of course but I forgot about the
3*3*2 bit :)

>
> If you were specific about what you want to do with the output, I

It's to test a 1296 down-converter basically but will try a CW
transmitter later so a bit of grunt wouldn't go astray.

.... There might already be enough 18th harmonic in the oscillator
> output to do what you need.

Could be. AT the moment I have a 2N5485 as the osc and a 2N918 as a
doubler but the 2N918 runs out of puff well before 1296MHz. I have some
BFR91s so I might put them into use.

But unless you need a signal to tune the converter to the right frequency, this is quite a bit simpler. So long as the converter is tuned to the right general frequency, merely something with good harmonics will do. The fact that they will be attenuated at the desired frequency is not a bad thing, since you won't want a strong signal for tuning the converter anyway.

Your original post didn't give an end use, but it was easy to assume you needed a clean signal for a transmitter of local oscillator injection in a converter. You don't want unwanted signals there.

But for a signal generator, having extra harmonics isn't really a problem (unless you can't be sure that your converter is tuned to the right frequency). The extra harmonics will just be ignored by the converter's tuned circuits.

There was a time when a lot of cheap signal generators actually used
harmonics for their upper ranges.

Does anybody have the name of the substance that was sold years ago for removing the enamel coating from wires, or maybe the name of something new? You would soak the wire in it and it would soften the coating and then you just wiped the goop off the wire.

I think you're referring to GC Electronics Strip-X.  Doesn't seem to
be on the market these days, as best as I can tell.

I found a MSDS which states that it's 70% methylene chloride, 25%
cresol (isomers of cresylic acid), around 5% ammonia, plus some wax
and thickening agents.

One poster in an earlier thread stated that it was designed to work
with Formvar insulation, and might not work as well on the newer
Polythermaleze insulation.

There's a paint-and-finish stripper of a similar name (Klean-Strip
Strip-X) available these days.  Like the wire-"Strip-X" it contains
methylene chloride, but it has no cresol or ammonia.  Its other
ingredients include toluene, xylene, and methanol, plus a thickener
(it's relatively goopy and would probably have to be wiped off of the
wire using a paper towel or Q-tip or something like that).

These chemicals all come with fire- and health-hazard warnings... if
you use 'em, do so with proper care and precautions!

I just put a glob of solder on the soldering iron tip and dunk the
enameled wire into it until the enamel melts and the solder tins the end
of the wire. Been doing that for over 20 years now...seems to work A-OK.

Thanks Scott - I forgot that technique - Yes it does work - sometimes when
you get some age on your brain, it tends to lose some of the lesser used
items. - Best 73's de Howard W3CQH

.

Almost all modern enameled magnet wires have Beldsol-type coatings
that are supposed to burn/vaporize at soldering temperatures, yes.

I think that some Beldsol-type coatings have a further nylon overcoat
that is quite impermeable to most of the solvents I have sitting on my
shelf... yet it vaporizes if I dunk it in solder. I think
Polythermaleze is a polyester of some kind and seems to be more
amenable to the solvents I have.

Occasionally I will run across a different enamel that's supposed to
stand higher temperatures... often the color is not the same red as
Beldsol but sometimes it is!

These seem to have a dark red or maroon colouring as opposed to older
enamels which were a golden colour. These are certainly not heat-strippable.
I don't recall the heat-strippable enamels much before the 70s.
Alan

Hi Michael,
hi Clint,

honestly speaking, I'm not quite sure if this part is really from
Motorola, but it is mentioned in a "consumer and automotive application
note" from Motorola and many other well known mot. ic's are listed in
this note like the famous MC1350 if amp.

The May 2008 QST has WA2EUJ's winning entry for the ARRL Homebrew challenge - the TAK-40 is a homebrew SSB transceiver made out of $49.50 in parts.

I am truly fascinated by this gadget. I ordered the parts (alas, inflation from entry time until now has driven the total bill up to closer to $60 these days... but some stuff from the junkbox brings it down again for me. And that's still cheaper than a new copy of the ARRL handbook!) and hope to build it in the next few weeks.

Even though it won in the "PC-supported" category, it does not require a PC to use it at all, just to program during construction the PIC microcontroller which does all the T/R switching as well as VFO and BFO and frequency counting magic. Get someone to program the PIC for you and you won't have to use a PC at all.

Some (including me) had previously postulated that the PC-supported entries would be closer to a software-defined radio, with a low IF and a lot of digital processing done via a PC's sound card and software. I am actually reassured a bit that this is not what the winner did... but wonder what software-defined entries were submitted. Maybe there were some, but in terms of performance WA2EUJ's seems to have beat them.

The WA2EUJ entry uses a PIC for T/R switching and even drives DAC's for VFO and BFO tuning (it's necessary to shift these for modes, T/R on CW, etc.) with frequency counting via the PIC and display on a LCD, but the only use for a PC is to program the PIC.

I think KD1JV's entry, in the non-PC-supported category, will be interesting as well. I think it gets published this month, but on KD1JV's website he already has construction details. His PTO looks pretty nifty!

Tim.

Hi Tim,

I have no possibility to find out the pinout from a tuner as I have just
a hand full of this mysterious ic's without a documentation on them.

So at least I will have to blow some of them to find out the pin out
with a bit of luck if it is not a I2C device.

Oh, no, predates microcontrollers in TV's for the most part (not by a
lot but at least a little). It probably worked with another chip that
did LED display of channel number and handled pushbuttons for up/down.

The next generation did on-screen display of channel number, that's
where I2C started showing up in at least some tuner/TV's.

Tim.

The article is called "Some Thoughts on Home Receiver Design". The
second
conversion to 455 kc. was to avoid having the BFO on the lots-of-gain
IF, and to
permit the use of a crystal controlled BFO, yet have it be adjustable
by moving
the 2215-to-455 oscillator freq.

The first IF is 2215 kc. If you can find a junked Sierra 126B
selective voltmeter,
it has nearly-identical filters inside. Some other models of Sierra
selective voltmeter
may have them too.

>=A0I've

The Squires article was in Sept. 1963 QST.

It was necessary on the higher bands. The IF was only 2215 kc., and on
15 meters the image rejection wasn't too good with just a single tuned
circuit.
The quick solution was an RF Q multiplier. But it seems to me to be an
add-on;
what it does is to boost the desired signal by increasing the
effective Q, rather
than rejecting the unwanted by adding more poles.

IMHO the better solution would be a double-tuned input circuit.

> There was a tube receiver in QST about February of 1973 (or was

"An Experimental Receiver For 75 Meter DX Work", by W1KLK, February
1972.
Uses a 7044 computer duotriode as a grounded-grid RF amp, followed by
a 7360 mixer.
There are no less than four tuned circuits before the mixer, and you
have to retune the
preselector often. Not for idle bandscanning; this RX is for digging
out the weak ones.

The 6AR8 is reportedly microphonic, and other types are preferable.
7360 was considered
a transmitting tube, which is why you find it in the Transmitting Tube
manual, and why
almost nobody but RCA made them.

Alternatives are the 6JH8 and 6ME8, which are less expensive and more
common. They were
used in TV sets. At least one ham rig maker (Swan) changed from using
the 7360 as a
balanced modulator to the 6JH8.

The Southgate Type 7 receiver section uses a 7360 mixer (google my
call to see).

You're right.. Hmm, Very old device though, and I'm trying to think
where I've seen them, could be in old Grundig or Philips television
tuners, might be worth searching around for some old television
schematics for the OP.

Ah! Bless you "Erg". The ONLY thing I could find was as you state for a very old (45 years) copy of a 4CX1000 data sheet. Even Google was befuddled.

It makes sense to me (And to the builder of the not quite finished amplifier that I inherited) that Eimac would put the lowest potential terminal at the bottom. And then proceed to the screen. Obviously, they had something else in mind.

Wired with the bottom ring to ground, making the cathode 6 Volts AC above ground gives rated power out, but about 200 Watts of it was 60 Hz hum. The task of making the change is pretty daunting. Not impossible, just daunting, and I wanted to make certain that this was where my hum was coming from (31 Volts of bias, ~25 of DC and 6 of AC) before I removed half the amplifier to get the sub-chassis out.

Tnx again.

I am trying to locate the article for a simple 2 transistor topband AM phone

transmitter
from many years ago that I am sure appeared in "Practical Wireless" sometime between 1958 and 1965.
If memory serves me correctly, it used two germanium transistors, OC71 and OC44.
The OC71 was configured as a microphone amp/modulator and the OC44 as a Hartley oscillator.
The oscillator coil was wound on a short piece of ferrite rod.
I wonder if anyone can help in any way?

If the 2E26 is operating class C, I think you'll have a problem generating enough voltage swing at the 2E26 grid unless you use tuned circuits to step up the SS drive circuit's output. I have kinda similar set up, DDS VFO drives SS broadband chain drives (1:4 stepup here) 6CL6 (tuned circuit here) drives 6146.

Right.  The 2E26 needs about 80-120V pk-pk on the grid (depending on
plate voltage and power output), at a couple hundred mW.

Aaah, I see. If I try to use passive grid input circuit how am I going to get the required voltage swing on the grid which could be in the order of 80-120V pk-pk? Noted thanks.

I imagine that's why the hybrid rigs of the past that used tube finals also used a tube driver like a 6CL6 or 12BY7. Just easier to get the required voltage with a tube, and they had the HV anyway for the finals. You can certainly get on the air with a two-tube rig - all the handbooks of the era had them. If you want to rethink a tube oscillator/driver here are some good tube choices

6AG7
6CL6
5763
6AH6
6AC7
12BY7 (expensive!)

You should also consider joining the glowbugs email list, where ham radio tube homebrew is king. Google should pull up the info to sign up. They will definitely get you on the air.

And if you look at the larger booksellers online you can buy the book for a significantly lower price....at Barnes & Noble for instance if you're a member (and if you buy a lot of books/DVDs I don't know how you can afford not to be) the volume runs around $90 with free shipping. Looks like it's $90 on Amazon.com as well.

Haven't had a chance to take a look yet but from the TOC looks like a good read....have added to my "gonna buy' list.

Congrats Bill....

Wherever you buy it and whatever you pay for it, be SURE ahead of time that it INCLUDES the Mathcad disk. That disk is very excellent and valuable, very far beyond the price that is being charged.

I have a project I would like to build, and this would be for me a first time PIC controller project.

I am looking for a PIC to do the following:

1. Address 17 parallel binary weighted bits (need at least 17 I/O's in addition to inputs from (2) below and outputs for LCD (3) below.
2. Have a keypad or rotary encoder to select combinations of the above bits.
3. An LCD display of a frequency generated by the PLL device attached to it per instructions below in (4).
4. Be able to enter a frequency such as 2300.6375 MHz, and do the math to subtract an IF frequency and divide the resultant frequency by some multiplier to address the parallel bits.

The PIC should be available with an evaluation board containing an LCD
display a keypad or rotary encoder. I do not want to have to design a
circuit board for a one time project.

For background, I have a Scientific Atlanta synthesizer that is designed
to generate a frequency in the range of 100.2x to 110.7x MHz to phase
lock a microwave brick oscillator used for a C band satellite up and
downconvertor. The unit has an external BCD switch which is designed to
display 3200.XX to 4200.XX MHz and I wish to re purpose it for a
different frequency band.

Any recommendations?

This PIC, PIC18F85J90, from Microchip should do it. Here's it's demo
board:
http://www.microchip.com/stellent/idcplg?
IdcService=SS_GET_PAGE&nodeId=1406&dDocName=en530757

Here's the PIC:
http://www.microchip.com/stellent/idcplg?
IdcService=SS_GET_PAGE&nodeId=1335&dDocName=en026342

MicroChip's IDE, MPLAB and compilier C18 are free from their site.

I have an interest in making RF filters with low distortion (for example, as preselection filters for receivers). I've found that very often I need to use air-core coils to get the low distortion I want, but it would be convenient if I could use powdered iron or ferrite core toroids to get higher Q at low frequencies without having to make the coils physically big. I've always assumed that powdered iron would give me the best results, but someone suggested I try low-permeability ferrite. I just did some experiments with that. I wound three toroids, all 0.37 inch OD cores; one is on mix 2 powdered iron, and the other two are on type 68 and type 67 ferrite. I put each coil in a simple 1MHz high pass filter: two 2.2nF caps in series, with the coil connected between them to ground. I tested for harmonic distortion with a 1MHz input, and for the 2.42MHz intermod product with 0.62MHz and 1.52Mhz inputs.

With about +16dBm coming out of the test filter at 1MHz, I measured second harmonic at about -95dBc for the T37-2, -90dBc for the FT37-67 and -57 for the FT37-68; the third was at -74dBc, -61dBc and -51dBc for the three coils in the same order.

The 2.42MHz intermod, with each tone at +18.5dBm out of the combiner, measured -71dBc, -58dBc and -38dBc for the coils, again in the same order.

My conclusion from this is that at least these two ferrites aren't going to help me in my search for a better low-distortion core material, but at the same time, it was interesting to note that the higher permeability -67 performed better by far than the lower permeability -68. It gives me some hope that if the ferrite materials guys went looking for a formulation that would be specifically as low-distortion as they could get, they might find something pretty good.

Before someone asks, no, I didn't run a T37-6 core coil along with
these. I expect it would be a little better than the T37-2. And I've
measured a few coils wound on (unknown formulation) powdered iron rods
that show significantly lower distortion than those on toroid cores;
but of course those have a large "air gap" and relatively high
external field.

Cheers,
Tom

Thanks; It has a great looking display. No keypad or shaft encoder
though, I hope I can figure out what I need to interface those.

Good info Tom, I'd like you to try -61 material, but I don't have anything
but T50 in that ferrite.

If size is not an issue, consider Microchip's Explorer 16 board. No encoder or keyboard, but the PIC has a zillion pins all brought out to card edge connectors. Microchip has very nice proto boards at a reasonable price you could use to connect the encoder, keyboard and synthesizer. The board includes a 2x16 display, as well as serial and USB interfaces. The Explorer 16 comes with a couple of PICs, both huge things with gobs of memory so you can do the programming in C and not be constantly looking over your shoulder. The "Student Edition" of the C30 compiler is free.

If money is no object, they have a thing they call the "Graphics PICtail" that plugs into the Explorer 16 which is a quarter-VGA with a touchscreen, and their graphics library implements a very credible encoder on the touch screen. They also have a numeric kepad on the touch screen, the screen is really too small for a full keyboard.

Since you seem to have decided on a PIC, I assume you have a ICD 2, PICkit 2 or something of that ilk for programming.

..

How do you determine the formulation of the cores that you use (I am
presuming they are taken from the junk box...)?

Michael

Take a look at the http://www.mikroe.com/en/tools/easypic5/
You will probably need to upgrade the CPU but you have a lot of work
in front of you before you get that far.
```

I use the Pascal compiler but I expect the C and Basic versions are
just as good. The on board programmer will handle the output from
MPLAB but not as convenient as the mikro compilers.

FWIW, that is an ambitious first project....

Well, I trust places like Amidon and Bytemark to supply what they say... The ferrite toroids were delivered last week from Bytemark. The powdered iron come mostly from old stock we have upstairs, some from ones I've ordered in the past from Amidon. (I have a different batch of cores in front of me right now that I'll try running the same test on. These cover a wider range of formulations, but all in (F)T50 size -- 'cept I couldn't find a T50-6, so I may look for a T37-6 or just run a T68-6A I do have.)

But you bring up a good topic. You can measure the dimensions of a core and figure its relative permeability from the inductance of a coil wound on it, and make a guess about the formulation from that, but short of doing more complicated tests, I don't know that you can really determine the formulation. Powdered iron toroids generally come with a color code paint job, but the ferrite toroids I've always gotten have nothing on them to tell you what they are. I've found that an "extra fine" tipped paint pen is a good way to put a marking on them. You could color-code them, but I just write what they are on them, such as "FT50-67". That's not so important if I keep them nicely sorted, but if I've wound a coil on one and then want to re-use it, it's a big help.

Cheers,
Tom

Hi Harold,

Well, I'm curious about -61 too. Turns out I have some FT50-61's (or
so claimed by Baggy Bob...), and I have FT50-67, FT50-68, FT50-43,
T50-1, T50-2, T50-3 and T50-7 to try for comparison. Unfortunately,
we're out of T50-6, but maybe I can arrange a test on a different -6
against the same size -2, at least. Not sure if I'll get to the coil-
winding and testing today, though.

Cheers,
Tom

Well, if you're going to put it off, I can send you a few T50-6's. Probably
some -10 material too. BUT! I want your results when you get them! If you
have them in a filter, would need to know the operating Q as well, but if
just the toroid itself, wonderful to have.

Sure, I'll test 'em. I'll go ahead and test what I have, and add the -6 in when I get them. I have the test setup documented well enough that it will be easy to repeat the same tests later. Of course, the test is always with some particular test setup. Even if I just connected the toroid shunt across a 50 ohm line with source at one end and analyzer at the other, it's still a particular environment, and the results will be different if, for example, I add in my 1MHz bandpass filter at the generator output (to kill generator harmonics) and add my 1.5MHz HPF at the analyzer input (to kill the 1MHz so the analyzer can be set to a lower range without contributing significant distortion of its own). Each of those filters changes the source or load impedance. I suppose I could have made diplexing type filters that maintain a constant impedance vs frequency, but these guys are big enough as it is, using high Q air core coils.

Anyway, the particular environment I chose for the coil test is in a simple high-pass filter, nominally third order 0.1dB ripple Chebychev with a 1MHz -3dB point: 2.2nF series, 5uH shunt (coil being tested), 2.2nF series. The distortion products I'm reporting are all 2MHz and above, where the output capacitor passes things with very little attenuation, and the excitation voltage across the inductor for a 1MHz input is about 1.7dB higher than the 50-ohm source indicated output. I suppose I could make the test more interesting by exciting a high circulating current in the inductor, but it seems like if I excite them in the test circuit to where distortion is clearly measurable, the relative results be a good indication of relative performance in other circuits.

Cheers,
Tom

It's easy enough to find the number of turns required for a particular inductance on a known toroid core, but how do you know what size wire to use so that the turns will all fit on a single layer? That's this morning's geometry problem. I suppose you can find formulas, but a quick Google search didn't turn up anything useful for me this morning. What I worked out, that may be of some use to others, is:

Given D = inside diameter of the toroid core, and d = wire diameter, same units, and N = number of turns:

N = integer(pi/arcsin(d/(D-d)) (arcsine in radians...)

d(max) = D*sin(pi/N)/(1+sin(pi/N))

If you want to calculate in degrees, replace pi by 180. To allow for the inevitable little gaps and the wire not hugging the core ID closely, pick a wire with a diameter at least 10% less than d(max).

Also, if you use a smaller wire so the turns can be spread out or bunched together, you'll find that you can significantly adjust the coil's inductance that way, especially with low-mu toroids such as -2 and -6 powdered iron.

Cheers,
Tom

Nice, but the software "Mini ring-core calculator" (ver 1.2 free) will do
this for you, as will the Amidon manuals.

:-) I knew if I posted that, someone would tell me about a nice little calculator. For others who may have trouble finding the mini ring-core calculator, try: http://www.dl5swb.de/html/mini_ring_core_calculator.htm

I did find another somewhat similar calculator as a Java applet, but it seems to get the wire size wrong. The one Harold mentions gets the wire size right, and does a whole lot more. Great to have around if you're winding toroids, and it also does simple solenoid coils and inductance of straight wire. You can even select US units (AWG; inches) or rest of the world units (metric). Nice that it also tells you the length of wire you'll need to wind the coil. Includes a resonance calc and more.

Thanks, Harold!

Cheers,
Tom

I have an undercounter AM, FM radio. When I plug the power supply to my
laptop
into an outlet in the same room, the FM signal gets very noisy. Upon further
investigation, I found that just plugging the ac cord into an outlet and
holding it near the laptop causes the noise. Also holding the laptop near
the power cord of the radio causes the noise. Holding the laptop near the
radio doesn't cause the noise.
So I think the laptop is generating noise that gets induced into the ac
line.
I tried wrapping the radio cord about (ten turns) through a (junkbox)
toroid without any help to the problem. The toroid is 3" in dia. It's
probably an iron laminate core
(low frequency) so may not be right for filtering the ac line.
My next step is to go to Radio Shack and try to purchase some clamshell
type
line filters.
Any ideas to eliminate this noise from the ac line?
Mike

Switch-mode power supplies are dirty ... lots of harmonic energy. The interference is both radiated and sent back into the ac mains. A line filter plus physical separation are the things to try.

 ** But they don't usually generate energy in the FM broadcast band (i.e. 88 - 108 MHz) -   that is more likely to be due to the CPU and associated high speed circuits inside the PC.

Some clocks for digital devices are intentionally "spread spectrum"
since the digital stuff doesn't care.  This helps pass FCC type
acceptance.  Spread spectrum is FM noise.

I remember that IC company IMI used to make SS clocks for digital
stuff.  I wonder what ever happened to them.

So, is it conducted noise or radiated noise?
The solutions are different.

If conduted, you can stop it with filters.
If radiated, you can stop it with shielding.
If both, you need both solutions.

It "sounds" to me like the radio is the problem, not the laptop, or
the laptop power supply.
Also, it's likely the weaker the FM station, the more noticable this
could be, depending of course on the type of detector the radio uses.
For AM, the noise could be horrendous!
```

An obvious thing to try: See if you have more than 1 branch circuit available (in the kitchen, I presume??) If so, plug 'em in on separate branches and see if this helps. (Note: Won't solve radiated noise, but might help with conducted - and to me, that seems to be the problem.)

Unless of course, I totally mis-read your post.

You can also do this test with an extention cord from another branch circuit elsewhere in the dwelling. Even though the two branches have at least some components in common, the separation can create enough losses to lower the conducted emissions to acceptable levels.

Good luck.

Good call Phil,
  Maybe I didn't say it clearly,  but just plugging the ac cord in and
holding
it near the laptop induces noise on the power line. ( ac cord only, no
switching power supply attached)

Some of these undercounter AM/FM sets use the power line as an
"antenna". If you look closely you might find an antenna screw with a
metal clamp going around the power cord. If this is the case, you are
likely creating an extension of that antenna by plugging in one end of
the computer power cord and placing it near the laptop (which is
undeniably an noise source).

The fix is to get a separate FM antenna for the receiver and mount it
outside or at least some distance from your computer. Having a balanced
300 ohm type antenna might solve the problem.

Looks like that radio is using the main lead [power cord] as FM antenna.

So if you decouple that mains lead noise will _not_ get better.

Just keep the 2 separate.
Or, if the radio has an external antenna connector, use that.

Hi OM�s
```

I�m searchiung for an article of the Feb.QST Page 35 named Build your
rotor control.
If you culd mail me a copy of this article I would be very glad.
73
Hans
DD4KA

You either have the wrong magazine or the wrong year/month. It's not in Feb
2008 QST.

...and if so what can I do about it?

I have a cobbled-together setup that almost works. I coach swimming, and I
have a small video gadget that links to a Tivo and a TV via one of those
video transmitters that you can get from ebay. I think it is a 1.2 gHz
50mw version.

The kids swim and then watch, and having the Tivo means there's a
continuous flow of action. The problem is that the picture quality is bad.
I'm only 20 metres away and there is a direct line-of-sight from
transmitter to reciever - ocassionally with a body or two in the way; but
even without, there is considerable jumping and colour distortion and

generally a bad picture. If I stand still at just about any distance I can find a place that gets a good picture, but moving - even turning - makes it change.

The ceiling and the upper half of the inside walls of the pool are panelled with strips of aluminium sheathing - about 6 inches wide and 20 or more feet long. These are separated by about a 1-inch gap along the long edges, and mounted to a framework (which is mounted to concrete) with some sort of clip arrangement. This is a box about 220 feet long and 25 feet high.

What's the best guess for improving the picture? More power? Different frequency? Antenna mounting (I could wear a beanie with it sticking up from the top - that'd be cool)?

Hello,

When the multi path effect only affects received signal strength, you can find many places with good reception and many with bad reception.

Best thing is to try it in an empty swimming hall. Your environment is stable in that case. Move slowly < 1"/s and see what happens. At 1.2 GHz (WL about 10", 0.25m), the distance between bad reception and good reception can be as low as some inches.

50mW is more then sufficient power for such an indoor application, so assuming reasonable receive and transmit antenna, increasing power will not help. You might switch to another channel or look to the picture with transmitter off to check for interference from a similar or other system sharing the same frequency.

In case of severe multi path effects bad and good reception may alternate within a yard (1m). When in the good places the reception is noise free, signal will have sufficient strength.

With severe multi path, where path via reflection can be many yards longer then the direct path, not only signal strength, but also received signal quality is affected (delay spread).   In this case you will find few places with reasonable reception, even under good signal strength.

Given your equipment (probably Frequency Modulated system with one receive antenna), a directional receive antenna may give improvement. The disadvantage is that you need a second person to have the antenna aimed at the transmitter (in case of moving setup).

If this all is not possible and it must be wireless, you have to

divert to multi antenna systems (space diversity) in combination with
channel equalization or real wide band systems based on OFDM or other
multi path resistant modulation scheme.

Hope this helps you a bit.

yes it seems so...I have seen the same thing with those devices.

it is very difficult to solve, you would need better antennas...

in your case it may be more practical to use a coax wired connection

For electrical saftey around water...be VERY careful that all
equipment is properly grounded, that the outlet grounds are wired
properly and I would also use GFI circuits.

You're not going to get a balanced mixer out of a single 6BE6 either.

But, on does have the advantage that beam deflection tubes aren't just

used as first mixers. Balanced modulators and mixers in SSB transmitters.
Product detector in a receiver. There, noise isn't the same issue
as in a first mixer.

Well that's the first problem. Those cheap video transmitters are
barely worth what you paid for them. There is a huge quality and price
difference between models. Pay $50 and you get $50 worth of video quality.

> The ceiling and the upper half of the inside walls of the pool are panelled
> with strips of aluminium sheathing - about 6 inches wide and 20 or more
> feet long.

Ok, so not really a perfect environment for wireless. :)

> What's the best guess for improving the picture?

Get a better unit. Can you possibly run cable? Either use a better grade of video cable, or use a video-over-copper extender if the cable path is pretty long. Oh, and stay away from cheap video baluns too.

> More power?

If you have true line of sight, you are probably ok with the power.

> Different
> frequency?

Is this really something you can change? I mean more than just a frequency within a range? If you can change bands, then maybe --- that usually takes dual-radios etc.

> Antenna mounting (I could wear a beanie with it sticking up
> from the top - that'd be cool)?

The other poster Wimpie is right on. If you think it's multipath, then either use antenna diversity by using two antennas (which of course your radio has to support), or try using a directional antenna with a tight beamwidth. The stronger (higher dbi gain) antenna will have a smaller horizontal/vertical beamwidth. And so the chances of multipath will be lessened.

Keith

I have a handful of 12BA6 and 12BE6 tubes. I also could use an AM broadcast band transmitter for use around the house. I was wondering if these tubes could be used for a 1 or 2 tube transmitter in the BC band at 100mw or lower. Searching on the internet, I have found a few circuits all using different tubes but not these.

I love building and troubleshooting tube circuits but I lack the knowledge to "engineer" a circuit using these tubes. I wonder if someone would be kind enough to offer some advice on how I could get this done. Do you have a schematic of a circuit that would use these tubes? Is it even possible with these tubes? Is it a fairly easy task for someone with the knowledge to create a schematic for this?

Thanks for your time.

```

A number of new radios with high-performance front ends use 2SK1740's in the mixers. (e.g. the 756Pro3, Omni 7n - in fact you can find their schematics on the web). If I wanted to grab a couple of these for my experimentation, where could I buy them? They're almost certainly surface mount but that's OK.

The previous generation part of choice seems to be the 2SK125 (as illustrated in the ARRL handbook) and I'd like to find some of these too but these seem to be obsolete.

Any other parts to look at? Sabin was using the 2N4416 (common-source but same idea) in 1970. Today would a J310 be about equivalent?

Is the actual part number less important than matching when it comes to performance?

Tim N3QE

Take a look at this one. http://www.dogstar.dantimax.dk/tubestuf%20/amtx-1.htm
The problem will be finding a crystal for an unused frequency in your area.

or maybe this will help. http://www.geocities.com/wa2ise/radios/amxmit.html

Mike

"In view of such harmony in the cosmos which I,
with my limited human mind, am able to recognize,
there are yet people who say there is no God.
But what really makes me angry is that they quote
me for the support of such views."

Indeed!

My tests were based on the first mixer for a SW receiver (gah, which I
have still to build >.< )

Cheers!

Looking for some information -

A while back - someone put together an article - whereas they made single board computer in a keybd - with sound card & either usb or serial ports and port for external Hard drive & screen.. and it ran on XP..

I want to use this on HF/VHF portable operation!

Due to a system crash a bit ago I seemed to have misplaced the construction article..

Anybody happen to have a copy?

I have that exact transmitter here - it'll take synthesized RF OK if
you want to get fancy and have no xtal :-)

Cheers,

Hi,

I saw a thread on diyAudio.com a while back a fellow had a pile of
obsolete transistors (rf transistors are often used by us HiFi nuts).
Maybe you can find some there on a search?

Cheers,
--
Gregg

Have you tried calling ten tec? They are usually able to supply spares
at reasonable prices.

wrote:
> ...and if so what can I do about it?

Are you holding the transmitter while you're moving?

I am picturing you walking along the side of the pool as the kids swim from end to end.
It's quite possible you are detuning the transmitting antenna when you step.

This could be electromagnetic coupling, capacative, or who knows what??.
The fact that you can stand still and get a good picture is a clue. - one that would seem to eliminate the multi-path thoeries....

I generally agree you get what you pay for. But at 1.2GHz, these are going to be very small wavelengths. My first inclination is that this is not a multipath problem, though it is impossible to tell without further experimentation, and knowing a lot more about exactly what type of modulation scheme is being used.

I second the thought about electrical safety around kids and water.

Oops, another thought just came to me.
If you're moving the camera / transmitter, it might have a real
chicken-s^it timebase (crystal?) or whatever and could be sensitive to
motion and going slightly off frequency with every bump (step taken).
Maybe you can eliminate this possibiliity by walking very softly.
Like that Karate guy on TV used to do on the onion paper...  :)

PLEASE don't even THINK of using that circuit! There is no
isolation between the 120V input power and the audio connector.
That's just plain DANGEROUS!

(I'd also like to know why you want to put a transmitter on 455kHz...)

Cheers,
Tom

I built the Muntz circuit(or very similar) back when I was in high
school in the 60s. I lived about 3 blocks from the school and could
still pick up the signal there on a small transistor radio. I was
rebroadcasting a commercial AM station I couldnt pickup on my little
transistor radio.

It is almost certainly multipath: The frequency, mobility, and environment are wrong for what you're trying to do. If you can lower the frequency - the lower, the better - then this will help. For example, 72 MHz. You an make it legal by applying for an experimenter's permit (if in the USA, see FCC form 442).

I'm not sure if you can find any commercial transmitters below 900 MHz, so you may need to DIY.

There may be wireless products for DVB-H, DVB-T which would theoretically be an improvement.

As one poster mentioned, your best bet may be a cable.

Just found your question whilst searching oc71 on google and this page
is just above it on the results:

http://www.arar93.dsl.pipex.com/mds975/content/trfradios02.html

Is it what you're looking for?

Cheers,
Tim

Analog Devices has the AD603 et al. From the AD603 datasheet:

"The AD603 is a low noise, voltage-controlled amplifier for use in RF
and IF AGC systems. It provides accurate, pin-selectable gains of -11
dB to +31 dB with a bandwidth of 90 MHz or +9 dB to 51+ dB with a
bandwidth of 9 MHz."

I have these following items I can't use and I would like to trade for items I can use.

Shure Hand Held Mic.. cm 16r This is a noise canceling mobile mic. with a 6 pin plug NEW.. and I can't use it.

Slinky Dipole antenna. 10-80 mtrs.. With directions. This is a new antenna and it was never installed.

Motorola 12 volt power supply. I was told this is 12 amps.. could be 16 maps

Model HPN 1004A.. Needs minor work.. fraid power cord. other wise its working. not enough current for my needs. And I can't store it in my small apartment.

Motorola white external speaker. No mounting bracket. But in nice shape,

I would be interesting in trading for 20-25 amp power supply,, 12 volts Need not be working. Astron.. or something like it. Or power supply parts.

Antenna tuner,, or parts for a antenna tuner. If it needs work I am open for that. MFJ.. or someother

Please e-mail me at mkulyk@optonline.net

LOL - Don't worry. I'm not using _THAT_ power supply. I made a solid-state supply that gives me 12V ~120ma heater voltage and ~180V B+. Isolated from the mains. But I thank you for pointing that out. Ya never know!

No. I'm trying to verify that the coil in the pictures found here

http://2xl.homelinux.com/riverty/downloads/radio/dscn1573.jpg
http://2xl.homelinux.com/riverty/downloads/radio/dscn1574.jpg

not the IF transformers in square cans - BTW, could be used for the ocillator tank in this circuit found here

http://2xl.homelinux.com/riverty/downloads/radio/xmitter.gif

There are no markings except for a brush-stroke of orange on one end. This coil was salvaged out of an old AA5 radio and I *think* it's for this purpose. Can anyone verify this?

Thanks again.

>That's just plain DANGEROUS!

That circuit definitively requires an audio transformer with isolation rated many times the mains voltage. Also the antenna and antenna ground connection require capacitors with considerable voltage rating.

At least in Europe, with line voltages about 220 V, AC/DC receivers were common with similar circuits using U-series tubes with 100 mA series heaters. The antenna and ground connection was typically rated at 3750 VDC. Most televisions in Europe in the pre-transistor era used 300 mA P-series heaters. In both radios and televisions a half wave rectifier was used, with an anode power supply around 200 Vdc.

Of course you should always check the orientation of the mains plug, before working within a live chassis. Current regulations require the use of an insulation transformer when working inside equipment with such power supply.

I don't know why everybody always seems to recommend the Microchip series of controllers, they aren't the only thing out there.

Check out the chips from Parallax, namely the SX28.

http://www.parallax.com/Store/Microcontrollers/SXChips/tabid/138/CategoryID/15/List/0/SortField/0/Level/a/ProductID/355/Default.aspx

If you need more I/O then you can use the surface mount version that has more pins.

http://www.parallax.com/Store/Microcontrollers/SXChips/tabid/138/CategoryID/15/List/0/SortField/0/Level/a/ProductID/354/Default.aspx

Or try using the BASIC Stamp computer system on a board.

http://www.parallax.com/tabid/214/Default.aspx

For prototype work check out the system below:

http://www.parallax.com/Store/Microcontrollers/BASICStampModules/tabid/134/txtSearch/28138/List/1/ProductID/123/Default.aspx?SortField=ProductName%2cProductName

http://www.parallax.com/Store/Microcontrollers/SXTools/tabid/139/CategoryID/17/List/0/SortField/0/Level/a/ProductID/494/Default.aspx

The programming software and a BASIC compiler are all free downloads from Parallax's web site.

For keyboards and LCD displays look at:

http://www.parallax.com/Store/Components/Other/tabid/157/CategoryID/32/List/0/SortField/0/Level/a/ProductID/194/Default.aspx

http://www.parallax.com/Store/Microcontrollers/BASICStampModules/tabid/134/List/1/ProductID/55/Default.aspx?txtSearch=lcd+displays&SortField=ProductName%2cProductName

Here is a whole collection of LCD displays coving a range of price points.

http://www.parallax.com/Store/Accessories/Displays/tabid/159/CategoryID/34/List/0/Level/a/Default.aspx?SortField=ProductName,ProductName

If you have a need to do a fair amount of floating point math then check out the math coprocessors for the microcontrollers.

http://www.parallax.com/Store/Components/IntegratedCircuits/TimeMathCoprocessors/tabid/617/CategoryID/82/List/0/SortField/0/Level/a/ProductID/244/Default.aspx

http://www.parallax.com/Store/Components/IntegratedCircuits/TimeMathCoprocessors/tabid/617/CategoryID/82/List/0/SortField/0/Level/a/ProductID/401/Default.aspx

I think that you'll find everything you need available from this one source for the project you have in mind. I have the professional prototype board, floating point processor, a 2 line LCD display that plugs in to the prototype board and several of the SX28 chips myself. I'm still waiting to get the USB programming key. Right now I have to barrow my friend's serial version of the programming key to try out some design ideas.

Did you look at the B-H curves for the material you're using? Any magnetic material will be non-linear to some degree. Normally the lower the peak flux density you operate the material at the more linear the B-H curve. Generally ferrite will have lower losses compared to powered iron. However powered iron has more tolerance to small DC bias in the core without saturating the material. Which brings up another point you should not operate the core with a DC current flowing through the winding if you can avoid it. The best you can do is find the combination that provides the inductance you need while operating the core material at the lowest flux level you can get away with using which tends to suggest using a high permeability material using the least number of turns to get the needed inductance. The flux density is

proportional to the number of turns on the core and the current in the wire
(ampere-turns which is the "B" field on the B-H curves). As you noticed the
higher permeability material seems to work better, that 's what I would have
expected. That's my 2 cents worth of advice.

I built one just like that using a 14A7 loktal tube (same as 12SA7).
Mine wasn't crystal controlled, I used an oscillator coil from a BCB set
tuned with a 365pf variable to set the frequency, and a 2.5mh rf choke
in the plate. Worked great.

I also went 'high power' with a 2 tube bcb transmitter using an 6F6
oscillator modulated by another 6F6 (250v on plates).

Here is the schematic for a 35, it should ve similar to the 20 except for
an extra pass transistor or two.

I modded one of those significantly. Too long ago to remember the exact
thing I did, but DO put that crowbar SCR anode on the collector of the
pass transistors. If it trips as is, you kiss the current meter and
expensive current sense resistor goodbye.

Cheers,

If you will install a 2500 ohm pot between pin 5 and 6 on the
regulator chip ,that will give you variable output.. I agree with the
use of the crowbar circuit, saves damaging your equipment and damaging
the power supply too.. GL   W4PQW

While the output voltage of practically any regulated linear power supply can be varied by changing one or two resistors, one should remember that the power dissipation in the series pass transistors will increase significantly, if voltages much below the nominal voltage is required, thus you may have to increase the number of series pass transistors or at least increase the heatsink surface 2-4 times the original.

Also you may have to use some foldback current limitation system to keep the series pass transistor dissipation at a reasonable level e.g. when driving car head lights or other nearly short circuit loads.

When fully understanding these issues, the commercially available devices can be quite interesting building blocks, when creating power supplies for your own needs.

On May 3, 9:17 pm, "Leland C. Scott" <kc8...@arrl.net> wrote:

> Did you look at the B-H curves for the material you're using? Any magnetic material will be non-linear to some degree. Normally the lower the peak flux density you operate the material at the more linear the B-H curve. Generally ferrite will have lower losses compared to powered iron. However powered iron has more tolerance to small DC bias in the core without saturating the material. Which brings up another point you should not operate the core with a DC current flowing through the winding if you can avoid it. The best you can do is find the combination that provides the inductance you need while operating the core material at the lowest flux level you can get away with using which tends to suggest using a high permeability material using the least number of turns to get the needed inductance. The flux density is proportional to the number of turns on the core and the current in the wire (ampere-turns which is the "B" field on the B-H curves). As you noticed the higher permeability material seems to work better, that 's what I would have expected. That's my 2 cents worth of advice.
>
> --

I had no particular interest in looking at the B-H curves, since it's distortion in filters I'm interested in, and that's easy for me to test directly.

With respect to flux density: there seems to be a bit of a disconnect between what I know and what you've written. From Faraday's law of magnetic induction, I expect that for the same inductance with fewer turns, the flux density must be higher: if the inductance is the same, the voltage must be the same for a given current at the test frequency. The same voltage with fewer turns around the same cross-section core implies higher flux density. No?

So far, my tests suggest that you can't draw any conclusions one way or the other from only the relative permeability of the core material. Ideally, you should do tests in the actual application. My testing is slightly derailed (I hope temporarily) because the cores I got that were supposed to be FT50-67 are clearly something different, almost certainly FT50-61. I am testing all the other low-to-medium permeability (F)T-50 cores I have available at the moment.

Cheers,
Tom

Thanks all; I have been getting a lot of great suggestions. I will
whittle them down until I find the hardware I need and then order up an
evaluation board to practice on. I also note that some of the vendors
offer training nearby, so maybe I will go in for a class once I figure
out how to write a few lines of code.

> test directly.

Looking at the B-H curves will save you the trouble of testing core material that is obviously non-linear. If the B-H curve is perfectly linear there would be no distortion in the signals. Some material from just a quick look at the curves would eliminate them from consideration without the time wasted testing them.

http://www.ferroxcube.com/appl/info/3B46.pdf

>
> With respect to flux density: there seems to be a bit of a disconnect between what I know and what you've written. From Faraday's law of magnetic induction, I expect that for the same inductance with fewer turns, the flux density must be higher: if the inductance is the same, the voltage must be the same for a given current at the test frequency. The same voltage with fewer turns around the same cross-section core implies higher flux density. No?

With all things being equal that's true, however not all core material reacts the same. As you can see from the link above things are a bit more complex than they at first appear. Somebody could do a PhD thesis on the subject of designing low distortion magnetic components.

http://info.ee.surrey.ac.uk/Workshop/advice/coils/mu/

>
> So far, my tests suggest that you can't draw any conclusions one way or the other from only the relative permeability of the core material.

I think it's worth another look myself.

Ive modified a couple of these(similar) power supplies by doubling the
the number of pass transisors. In the process I also double the value
of the emitter
resistors. If they were .05 I make them .1. Seemed like a reasonable
thing to do. Any opinions?

Geez, I never thought about the SCR but you are right. While I have
added crowbar circuits and placed them before the pass transistors I
hadnt noticed that this connection on these power supplies needed to
be relocated.

Yeah, go 0.1 ohms. The 0.05 ohm resistors are useless for practical
purposes.

And there should be a fuse in there to blow between the filter cap and crowbar.

The supply was actually 3rd world designed and made I swear.

Cheers,

The diagram looks strange to me, with a direct connection from the
higher voltage driver supply (e.g. pin 12 of the 723 or collector of
Q2) to the base of the series pass transistors.

With a higher separate driver power supply the driver current should
flow through the Q2 driver transistor, through the small resistors
into the base connection of the series pass transistor. Thus in the
diagram the direct connection from the driver supply to the series
pass transistor base should be removed.

>I modded one of those significantly. Too long ago to remember the exact
>thing I did, but DO put that crowbar SCR anode on the collector of the

>expensive current sense resistor goodbye.

When using crowbars, there should be a some kind of fuse on the
feeding side, preferably immediately after the filter capacitor.

If the crowbar is before the series pass transistors, it is a good
idea to put a large reverse biased diode across the series transistors
(CR7 in the diagram), which would discharge any large capacitors on
the regulated side through the crowbar. Without the diode, the
collector side would be at 0 V after the crowbar tripped, but the
emitters could still be at +12 V due to any large capacitors on the
regulated side.

Changes followed by "|".

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

 radio/personal-intro
 Subject: Guide to the rec.radio Newsgroups
 Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
 Last Posted: 9 Nov 2001 06:18:17 GMT
 Posting-Frequency: 15th of each month

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval.

This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to
rec-radio-info-request@panix.com.

After reading all these posts, the modification is likely over my head. I think I'll sell it and find a nice used variable supply. Thanks for all in the input.

Better yet, put in a Resettable Circuit Breaker, as you can never find
the right fuse, and they ALWAYS blow at the worst possible moment.....

The 12BE6 being a mixer/converter could be a good choice for the RF
oscillator and an audio stage to mix with it? 12BA6 is an RF/AF
pentode (vari mu?).
Searching for circuits using 12BE6 etc.
Those tubes IIRC have 0.15 amp heaters. One way to heat them, on 120
volts AC, without using a transformer is to series the heater with a
capacitor across the AC line. Since the heater voltage is such a small
percentage of the total to be dropped you can for practical purposes
ignore a vector diagram/calculation. (R and C vectors etc.) Viz:
120 minus 12 =3D 108 volts (to be dropped)
Capacitor reactance (Xc) therefore 108/0.15 =3D 720 ohms
Xc =3D 1/2pi x sq. root F x C
At  60 hertz a one mfd. cap is 'about' 2800 ohms.
So 'roughly' an AC rated 3 to 4 mfd. motor starting cap (or
equivalent) will work transformer-less.

Hello-

I recently picked up a used IC-718 real cheap. To the extent that outward appearances matter, this thing looks nearly brand-new.

However, I was not able to get the power cable... no problem, I thought, I'll just make my own.

Well, the connector on the back looks like something Molex might make, but I haven't been able to confirm that, or determine what the part number would be.

I spent some time at Molex's web site, and some time at Mouser's, and while I've found similar connector shells, nothing matches. I'm beginning to wonder if the connector was custom-made for ICOM.

Anybody know where I can find the connector I need?

Pete

A subject that has been getting under my skin recently.

The proper name for specific tubes

It seems that people, even the manufacturers can not figure out exactly what type of tube they own, are selling, or even producing. You have various people call the exact same tube all of the above (Beam power tetrode, beam power pentode, or pentode). You have manufacturer data sheets calling it something that on actual inspection, it is not.

For example. The tubes..

6AG5

6AH6

6BC6

6CB6

6GM6

6BZ6

...(on and on)..

Second section of..

6AM8

6GH8

6U8

...(on and on)..

All of them have an electrode structure that upon close inspection that looks like/is a beam power tetrode. But the sales pages, and even the datasheets call it a pentode. The datasheets show it with a suppressor grid, where it actually has beam forming plates. What gives?.

You have a few people that have determined what they actually are by direct visual inspection, and actually call them what they are, but that is few and far between.

Is it just that the curves are close to a pentode, so the manufacturers are trying to avoid confusion to the average end user?

And as far as people calling them beam power pentode, unless they actually have three grids, and beam forming plates, then I don't consider it to be a beam power pentode.

Is it just a big international conspiracy to confuse me?

RCA did the right thing: they always called their tubes "beam power tubes", completely sidestepping the tetrode vs pentode terminology.

I think RCA was careful to not call them "beam power pentodes" because some European company held European patents on power pentodes with similar beam-forming plates. I think RCA was trying really really hard to not have them identified as pentodes. Licensing and intellectual property rights to tubes' innards was something that companies were really protective of - look at the wording on the flap of any tube box up through the 70's to see some legaleze.

Although my gut feeling is that they are actually pentodes (maybe if you don't run the beam/supressor grid out to a pin it doesn't count as an electrode?) because those beam forming plates gotta be a tube element.

The ARRL (almost) always drew beam power tubes like 6146's and 807's as tetrodes and classified them as tetrodes in their tube charts. You will note that 6146's and 807's don't run the beam/suppressor grid out to its own pin but make it share the cathode pin.

Tim.

I assume that the 718 uses the same 6 pin, Molex-looking plug that most recent HF radios use. Digikey has a Molex connector similar, but not quite the same. An Exacto knife can make it fit, but a better bet is to go to a place like Tower Electronics who sells these connectors as a generic HF Radio power plug.

At http://www.pl-259.com/page4.html they call it a "Kenwood, Icom & Yaesu 6-pin DC plug, with 4 pins & boot"

..

LOL - Sorry. I don't want to build a 455Khz transmitter. The reason for
the post was to simply identify the coil in the picture. It has been done.
Thanks.

Think about a magnetically-deflected TV picture tube.

I noticed the problem, when my Eico 753 (around 1968) worked
fine when the power supply was on the right side, but had
a rough hum reported by other stations, if the power supply
box was moved to the other flank.

Hi all,

for those of you interested on high performance analog front-end I have the pleasure to inform that Martein, PA3AKE, has just updated his website.

Please look at the following:
o Front-end Board
=84X H-Mode Mixer
=84X Roofing Filters
=84X   SSB
=84X   CW

in particular the release of the front-end board with additional 500Hz CW roofing filter. This update is complete with schematics, part list, PCB artwork and last but not least extensive performance measurements.

http://www.xs4all.nl/~martein/pa3ake/hmode/index.html

Enjoy the visit and reading

I hate to say this, but if you want to measure continuity of a wire or
a coax center conductor, you use the OHMS function. [sigh...]

The ohmmeter function doesnt tell you which end is bad.
I use this on LAN jumpers mike cords, foot switches,coax connectors, cannon
plugs...
where the cable is known to be open but the question is now just which end.
Gee I thought I was clear on this. [sigh...]

Jimmie

I never measured a Variac before.  Might be higher than you were looking
for.  That's variable for sure.  A good thing to have around the shop.

This coming Sunday....
the Season's First.... FLEA at MIT

****
****

Summary: Buy Sell SWAP   Ham Radio   Electronics Computers   9AM - 2PM

*** !!!! In our Traditional GARAGE and the adjacent lot !!!! ****
so come rain or shine or super heat the Flea is on !!!

!! ** More Buyers PARKING is available ** for details see
http://web.mit.edu/w1gsl/Public/flyer

<FF>
********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday April 20th 2008
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $5 (you get $1 off if you're lucky enough to have a copy of our ad) and sellers spaces are $20 for the first and $15 for each additional at the gate.

The flea will be held on Albany between Mass Ave and Main streets in Cambridge; right in the Kendall Square area from 9AM to 2PM, with sellers set-up time starting at 7AM.

SEASON PASS + Advance Seller Discount

A sellers discount season pass is available which offers a 30% discount. By prepaying you get a discount and earlier admission. See the registration form.

*** Attention Sellers ***

Prepaid vendors.. Season Pass or monthly, will be admitted FIRST.
Separate lines will form prior to gate opening for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered well illuminated tailgate area is available for all sellers (6'8" clearance).

The adapters are per radio, and radios like Icoms with RJ45's have RJ45's on
the adapters. However, if I recall, OP had two mini plugs. Seems like the
Heil adapters have a mini and a 1/4"

..

Its been a long time since I used a 7360 but I did it exactly as you
described.
I used a toriod broadband transformer to feed the 7360 deflection plates
because I didnt want to have to switch in tuned circuit.
The band switching arrangement was cumbersome enough asit was. This was the
front end for a rx project I never finished. It did seem to work pretty well
when used it as a rx converter in front of an old Halicrafter radio.

Jimmie

Don't get all bent out of shape because someone comments on your post.

Please get your attributes correct on who said what.

>The ohmmeter function doesnt tell you which end is bad.

Absolutely true but with a conditional (see below).

What is lacking is the METHOD and WHY it works. It can be said this way:

Cables all have distributed capacitance between conductors. Wire PAIRS, shielded from all other pairs in a cable, can usually use manufacturer's specs on capacity per hundred feet to locate a break or an open by measuring the capacity at one end.

1. If the capacity measures very low, the break is at that end.

2. If the capacity measures to the nominal value for that length, a break COULD be at the OTHER end...or it is really a good cable with no break. Only an Ohms test could determine which condition would apply there.

3. If the capacity measures somewhere between very low and nominal, the break is SOMEWHERE along the length of the wire pair.

For short wire pairs of 20 feet or less, (3) might not be useful.

One can generate the value of capacity per whatever length by measuring a good wire pair run and recording it for future checks.

The telephone folks have been measuring line pairs for at least a century, all without measuring any capacity of wire pairs, using only resistance. That's an extreme case since a loop to a central office can be as long as 5 miles.

At Rocketdyne Division of Boeing Aircraft Field Test Labs in the Santa Susannah mountains west of Canoga Park, CA, the 'Coca' space shuttle Main Engine test stand has a 1200 foot interconnecting tunnel from the engine test stand to the control blockhouse. Hundreds of wire pairs are laid in that plus at least another 400 feet (give or take) from each end of the tunnel to sensors and recorders. Techs there have been using the capacity measurement technique on wire pairs since at least 1980 (when I visited there first time). There are dozens of splices along each wire pair run, most being changes in sensor functions for various engines. Another extreme case, yes, few homebrewers will be making rocket engines with a ton (plus) of thrust. :-)

>I use this on LAN jumpers mike cords, foot switches,coax connectors, cannon
>plugs...
>where the cable is known to be open but the question is now just which end.

When it comes to MULTIPLE WIRE conductors in any cable, a capacity measurement is only approximate. Ideally, all other wires except the one being tested should be connected in common. If the other wires are 'floating' (unconnected to anything), they may or may not ADD to the capacitance of the test conductor to a local common. There is great variation on cable lay-ups (positioning within the cable bundle) and thus the distributed capacities will vary.

In cable assembly production testing, it is common to use a standard test fixture of matching connectors with each wire forming a giant conductive loop, a single wire that can drive an indicator or meter or buzzer for continuity. Over 90% of such cable assemblies will pass on the first test; the rest go to QC techs who inspect more closely. Yes, that is for production, not single cable checks.

Not all DMMs have built-in capacity measurement functions. A Simpson 260 doesn't. I have three DMMs but only the 4 1/2 digit one has such a capacity function. I use an old Data Precision handheld capacity meter or Neil Heckt's handy AADE L-C Meter for measuring capacity down to +/- 0.1 pFd resolution.

Coaxial cable is quite another story but a gross, low-frequency check can be done using just a capacity measurement...PLUS an Ohms check with or without a short or 50 Ohm dummy load at the other end. That short or dummy load uses the outer conductor as the return/common, avoids needing to run a common wire for Ohms continuity checks. To get a fairly accurate location of a coax cable break or short, an RF check can be done using minimum and maximum impedance magnitude versus frequency (and thus wavelength if the velocity of propagation of the coax cable is known). See Ham Radio magazine, May 1978, for quick calculations on a scientific pocket calculator that doesn't require a Smith Chart to use RF bridge data.

I want to homebrew a crystal controlled (or VXO) CW Tx, (capable of break-in operation) that employs a 2E26 tube in the PA. With ICAS operation I can get 27 watts of RF out with a driving power of 0.17 wattts (according to my RCA sheet). I want most of my "design" efforts and interest to centre around the PA stage. I think I could cope with that at least.

Can anyone please point me to a suitable solid-state exciter circuit? I want the Tx to cover any HF band (I'll use plug-in coils). TIA.

Why solid state? Since you're using the 2E26, you already need a high
Voltage supply, and a single stage crystal oscillator can operate from the

same supply without the need for a low Voltage supply for a multistage solid state exciter. (It's gonna take more than one to get where you want to be.)
A tube crystal oscillator can be found in most old ARRL handbooks, using a 5763 or similar tube. Or, even a 2 stage oscillator buffer/multiplier utilizing a triode/pentode 6EA8 or similar.

IIRC, most any 'simple' 6146 transmitter can be adapted to the 2E26 --
with minor changes in high voltage and grid bias.

The ARRL Handbooks from circa 1955->1975 seemed to always have
a "75 Watt Novice Transmitter" project.

In the fall of 1971, there was a two part article in QST for what may have been the ultimate CW transmitter. It was solid state up till the driver, a 6GK6, and then a pair of 6146's. It used the uncommon design, for a cw transmitter, of a VFO that covered only a fixed range, and then it was mixed up to the signal frequency. I'm working from the 1972 Handbook, but I seem to recall the two part nature of the original had the first part as a simpler version that was expanded in the second part.

But any existing solid state transmitter is going to put out more than you'll need for the 2E26. Just pick a low power one and build it.

QRZ.COM "W0IYH" has a picture of my new book "Discrete-Signal Analysis and Design".

It is intended for class-room students and advanced at-home experimenters with strong interests in undergraduate-level mathematics. It discusses in a conversational style an introductory (see page 2) tutorial coverage of many aspects of the title subject. The book includes a compact disk that contains a virtually-free copy of the world-famous and very sophisticated program MATHCAD, version 14.0. This program can be used in a very elementary mode at home by new beginners and also in a very advanced mode by mathematically-sophisticated engineers. The software has a perpetual lifetime, and can be used "forever" for a multitide of applied-math calculation projects. Familiarity and acquired skill with the math program can in themselves be a very rewarding experience. The program has excellent graphing abilities, and the results can be printed, archived and published (and e-mailed) "forever". An on-disk "Mathcad User Guide" helps us to get started.

Page one of the Introduction Chapter contains the following:

"We can never become too well educated about fundamentals and about our aiblity to view them from a mathematical perpective. The modern emphasis on math literacy is right on target."

This is the main idea of and the basic reason for the book.

See the Wiley website www.wiley.com for more information about the book and the suggested list price. Other online bookstores may have the book-plus-disk at a reduced price. Be sure that the disk is included in the price.

I'm minded to have the PA valve input circuit have an impedance of 50 Ohms.
I need to fiure out then what the input circuit for the 2E26 would look
like. I've no idea at the moment, not being much of a homebrewer at present.

One other thing. The reason for my post here about my new book, and also the review on page 70 of the May 2008 QST, is to convey information that might be interesting and valuable to some of the members of this group and to QST readers. It is not motivated by a search for financial profit, even though the publisher does pay a small royalty to the author. That total amount is insignifiant compared to the author's substantial personal investment in time (time is not free) and materials over a three year interval.

Hello K,

The Mathcad program itself sells for several hundred dollars. The PTC Company publishes this program, and it alone is quite expensive. The disk in my book is part of a promotional plan by PTC to encourage the sales and use of the Mathcad program. Even if the book itself is of no value, which I do not believe, the Mathcad is of considerable value. Go to www.PTC.com if you want to learn more about Mathcad.

I have Mathcad 4.0; would it be sufficient? If so, is the book available separately?

Michael

Hello Michael,

Mathcad 4.0 was sold in 1993. I had it at that time (15 years ago) but it is very ancient these days. If your computer is fairly modern and has a CD drive, I suggest "bite the bullet" and get the book with the almost freebie version 14.0 program attached. If you are using a very early computer that has no CD drive and if your version 4.0 works OK, you could try it. I believe it is possible to get the book alone. I personally would not want to waste my valuable time with that approach. Also, the CD has the Mathcad User Guide, which is very useful. I can't emphasize too much the excellence of the new 14.0 version.

Sad part is that courtesy of the IRS rules, it is a gamble to publish a small run, specialty book like this at that price. Used to be different, but that's the reality now. In any event writing one is more a labor of love than anything else unless you need the publication to get tenure.

I haven't seen the book and wouldn't buy it because I've been doing this stuff for 25+ years and already have dozens of books on signal processing. But if you don't have that sort of background and are interested in software radio, you really need this or something like it.

There is no substitute for doing the math yourself.

Table of contents looks good though I wonder if it's not a proposal outline that Wiley has failed to update rather than the actual table of contents. "Discuss the MathCAD program" doesn't seem like a good section title.

Have Fun!
Reg

First of all, allow me to add my congratulations to you, Bill, for publishing a new book. It sounds like a valuable addition to both professional and amateur libraries.

Just so one knows, just what are the limitations of the included Mathcad program. Is it somewhat like a 'student version' or 'promotional version' that is limited in the number of steps or number of variables that can be programmed? Or are the limitations more exotic, such as not supporting regression analysis and that kind of thing? Not that such a limitation would be a show-stopper. One may learn a great deal from student copies of programs like PSpice. It's just that it would be nice to know this going in.

Jim, K7JEB, Glendale, AZ, USA

The recent thread discussing W0IYH's new book got me researching Mathcad version differences and availability of add-ons; I found essentially nothing on the 'net that summarizes versions differences and suspect that reading the release notes from each version would be required to do the job. Has anyone seen such an analysis?

I have version 4.0, and from reading archived newsgroup posts it seems that 4.0 and 5.0 were highly regarded, with increasing complaints arising after 6.0. Worksheet (.mcd) file formats were ascii until 7.0, and evidently more recent versions are xml based (do these no longer use a binary file format?) I would like to continue to use 4.0, and I also appreciate that this version is unencumbered with intrusive protection schemes (I choose tools that are designed to work for me and not against me), doesn't need a mysterious installation procedure (just execute the product from its target directory), and has a small footprint but is not memory constrained. Has anyone ever documented the ascii worksheet file format (which could permit a re-writing of later version files to be backward compatible with earlier versions within the constraints of common features)?

Does anyone happen to have the DSP "function pack" compatible with 4.0? As described in advertising literature that came with my version, it offers some excellent filter design tools that would provide interactivity missing from the tools that I've been using, and I would enjoy trying them ;)

Michael

I need some information on an appropriate input circuit for a small RF power amplifier using a 2E26 operating in the HF region. Output would be about 27 watts. Drive input power about 0.12 watts.

I want the input circuit of the PA to present a 50 or 75 Ohm load to the driver (the exciter - probably a CW QRP rig - will supply about 0.12 watts). Perhaps (I muse) it would be good, (certainly it would be convenient) if the input circuit was NOT a tuned input circuit, but see below.

Questions (that incidentally show my thinking):

Can anyone point me to a website that gives the design data for an appropriate circuit given the things I have mentioned?

Is it okay to have an untuned grid circuit? I muse no problem if the exciter has a pi-network output circuit. I just wonder that if the exciter uses a pi network, if that would represent both the exciter anode/collector tank circuit, and the grid tank circuit. (So, really there would be a tuned input circuit - the output pi-network of the exciter). (Just shows I know nothin', I'm not even certain whether solid stage rigs use Pi-networks to match with the load).

Any thoughts on biasing arrangement - fixed bias, drive bias, or cathode bias? (Perhaps fixed bias is best - no need for a clamp valve). Grid bias needs to be about - 45 volts. Muse that a simple RF choke supplying the bias to grid would suffice.

So, basically, I want to be able to plug a QRP rig into the PA, tune up the QRP rig and the plate circuit of PA, and that's it.

Elsewhere you say that a 2E26 needs 170mW, here you're going to give it 120?

If you want to minimize the drive power you're going to have to use a tuned grid circuit; having such a power-efficient design is going to make your circuit susceptible to oscillation, as it'll take less than 1% of the output power to come back in to the grid circuit and cause problems. So a 120 (or 170) milliwatt input implies both a tuned grid circuit and neutralization.

If you want to go broad-band, you need some dissipative elements in the grid circuit to broaden the response. Something like a plain old resistor would do quite well. With resistive loading, your grid circuit will both be broader band _and_ your need for neutralization will be far less. I'd be tempted to think along the lines of a 1W QRP rig and resistor in the grid circuit that dissipates 800mW. I'll leave the calculations to you, but this will broaden your grid circuit response considerably, ease your bias network design problem, and reduce (or eliminate) the need for neutralization and/or obsessively high degrees of isolation in your circuit layout.

Have fun -- take everything I just said with a grain of salt, because I've only ever designed transistor PA stages.

William,

Given that Mathcad is included, I don't think the price is unreasonable. However, perhaps you'd consider using one of the free math manipulation programs such as Octave in the future? It really would make it more accessible to amateurs. Nevertheless, thank you for writing the book and getting it published -- it definitely will help some people and is a good addition to amateur radio literature.

At least Mathcad is much cheaper than Matlab. The MathWorks (publishers of Matlab) has pretty much completely left out the hobbyist community... the full version of the software is quite expensive (thousands of dollars), whereas the "student" version (at a pretty reasonable $99, although each and every "toolbox" is then an additional $59) require formal proof of student status, which of course hobbyists generally don't have. :-(

I haven't, but I can tell you that version 12 was still just an "enter the product code and it works anywhere" whereas by version 2001 it required Internet activation (presumably with a finite number of activations -- not good if you upgrade computers regularly and and to keep it for awhile).   (The versions went 12, 2000, 2001, 2001i, 13, and now 14, AFAIK.)

The biggest improvement for me between version 12 and 2001 was that they let you have scales on both the left- and right-hand sides of a graph. There were of course other new features and what-not, that's just the only one I remember caring that much about!

The change to an XML file structure (it's ASCII-readable) allows for easy searching of MathCAD files and -- ostensibly -- being able to parse, convert, and create your own MathCAD worksheets programmatically, at least if they actually documented the structure ("schema") reasonably well. (Some companies change to XML just to satisfy some big corporate "checklist" of features required of software and don't publish -- or incompletely publish, as with Microsoft Office -- their schemas.)

=========================
Tim ,If I understand the above correctly you refer to a passive grid
circuit with for example a 200 or 300 or 600 Ohms non-inductive resistor
and a toroid type of auto-transformer .

With the exiter output impedance being 50 Ohms , the auto-transformer
impedance step-up would have to be as follows ;
For the 200 Ohms resistor 1: 4

For the 300 Ohms resistor   1: 6
for the 600 Ohms resistor   1: 12

The resistor to be chosen would be able to swing the grid voltage sufficiently to drive the tube ,which would have a set negative grid voltage for whatever Class the tube will operate eg class C , AB or even A ,all that for the exiter power available.

Such a passive grid scheme can be found on the web site of AG6K.

FYI: THe 2E26 is a good small rugged tube. It was used as final in the Spy Sets used by the clandestine community in the cold war days. I have one of the sets, and it will literally tune into anything and work off almost any power source. It is crystal controlled, but I don't have any schematic.

One of the older ARRL workbooks will have lots of circuits for the 2E26 tube, circa 1950-1960.

I checked the two Motorola databooks I have, one from about 1978 and
the other from 1990, and the IC doesn't show up there.

I looked because I had thought some odd-numbered devices for tv

showed up, but nothing. I checked my 30 year old National
databook too, but nothing there either.

Sorry, this turned out to be only a bit of an old Euro Master
Selection Guide. However, there are more clues to be found
in the datasheet for the UAA2022 (which wasn't easy to find
online either):

http://www.uploadarchief.net/files/download/uaa2022.pdf

(UAA2000/2001 is mentioned in the description)

I see that EI9GC uses passive grid in his PA.

http://homepage.eircom.net/~ei9gq/amp.html

Also, I just discover the RF Amplifiers group at Yahoo. Will join that.

Tahnks Michael for your efford, but that was the only doc
I could find bofor on this ic while looking in the web.
Unfortunatelly without to much information in it about the
mentioned chip.

I imagine that you have considered it, but it is still worth
mentioning: The device seems to have been popular in about
1986; peruse Sams Photofact TV folders from that period for
TVs that have a 7-segment channel display and see if they
use the UAA2001/UAA2022 combination -- the schematic should
provide connection and pinout information and some clues
on using the device.

Michael

Hi Michael,

I'm sorry for causing additional effort in searching
for the pin out, but I had found some of these ic's
on a jumble sale and would like to play around with
pll syntheses on a rainy weekend if the ic is suitable
for this purpose.

Many thanks in advance for your kind help.

Check the first URL that I posted in reply to the O.P.; you will see that this device is included in a 1986 Motorola Euro Master Selection Guide.

I always thought that was a Toshiba part.

80's era TV and VCR tuners are most interesting, IMHO, used as the tin-can modules. If the TV is still functional you can usually figure out the header connector functions with a voltmeter or even a logic probe - no need to dink around with pinouts.

Do modern TV's still have the tin-can tuner modules, or is it more highly integrated these days? Of course a modern TV isn't an analog TV anymore either...geeze, it's been at least a decade since I tore into broken TV's and VCR's for parts, I gotta start doing it again! If we're lucky there will be a huge flood of older analog TV's for scavenging soon.

Tim.

I cobbled up a two transistor oscillator, essentially copied from an
Atlas 210 Transciever schematic, to run the BG9D I got on Ebay while
back. The circuit is here:

http://novatech-instr.com/Fun/Crystals/bliley_q.jpg

I took an old octal based capacitor, emptied the insides and wound 106
turns (53 bifilar) of #27 wire on the aluminum case. This is the
heater. About 1 amp heated nicely to 70C. I used some hot-water pipe
insulator to cover it. An LM61 is used as a temp sensor. (epoxied to
the can) (I'll put up the temp controller schematic when I remember)

It is hard to set much closer than about +/-1ppm (needs a better
multiturn capacitor), but it is stable (short term) to better than
+/-.01ppm. That's pretty nice, but other than the fun of building it,
the performance is pretty useless. Roughly the equivalent of building a
crystal radio set.

I am going to replace the transistor with a 12AT7, just for show, and
call this little experiment done.

Steve.

Hello,

I am in the process of choosing a technology for a crystal filter in that frequency range. I am facing the choice of buying a filter and paying the price, or to build a filter myself.

The questions I am facing are these:
1) Do the MQF (Monolytic Crystal Filter) withstand high level signals, like 1 mW or more, and what is their shape on the frequency domain (do they go steeply down and do they have parasitic responses) ?

2) I am actually ready to try one of the lattice crystal filters as described by Rhode in his may 1981 article (I can send you a copy for the asking), where there are 4 crystals in 2 pairs separated in frequency by about the 2 thirds of the desired passband. I would find the crystals by sorting out batches of crystals on the frequency meter. One can put 2 of these filters in series separated by a 1-dB resistive pad (8 crystals total). Any experience to report on these filters?

3) How good are ladder filters with overtone crystals? I do know that ladder filters with such crystals are excellent on their fundamental (3rd overtone crystals), but can you have them filter on the overtone, with a tuned circuit up front ?

Thanks for the comments
Jean-Daniel HB9AKQ

It's quite easy to buy 40 MHz fundamental crystals, which could be
used for a ladder filter.

Are you hoping/expecting to get a narrow filter out of this, or will
it be a roofing filter, with the real selectivity at a different frequency?

I thought there were limitations on selectivity at those frequencies.
I can't recall ever seeing a narrow filter up there (and while it's been a
long time since I read that QST article, which is the only article in
the ham magazines that I've seen about making crystal filters that high
up, I thought it addressed that issue).

If it's just a roofing filter you need, you can pull one out of an older
cellphone. The big clunky kind have parts that are recognizable.

Oh, I'll check that out, the highest I saw was around 24MHz at 1mW,
but I also quite a few at Digikey's going to 50MHz,but I do not know
if they are overtone or not. In any case they withstand only 50 or 200
uW, which is not enough for an up-conversion roofing filter that gets
dBm galore

Hello, I need a roofing filter with a few kHz wide that can withstand
1dBm or a little more.
I am not sure that the MQF you find on the market or in older
cellphones can do that. The frequency should be between 45 and 80 MHz
and the price should be right. What is your experience on this?

Thanks
Jean-Daniel HB9AKQ

Pretty good, but not my idea of big files. That starts with very full
CD images and up. I do not bat an eye at downloading full multiple
DVD distributions of Linux. I have dual layer rewriters and media as
well.

The power ratings on crystals are their allowable _dissipation_, not the amount that can be going _through_ them. So you want to look at the amount of power being lost in the filter to estimate capabilities, not the amount of power being dissipated at your load.

But then it's not really a roofing filter.

That term applies to a filter used after the first mixer to limit
the passband but which doesn't provide ultimate selectivity.

My point was that I wonder if you can get a few KHz of selectivity
up there. Otherwise, we'd surely see it in commercial equipment

and even home made. All the design books decades ago would say the
best design is to put the ultimate selectivity right after the first
mixer of a receiver, yet as receiver design changed to put the first
IF in the 45 to 70MHz range, I've never seen an instance of a narrow
filter right after the first mixer.

I don't know whether it can be done, but the fact that it isn't done
suggests there are limitations.

The filters in a cellphone would be wide enough for FM, and given that
all the cellphones I've seen convert to a lower frequency where there
is another filter, they probably are relatively loose filters up at
45MHz or so.

Michael,

I am not up on this, but I believe narrow BW roofing filters are now
being marketed for many rigs. InRad has some, and I am pretty sure
TenTec offers them.

Pete

Pete,
The Ten Tec Transciever filters are at 9 MHz except in the "general
coverage up convert" receivers. in which case they are not narrow at
all.

Note that INRAD offers roofing filters 4-5 KHz wide at VHF frequencies
from 40 to 73 MHz (see page 13 of their catalog) with i/o impedances
of 50 ohms : http://www.inrad.net/inrad.php?mode=catalog

Thanks Ed, I haven't kept with this at all. The INRAD 4 to 5 kHz BW roofing filters sound very interesting though. A lot better than the 18-kHz BW 40.455-MHz monolythics I've played with in the past.

Pete

Looking at how I would configure a 7360-type mixer in the front end of a low-band (say 80M and 40M) receiver.

Method A: To me, the most obvious way to do it is to feed the RF into the 7360's grid, and feed the deflection plates with balanced local oscillator input at circa 10 or 20 V P-P. Put a center-tapped transformer to the anodes and pull the output out of a winding.

BUT... that's not what I see being done in the various app notes.

Method B: I see, for example, feeding RF into a single deflection plate, and putting a pot for fine-tuning the balance on the other plate. LO is injected into the 7360's grid. (e.g. page 6 of http://www.ab4oj.com/1st/hb/7360/7360.pdf). I think the intention here is not to saturate the deflector beam inputs into switching mode, but to keep the amplitudes small where it'll be linear.

What's the advantages and gotchas of doing it each way? Method A takes a lot of LO amplitude and has the highest gain for the RF. Method B takes less LO amplitude but I think has lower gain. Method A cancels out the LO, and Method B cancels out the original RF. Right?

Of course two 7360's would let me do a doubly-balanced mixer... can't afford 7360's but I do have some 6AR8's!

Tim N3QE.

I wonder if anyone knows of a really small soldering iron (half the diameter of the Antex 12W iron). I have one I purchased in USA about 20 years ago and the element has now failed. As the manufacturers name has worn off the handle I am at a loss as to where to get a replacement. A search of the web has proved fruitless. It is the only iron I have had that can fit between other components or in very confined spaces when replacing SMD resistors etc.

Original iron:-
Overall length handle and bit 145mm (5 1/2")
Handle diameter 9mm
Shaft (element) diameter 1.6mm
Bit maximum diameter 3mm
Bit tip approximately 0.5mm - may be less.
Supply 12V

Why not take a peek at the old Sanders articles that ran in the 1960s in
QST? Or, take a lot at the schematics for the Squires-Sanders RX on
BAMA for some real world applications.

Pete

Hello, to you all who answered this thread lately,
I learned quite a lot, although I knew part of it.

What I can see is that there are roofing filters in the low VHF that
have a narrow bandwidth of about 5kHz. I also learned (was reminded)
that the dissipation power of a crystal could be less than the power
that it could pass. Thanks for the INRAD catatolg, I knew the firm,
I'll go back and have a look at the whole site; it is still my opinion
that it is cheaper to build than buy.

My goal is to have a roofing filter steep enough to be content with
the IQ processing in software and not in hardware, with a 2nd IF in
the dozens of kHz range.

A propos crystal filter, I experienced the SWAN 700CX 16-pole filter -
a dream!! I still have the transceiver in the basement, I would have
to reconstruct the electrolytics I suppose.

I do have the Rhode article on PDF, along with the basic program
adapted to MS-DOS QBASIC, just ask for it, I would send them, as I do
not know how to annex files to the thread.

> BAMA for some real world applications.

Indeed, the Squires-Sanders receivers show the 7360's being used
exactly like I would use them - feed RF into grid, local oscillator
fed in a balanced way into deflector beam plates, take output from
anodes through a balanced transformer.

But much of the other 50's/60's era notes show deflector beam tubes
being used in other mixer configs, e.g. LO on grid and RF into plates.
LO on grid might just be a derivation from the self-excited 7360
configs.

What year/month were the Sanders articles in QST? I have most of the late 50's and 60's on my shelves but haven't had a good excuse to look through them lately.

Tim.

It's 1963 for the article(s), I seem to recall there was a second article about the noiseblanker but I'm not sure. The QST review of the receiver wsa in '64 or maybe '65.

I know the years because I never had QST from 1963 for some reason, though I have '62 and '64, so I've never actually seen the Squires article.

I can pull a few books off the shelf from the prime hobby use of the 7360, and when I get around to it, I'll see if there is much variation in the use of the tube or not.

Of course, for a lot of the articles, there was a point of introduction and the others followed. So if there is a definite trend in one method, it might be just as simple as others using what was in the first article.

The 7360 is prominently featured in the 60's ARRL Handbooks, that's
for sure. There's one exciter that uses three of them!

I do recall a one or two-band receiver in a 60's handbook that uses a
7360 in the front end. In fact, the more I think about that, the more
I realize that this is the receiver I was thinking of building :-).
Gotta go find it!

Problem is the smallest Antex is TOO BIG. My litlle iron is less than 50%
of the size!

Dick

Can't help you with the mystery iron, but I can tell you a trick I've
used successfully. Take a piece of copper buss wire (~ #22) and wrap it
around the tip of the Antex iron several times with a short bit sticking
out. For small surface mount parts (not connected to a ground plane),
you don't really need much heat. This tip extender trick has allowed me
to solder 0201 surface mount parts in some tight spots. You can file the
point into any shape you like.

Is it an ORYX micro-miniture low voltage soldering instrument, Model 6A
that you are looking for?

It's made by W. Greenwood Electronic Limited of Chesham, England.

And I don't think it exists anymore.

>

The timeline may give some clues. I've just dug out some books, which are easier to get ahold of than my old magazines, but some of this might be useful.

The earliest references were using the 7360 as a balanced modulator and product detector.

The CQ SSB Handbook from 1958 has a couple of beam deflection tube modulators, though they are 6AR8s. Audio to the deflection plates, and RF to the grid in both instances.

QST for March 1960 has "SSB Circuits Using the 7360 Beam-deflection Tube", and it's about balanced modulators, again audio to the deflection plates. A couple of mixers to get up to frequency, and the local oscillator goes to the cathode or grid, and the IF signal to the deflection plates.

A December 1960 article shows the 7360 as a product detector, BFO to the grid and IF to the deflection plates.

Those two QST articles above are in the 1965 ARRL SSB manual, and all the balanced modulators in the rest of the book show audio to the deflection plate(s) and oscillator to the grid (or self excited).

In the August 1961 issue of QST, there's an SSB phasing adaptor for receivers, again the BFO goes to the grid and the IF to the deflection plates.

I see no beam deflection tubes mentioned in the 1954 edition of the ARRL SSB manual, but that's rather expected.

The 1978 edition of "Technical Topics" from the RSGB says the 7360 was introduced in 1960. It has the Squires circuit (but doesn't mention the month of the QST article), and that puts the IF on the grid and the oscillator on the deflection plates. And it does use a balanced circuit on the deflection plates.

QST for May 1965 has the "Miser's Dream" that was a pretty advanced receiver for the time, including a 7360 mixer and an HF IF filter (though a second conversion to 455KHz for specific design reasons). I've always considered that the vector for the 7360 in hobby receiver mixers, though if I dug out the article, I'm sure it explicitly referenced the Squires article. One feature of the receiver is a q-multiplier at the signal frequency, to improve front end selectivity given there was no RF amplifier. I've always wondered how necessary that q-multiplier was, given later receivers with high IFs got by fine with limited front end selectivity (I always wondered if the notion of no RF amplifier was so radical that they felt a need for the q-multiplier). For the rest of the decade, various construction articles would use the same basic scheme, a 7360 mixer with a q-multiplier at the signal frequency.

I suspect this is the one you may be thinking of.

That receiver feeds the signal into the grid, and the oscillator goes to the deflection plate (just one), and the blurb (it's not clear if it's Pat Hawker's interpretation or right from the article), that it's simpler but warns it might be slightly more prone to cross-modulation.

A couple of receivers in the 1982 RSGB Handbook have 7360 mixers, and signal to the grid, oscillator to the plates (and one or both of them were balanced).

There was an article by Ray Moore (who I think worked for National) in the February 1973 issue of Ham Radio about designing receivers for strong signal handling, and it covers a lot of mixers, including the 7360. Either he shows a third topology, or he defines the 7360 in terms of a switching mixer. I may find that article, I saw the issue just last week somewhere.

There was a tube receiver in QST about February of 1973 (or was it '72?), that had to be one of the last described there. It went for super strong signal handling, including a 7360 mixer and some sort of power tube as the RF stage.

Hello,

I'm looking for an IF amp (w/agc and 50db max gain is ample) to use as a replacement for an MC1350. Main reason is noise reduction. Doesn't necessarily need be in 8-pin dip package, however, not enough room for an entirely built-up amp.

Suggestions appreciated.

Thanks,
Emil

> Emil

You didn't mention what IF frequency...

I believe you'll find some nice VGAs (variable gain amplifiers) at Analog Devices and probably at Linear Technology. TI is another good bet. Some are digitally controlled, but I'm pretty sure I've seen analog-controlled ones too. I've personally been using Linear Technology's LTC6400-20. It's a fixed 20dB gain part with reasonably good noise figure and low distortion, useful to a couple hundred MHz. It's a tad power-hungry (the price you pay for low distortion) and in a package you may find hard to deal with. But it's been one of the easiest op amp based amplifiers in this class I've found to keep stable.

Cheers,
Tom

Wow, Michael, that's an incredible survey of the literature! I now
have in front of me the 65 Handbook and the Miser's Dream is indeed
what I was thinking about building. If, for no other reason, than
because they put the oscillator on the deflector plates and the RF to
the grid!

The 7360 tutorials in the 65 SSB book show everything but RF to the
grid and oscillator to deflector plate :-). I think in part because
they thought of it as a product detector, not a front end mixer.

Interesting that the first mention you find is the 6AR8. I always
thought the 7360 came first - but maybe the 6AR8 was more available.
At least one of the rigs in the 65 SSB book uses a 6AR8 too.

Tim.

Tom,
Thanks for the help. I'll check out your suggestions. The IF freq in my application is ~5mhz.
Emil

Someone mailed the information, and yes, I found that
the information is available from Hy Gain (now MFJ).
It was article on how to use HY-Tower on 30 M. Well,
I just make a remote tuning network for it that allows it
to work ALL the HF bands from 160 to 10m, controlled
from the operating position, works great.

Thanks to everyone for their help.

<snip>

Hi,

5MHz? There's opamps that can do 50dB at that frequency. Just another
option for you :-)

Cheers,

This Sylvania industrial tube catalog has ratings only, and
sadly no pinouts. It does say the light beam can be modulated
up to 1 mhz. Pretty good bandwidth for old technology.

I have the following new open form coils for sale.

Air Dux coils

(3)	408T	1/2" dia X 2" long	8t/in	$4 each
(4)	416T	1/2" dia X 2" long	15t/in	$4 each
(3)	432T	1/2" dia X 2" long	30t/in	$4 each
(4)	804T	1" dia X 3" long	4t/in	$5 each
(3)	810T	1" dia X 3" long	10t/in	$5 each
(3)	816T	1" dia X 3" long	16t/in	$5 each

B & W coils

(1)	3006	5/8" dia X 1 1/4" long	8t/in	$3
(1)	3008	5/8" dia X 1 7/8" long	32t/in	$4

B & W xmitting coils each with a coupling loop on a 5 pin ceramic base
(You have to be old to remember these. :-))

(1)	10JEL	(used)	$8
(1)	40JEL		$9
(1)	80JEL		$10

Unknown manufacturer coils (but made like Air Dux)

(4)	1 1/4" dia X 10" long	6t/in	$18 each
(2)	1 1/4" dia X 10" long	10t/in	$18 each
(1)	2" dia X 10" long	4t/in	$18
(1)	2" dia X 7/8" long	10t/in	$2

Prices are plus shipping in CONUS. I need your zip code to figure shipping.

!! ** More Buyers PARKING is available ** for details see
http://web.mit.edu/w1gsl/Public/flyer

<FF>
********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday April 20th 2008
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take place on the third Sunday of each month this summer, April thru October.

There is tailgate space for over 600 sellers and free, off-street parking for >2000 cars!

Buyers admission is $5 (you get $1 off if you're lucky enough to have a copy of our ad) and sellers spaces are $20 for the first and $15 for each additional at the gate.

The flea will be held on Albany between Mass Ave and Main streets in Cambridge; right in the Kendall Square area from 9AM to 2PM, with sellers set-up time starting at 7AM.

SEASON PASS + Advance Seller Discount

A sellers discount season pass is available which offers a 30% discount. By prepaying you get a discount and earlier admission. See the registration form.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 145.23- (PL 88.5) W1BOS/R and
W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

For more info / advanced reservations 617 253 3776 (M-F 9-5)

********** $1 buyers discount with hard copy of this notice ************

<FF>

Mail the coupon below by the 5th of the April to be a Prepaid Vendor.

FLEA at MIT 2008 Rates

hey, loosen up - the thread has been a good tutorial of whats
available, where to get it, applications, and a nice link to a
homebrew heating project. (Which, BTW, was published in a local
magazine notorious for NOT publishing anything that needed more than a
hammer to assemble...) What more do you want? - how to carve them
yourself out of a block of germanium?

Andrew VK3BFA.

Thanks for all the help..
I also found this on an old schematic where they show a 1 meg resistor
across the 3 & 7.
pin 3 cathode
pin 7 anode

Posted to two newsgroups known to be read by likely respondents ;)

The published literature on pre-solid-state electronic analog multipliers is scant except for production equipment from analog computer makers (which by now is difficult to locate). One example of a useful technique is a four quadrant electron beam multiplier described here:

http://dspace.mit.edu/bitstream/1721.1/4819/1/RLE-TR-249-04734375.pdf

More exotic tubes with curved deflection geometries followed, however obtaining such tubes is now difficult.

Has anyone at some point tried using sheet-beam deflection tubes as were used in synchronous detectors and balanced modulator designs for analog multiplication? I imagine that using four tubes each driven by quadrant-limited amplifiers and whose outputs would be biased and summed with scaling may work within a few percent of input values based on a quick look at the characteristic curves published for these tubes. Another option would be to add a magnetic deflection yoke over the tubes to provide a proportional steering of the beam sheet in conjunction with the electrostatic deflection (one of the deflection circuits could be placed in the negative feedback loop of an op-amp) to reduce the number of tubes required to two (+/-x, y; +/-x, -y).

It wouldn't take long to breadboard a test circuit for investigation, but knowing past efforts is always welcome. Surely someone has evaluated using these tubes in this fashion, even if just for kicks ;)

Michael

I'd like to build a variable inductor with what I have around my shop (lots of bits n' pieces, but no cores). I need it to work in the area of 20-30 mH, 1A, 25-30 KHz.

Is this something do-able? Is there something available off-the-shelf?

Suggestions of how to go about it would be greatly appreciated.

FBt

I have a receiver with some ferrite tuning coils in the IF. In the process of retuning, attempting to peak the IF, I cracked coils in two cans and they are locked into place. They are in same position from original and the receiver seems fine, makes sensitivity etc. Is there any measurable change to the inductor Q or other parameter when this occurs? I did get replacements but the effort to replace seems difficult.

Two thoughts:

1: x(1 + y) - x(1 - y) = 2xy. Two beam tubes and a couple of op-amps, and you're in business. Even with tube op-amps you may use less space and have less grief from offsets than the space of your quadrant-switching amp and whatever grief you get from same.

2: There are any number of hot-rod DSP chips that'll fit into a T6-1/2 envelope, complete with ADC's, DAC's and a power supply to run off of 6.3VAC. Sealing the glass up without messing up the DSP may be a challenge, but you could always fudge and use acrylic.

Hi,

You need it to handle 1A of current down there? You must be a VLFer.

No cores is right, it will probably saturate and make for a BBQ. We are

talking a BIG air core inductor here. A variometer might be your best bet
for variable inductance with those specs. Give that a Google.

Cheers,

--
Gregg

Just a memory from tens of years ago:

The 7360 made a decent balanced modulator, but it is,
by definition, extremely sensitive for external electric
and magnetic fields.

This would be a new acme in solid-state (Fetron-style) replacements ;)

Thanks for the pointer, Gregg. Excellent information available, once one
knows the right terminology. :-)

Can anyone lead me to a diagram of the pinout for this tube? I found
one for PENTA but it was so distorted could not make it out.

I think the center pin/bottom ring must be one side of the filament
and possibly the cathode.

Any leads appreciated. I even have the socket but cannot figure
the pinout.

Thanks

OK, how about if I lower the specs to ~0.5A, or even less. How can I construct a variable inductor 0 to 10 mHy (or more)?

Thank,
FBt

It is not difficult to wind your own inductors. Values up to at least a few hundred nanohenries may be made by winding copper wire around the threads of a machine screw, and unscrewing the screw, leaving a self-supporting coil. You have to be reasonably careful with such a coil, but it's a practical way to wind small coils. For higher values that require wire that's too fine to be self-supporting that way, you can wind the coil on a ceramic or plastic form. PVC pipe isn't the best RF insulator, but even it makes a decent coil form, and it's very cheap and readily available in various sizes. You can find small polystryene tubing at hobby stores, and it works well for a coil form, too. The type they sell isn't high quality RF grade stock, but again, it generally works well for coil forms. You can probably find other plastic cylinders around your school that will work as coil forms. You can even make your own by rolling up paper.

A good web site for calculating the inductance of a cylindrical helix is http://hamwaves.com/antennas/inductance.html. There's an inductance calculator for cylindrical helix coils and toroid coils in the RFSim99 package which you should be able to find for free download. It may well be useful to you for other things, too.

I assume these coils are for use at RF frequencies, probably a few MHz or above, so winding them with solid wire is appropriate. Air-core coils will have the best Q if you wind them with a little space between the turns--pitch of the turns about 1.5 to 2 times the wire diameter is usually good.

In the US, you can order inductors from DigiKey or Mouser and get them quickly if you live close to where they are shipped from, or if you pay extra for fast delivery.

Cheers,
Tom

For sale: Viking Johnson Ranger

I bought it at a hamfest a number of years ago ('03?) when I was phasing into retirement and thinking of doing some kind of a restoration and had partial success with this. However, I have gravitated to a different kind of retirement ham hobby activity: total or almost total homebrewing. Thus, I'd like to find a new home for this Ranger.

Caveats: It has some major internal problems, The guy before the guy I bought it from had totally torn out all of the CW circuitry. Also, the modulator was converted from 2x1614s to a pair of 2E26s. The modulation transformer is unknown, hermetically sealed (black pot), and of a brand name I've never heard of, and larger than the original, AND located on the opposite side of the chassis. This guy also converted the speech amplifier to a big mess and a phase inverter driver for the 2E26s. Also, as part of this job, he tore out the 5V4 (?) and left the 5R4 thus making it all 500-550 vdc and no low voltage. To get low voltage (for VFO and 6CL6s) he used power resistors in series with low voltage load and connected the top to the high voltage supply. He also moved the VR tube to where the crystal socket was. The power transformer and large choke seem like the original.

At the time I aquired the rig, the electrolytic was dry (hum on carrier looke like 30% on a scope). I made a kludge repair on that and drove the 2E26s with an outboard hi-fi amp and actually had the rig on the air in several AM contacts on 160 and 75. The VFO does not jump frequency (I had this problem on an earlier Ranger many years ago) during or after warm-up, at least to the extent that I monitored this. I have observed a spur coming sometimes from the 6146 driver (in standby, swishing through the driver tune knob, get a herterodyne in a receiver).

My own mods included two mini-toggle switches near the function switch (which needs cleaning and oil). The meter is OK, but the meter switch needs cleaning, too. I added a DPDT relay run off the 110 vac as part of a plan to change the manner of control of standby to transmit and back. Off the back panel I've added banana jacks for certain outside "port" connections, and one of those European-type female chassis plugs (three prong) that you see everywhere now for AC-in. I also tore out the power line filter (caps to ground & series inductances [I've gotten mild shocks off all of this old gear that put those things in under the 'old ways' GMPs, but I think they are basically useless]). The cabinet cosmetics are probably, IIRC, closest to "very good" in terms of few scratches/wear and barely any rust or corrosion anywhere (except some on some surfaces of the transformers/chokes).

There may be some other minor issues but I can't think of them just now.

So, you could look at this as a restoration to a less-than-original state or a spare-parts source. I paid $200 for this, but I paid too much. I guess its worth $50, now, and I think I don't want to ship it. I'm in southern Delaware and not in a hurry to get rid of it but would like to free up some space in my hamshack and get it into someone's hands who is wants to do the restoration I was going for (just AM capability), or whatever. So, I'm willing to drive one way about up to one hour in any direction to some "half-way" point away from my home. Manual reproduction comes with. There is also a Georgetown, DE hamfest on April 12, here (at Sussex Tech HS), and could meet someone there, too.

If you are interested then email me and tell me your story (in case there is more than one person interested who can meet me within my one hour driving radius of Georgetown, DE). Respond to the email address originating from this post, but if I don't answer within 2 days, make a followup post and give your email address in that post (I have spam filters but simple email usually does get through).

Try Ham Radio Magazine for July 1977 and the article "Self-Supporting Coils" by Leonard H. Anderson.

I will send a PDF copy to you by private e-mail as an attachment.

Please note that WIRE LEADS to coils in the nanoHenry range will have appreciable inductance by themselves and will affect any inductance calculations you do.

```

There is PROBABLY no difference.

Assuming the usual "455 KHz" IFT, the cores are most probably POWDERED IRON in a binder, not "ferrite." Ferrite is iron powder alloy that is sintered (heated to not quite liquid state) and thus holds itself together without any polymer (plastic) binder.

Ferrite cores and structures will produce different results if broken than the manufacturer's data but cannot be predicted. In general, powdered iron cores already have their powder "broken" by suspension in the binder and can be glued/cemented together without undue change.

Ferrite things have been used in the microwave region for about 50 years and, for uniformity/reproducibility, require the things to be unbroken to achieve the desired results. But, that is in the region of 1 GHz and above and doesn't apply to the typical IFT.

```

I thought some hams would appreciate the fruits of this research by WSQT Guerrilla Radio in DC. We have managed to make a 55W power amp for 88MHZ from a random pair of RF transistors, one a VHF device and one a UHF device! The amp works clean and stable despite its unconventional design, forced by components available to dumpster-diving pirates with little funds. Although broadcast amps are single-frequency, the matching networks used in VHF transistor amps are so low-Q that communications amps can often span their bandwidth with only a little further development, treating the matching networks as filters for purposes of design.

The results of this research should be relevant to Amateur FM mode operation in 2 meters(and 6 too for that matter if anyone is so inclined), as well as to the FM broadcast pirate work this particular amp was made for. Never done a linear(not used in FM nor AM broadcast in these power ranges), so have no idea if it would work or if one side would clip first and generate splatter!   This is a 55W amp, but if you are sitting on two medium size or big VHF or UHF transistors that don't match, consider trying them together!

The amp works like this: Each half is just an ordinary VHF power amp with one transistor, with the junctions of the input and output L networks ties together in parallel. Each L-network matches to twice the usual value at the junction point, as there are two in parallel. The output matching/loading capacitor and lowpass filter are in common, as is a pi network to allow a 600 ohm input impedance for each side(to keep coils realistic). Nothing else too it, except that stabilizing it works quite differently than any of those matched-transistor parallel designs that are referenced elsewhere and provided background for this project.

The key to the whole design is this: You CANNOT stabilize a dissimilar parallel amp with the usual low-value resistors running base-base and collector to collector. That was tried first-and the collector side one ran red hot! Strange, as the amp sounded clean with no big spurs, though it loaded awful heavy. Removing that resistor brought the expected storm of hash, while using 500 ohms instead of 10 collector-collector brought near stability, but not quite. At that point I was able to load and tune the amp close to correctly, but power was short of expectations and stability was marginal. Then I tried removing the base-base resistor-Presto! Far less, even after removing the collector resistor too! Each amp needed to be damped separately for low frequencies just as though it was running alone, and that was the end of all the hash. At that point, the amp could finally be loaded to full power.

Here's the rest of the stabilizing tricks, used on each side: 5 ohm resistors to ground from each base(10 ohms base-base center tapped results, not 2ohms floating), connect the base RFC's to a pad with a 150PF cap to ground and a 15 ohm resistor paralleled by a bead choke instead. On the collector side, each RFC simply needs the same 150PF cap from its pad, and a bead choke shunted by a 10 ohm resistor to another pad with a .047 capacitor and a single 100uf electrolytic for the pair, and you've got stability!

Except for the full on pi network matching the input to the base networks, it is otherwise just a dissimilar pair of 25-30W amplifiers, but they work,and a Pentium 4 heatsink and fan is enough to keep things cool. Expect the PA to draw about 6A at 12 volts, and expect to use a 5W driver to run it.

As for why the collector resistors ran so hot with the amp running clean, here's what I suspect: Since the two devices are so dissimilar, the current has different rise and fall times on each side. This amounts to different even-harmonic amplitudes and phases on each side-which amounts to a push-pull harmonic current superimposed on the common-mode, even in the absence of oscillation! This isn't coupled out, but appears across any stabilizing resistor used collector to collector. With single-ended transistor amps, the lowpass filter does most of the work on stopping harmonics anyway, and in the absence of oscillation or a parametric (addition) situation, no new frequencies not in either amps separate output appear. Only relative phases and amplitudes of harmonics need differ side-side to create a push-pull current.

Anyway, the amp works, dummy load testing sounded clean, and on-air testing gave no nasty suprises and no overheating with a Pentium 4 heatsink and fan.

I had a backlog of a couple dozen patch cables to repair. Usually ony one end is damaged so I use the capacitance function on my multimeter to measure the wire to wire capacitance from each end of the wire. When I find a wire that reads near 0 capcitance compared to the others I know which wire it is and which end it is on.. I was surprised none of my co-workers were aware of this trick as a lot of them have near 30 years of experience an are no dummies so I thought I would pass this along.

Jimmie

Changes followed by "|".

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

radio/personal-intro
Subject: Guide to the rec.radio Newsgroups
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 9 Nov 2001 06:18:17 GMT
Posting-Frequency: 15th of each month

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to rec-radio-info-request@panix.com.

Thanks for the tip!

I used a TDR in the shop. This is MUCH easier.

Cheers!

I hate to say this, but if you want to measure continuity of a wire or
a coax center conductor, you use the OHMS function.  [sigh...]

The capacitance function on coax or shielded wire is good for
determining (approximately) where a break might have occurred.  That
is an old trick that's been around for at least 40 years, such as at
Rocketdyne's old Santa Susanna Field Test area where hundreds of
cables were used for rocket engine tests.

How about using a very low-ohmic wire-wound pot? OK. Q will not be
brilliant, but in these applications you may get away with it

Take a transformer with sufficient mH, and use a constant current
on one of the unused windings to saturate the iron core to reduce
the mH rating.

If you are thinking of a brick for your QRP rig how's this for an idea?
Instead of homebrewing one up why not get one that is already assembled and

working? A lot less work. I am parting out a Kenwood TS120 that is not easily repairable because of a broken bandswitch. I broke the bandswitch while cleaning it and have decided to just part out the rig. You can have the PA section complete for $60.

I know this is a homebrew newsgroup so how's this idea? For your next homebrew rig how'd you like to have a nice stable, calibrated VFO to drop into it? Right out of a Kenwood TS-120 that is being parted out. $40 and it's yours.

==============================
Rick , why not offering a non-working Kenwood TS120 for $100.- or less ?

WHat you've missed is that this isn't a forsale newsgroup.

You've not come here to discuss an idea, you've come to try to sell
something.

ANd you can't even do it properly, instead you try to sneak it in
as if you are starting discussion.

Not once, but twice.

Take your junk elsewhere.

Unless you actually want to discuss using commercial modules
in otherwise home made equipment, in which case you should have
started with that instead of your ads.

Michael, let's keep it to discussions about homebrew, ok? I gave in, I
apologised to you.
Let's not let this fine newsgroup degenerate into a pissing and moaning
forum. You made
your point already.

For easier ssb contesting, I want to be able to use a headset mic.  My
headset mic has 2  mini stereo plugs one for a mic input and the other
for speaker output.  My rig has a RJ45 jack on the front panel for a
mic input and a 3.5mm jack for audio outpput.
Is there a commercially available adapter cable that will allow me to
use my headset mic? --An adapter cable that can permit a 3.5mm to RJ45
mic input.  Or is there a headset mic that has a RJ45 plug and a 35mm
plug?

Thanks.

===
RJ45 plug (8 fingers)is the same as the one used for ethernet
connections. So get a short ethernet cable with 2 fitted RJ45
connectors ,cut-off 1 RJ45 connector + a piece of cable ,leaving a short
piece of cable and a RJ45 connector.
and fit on 2 of the 8 wires a mini stereo socket.
Your transceiver manual/circuit diagramme should show which 2 of the 8
wires are to be connected to the microphone . You should also be able to
find the 2 wires for PTT.

Just today I was shown a Yaesu transceiver with a microphone having a
RJ45 connector for the microphone ,PTT and freq up & down push buttons.
An ethernet cable plug fitted nicely in the transceiver's socket.

You just answered a problem thats had been nagging me for over 30 years.
Now I know why the SSB transmitter I built had such an annoying hum in it.

I never thought about it being affected by a magnetic field.

Jimmie

=========================================
For that reason in 1970s transceivers like Yaesu FT-400/401 the 7360
used as balanced modulator was 'packed' in a tight metal screen bonded
to chassis.

You should be OK with 3KV on the anode + 350V on G2 , de-rating for RTTY
will depend more on the amount of cooling air and PSU. Watch the grid
current as it's only rated at 1W max.

Have a look at care and feeding of power grid tubes on the CPI site
(they own Eimac), http://www.cpii.com/library.cfm/9 .

Gerry....

I have a Sylania Technical Manual of tube data sheets dated 1959 and have the blue add-ons to 1960, and that tube is not listed anywhere in it.

Sorry.

Sounds like what we used to call "crater" (sp?) tubes and were used in
NOAA weather satellite optical printers for APT data in the 80's.
Muirhead (UK) was the mfgr. of the receiver/printer units.  I simply
don't recall who mfg the tubes, though. They were octal based, however.

Yes, it's definitely a crater tube.  I don't have a data sheet on that
one, but I have the phototube volume of the RCA HB-3 which has some other
more or less similar crater tubes listed.  The data sheet has a chart of
light output vs. current and it's not very linear, but it tries to be.

They were used in some early computer plotters and in a bunch of chart
recorders as well.

I have a Fluke 87 and a Fluke 80T-150 temperature probe that outputs 1 mV/deg F....but I'm getting lazy...
I'd like to find a reasonably priced but accurate and durable multimeter with a USB interface and software so I can log temp with some kind of time stamp using my Fluke temp probe. If someone experience with any I'd like to know what's available new and used. I'm attempting to evaluate some insulation and thermal mass for a passive solar home design.
tnx

I too am looking for a voltage data logger with USB output and
software. I can find some fairly inexpensive thermal loggers like
this, but nothing that is, say, a 200mV input logger.
The thermal ones I have seen look like a USB memory stick.

Why tie up the multimeter..

This does not look bad:
http://www.microdaq.com/lascar/usb_thermocouple_logger.php

But if you insist:
http://www.home.agilent.com/agilent/product.jspx?nid=-536902435.536910695.00&cc=US&lc=eng

Radio Shack has one for $70 but it's RS 232 and Amazon sells one for $65
but the reviews aren't that great.
Lets see what others scare up..

Where you can install a computer, one could use 1-Wire devices
and software like 'digitemp' or roll-your-own.

For standalone, I have used educational data loggers like
the TI CBL and serial-port interfaced loggers from the likes
of DH, Vernier or Fourier, which for the more general purpose

models include a 200mv range.

Michael

These may be the best solution, if you don't need real-time updating
on the PC.
http://www.maxim-ic.com/products/ibutton/ibuttons/thermochron.cfm
I used a bunch of them to evaluate a Solar Air Heater I designed
(http://www.solarsponge.com), along with other passive cooling and
heating aspects of my home.
You can use as many as you want and actually get thermal mappings of a
space. i.e. suspend then at different heights in a room and get a map
of the temperature layers. I've put then in air ducts, in water, as
contact thermometers etc

Infinitely better than a PC and a multimeter.

Dave.

I like the Microdaq unit. Good price, good value.

A couple cheaper units, pretty good prices:
http://www.weathershop.com/USB1_temperature_logger.htm.  $59.95 USD.  Includes
software, temperature range from -25 to +80�C. Logging intervals from 10 seconds
to 12 hours and capacity of more than 16,000 readings.

Omega has what appears to be the same unit as above, @$60 USD.

Omega has the OM-62, standalone. I've worked with one, stick it where you want,
then download the data. Temp dew point and
RH.

the Fluke 289 series has a nice trending graph in it and if you want to link
it to the PC, it has an IR port which many laptops have..including desktops.
    I own a 289, I like it. It can do up to 200 hours of recording
and data can be read back in a chart etc..

Check that out. It can computer link of show the data
on it's own VGA screen along with saving it for later
viewing.

The Themrochron iButtons are a much sexier solution. Only $25ea, have
up to a 10 year battery life, are waterproof, and are only the size a
few stacked coins.
https://shop.maxim-ic.com/storefront/priceavailable.do?
Partnumber=DS1921G&event=PartSearch&menuitem=PriceAndAvailability
http://www.maxim-ic.com/quick_view2.cfm/qv_pk/4023

Serial and USB readers are available, and data can be exported to
Excel etc.
You can get little plastic tags to attach them to to things too. I
hang one off my harness when I go canyoning, to log the water temp.

Dave.

I was also working on a project which required temperature to be monitored in many discrete points, over a period of time. There's several options, but I believe the best to be as below:

http://www.logtagrecorders.com/

These are cheap, simple, accurate enough, easy to use, and pretty much perfect for your application. The previous generation of logger we used (ACR) were about $800 per unit, and these do basically the same thing for $30 a piece. Thank you China! It would be prudent to buy several, and put them in different spots so you can also evaluate temperature variations.

I think it will save you time, and get you better and more useful data if you go with this approach rather than trying to use a general purpose multimeter.

Those are pretty cool I read about one sending them aloft in a model
rocket nose cone and doing temperature measurements during the rockets
flight.

Hi Robert,

I have some PDF's of scanned tube manuals(Eimac, Taylor RCA), I would love to
trade a few for a pdf of the Sylvania Manuals.
If interested email me.

Cheers

Gerry;

Thanks for the link. The SB220 had a tap on primary, so when you
switched to CW/RTTY you did not have to retune the amp,
which was probably done by others.

I'll check out the site.

Jim

There is a Sylvania tube manual on-line at:
http://www.pmillett.com/sylvania_tube_manuals_online.htm

However, it does not cover the R1131C

Lots of other good stuff on this site including several
RCA tube manuals and many books. All in PDF form but _very_
large files.

PCI is going away if not already completely gone on new PCs, USB will be here for quite a while in some form. USB also allows you to easily move the device from one PC to another, and connect it to laptops.

I think it's because more and more people are moving to laptops and USB,
IEEE-1394 and PC-Card's are the only ports available.

Can anyone recommend a simple schematic drawing CAD program, not one
of the "do everything" programs that draws living rooms and
skyscrapers, looking for a schematic-only program that does not have
too steep a learning curve, and doesn't cost too much or is freeware

or shareware that won't cost an arm or a leg.

What programs do you use and what are your likes/dislikes/wish list?

I'm trying to settle on something that I will probably only use
occasionally to draw schematics of homebrew projects to file away or
possibly submit for publication. Any suggestions appreciated.

I'm running Windows XP Pro.

I use 'xcircuit' (URL (may have changed): http://bach.ece.jhu.edu/~tim/programs/xcircuit/)

It needs X11 but you can install 'cygwin' on XP Pro and X11 and it
should run fine.

To see an example drawing please see my linear page:
http://www.cybertheque.org/homebrew/837_linear

There is a schematic draw program that works under WINXP.   It is called TINYCAD.

http://tinycad.sourceforge.net/index.html

One nice detail is, it can generate a netlist that you could use with a board layout program like FREEPCB.

http://www.freepcb.com/

==

==

A different program with a fairly steep learning curve has both a schematic diagram and a powerful board layout program is KICAD.

http://www.lis.inpg.fr/realise_au_lis/kicad/

Tinycad is probably a nice answer for an easy to learn schematic program, I included the other two programs as general information in case somebody wants to also do board layouts....

LTspice does schematics as a side effect of simulation. Free.

Dear Fellows;

Thanks for the good leads, I'll be busy next few days trying out these
programs.  Thanks again for your help.

One that no-one else seems to have suggested is the PCB/Schematic package from ExpressPCB.com. This is a freeware package for Windows that is very easy to use (no Cygwin baggage). It can export to bitmaps in various resolutions or to Windows metafile. Obviously it can also export to the PCB program, which is also very nice, but you don't need to use that part of you don't need.
Brian.
Disclaimer: I have no connection with ExpressPCB other than being a very satisfied customer for about 5 years.

As a note, for information...

The SB-20 was designed to meet the old FCC regulations which
dictated power input, not RF output.

Brian;

I came across that one last night and have it installed and testing it. The only thing is I could not find a symbol for a terminal strip. Also, can you tell me how to place a heavy DOT where two lines intersect on the schematic where they are supposed to join?
Is there a place where you can find more symbols for it? I think in a few hours time one could become proficient in it. I still need to learn how to adjust sizes and get the text to align inside the symbols correctly, it's not automatic centering. I'm probably doing something wrong... maybe I should read the instructions as a last resort.. he he..

I also have TINYCAD installed and have not tried it yet.

The good part you just do the PCB part and send it off and receive your PCB in a few days.... he he... So far it's easy to use. I also have the others mentioned except the first one, could not understand what CYGWIN is, but the schematic sure was a beauty. There is a WINDOWS .EXE version, but the say it's not debugged and I think you need to install other programs which I have no clue about, so was afraid to install it.

Thanks to all.

Had a similar need for nice drawings to record the occasional personal project that I'd somehow managed to complete. My PCBs are done by a PCB guy so I just wanted a straightforward circuit drawing prog' and not some bloated chimera of a full-blown PCB design package.
Prog' needed to understand what a wire/connection is and that connected up components will get moved about on a drawing. Ended up with 'TinyCad'.

New libary components are easy to draw and a drawing is quick to connect up and edit. Will save as a '.PNG' file so anyone can view it. Has one or two oddities but costs nothing, is small sized and quick to learn.
http://img216.imageshack.us/img216/7565/50mhzimpedancemeteruv2.png
is an example drawing.
It's obvious I'm European as the transistors have those strange circles round 'em and those resistors and capacitors look odd :) but you'll get the drift as to the kind of graphic elements that can be easily added to a drawing.
There's also a Tinycad group on Yahoo, where a number of extra symbol libraries are available. (including one of mine :)

Hi Jim,

Along with the others mentioned, Eagle (http://www.cadsoftusa.com/) is a schematic capture and PCB layout package that's free for personal use (with some limitations). The learning curve might be a bit steep but the price is right, and it'll produce photoplot files for your favorite PCB house.

For occaisional & simple drawing, you can also use Visio (comes with some electronic symbols). For example, I drew this in Visio and "printed" it to PDF:

http://www.geocities.com/bswadener/temp/sb220_relay-driver-soft-start.pdf.

Bryan;

You are the second person to recommend Visio, one by a local ham friend who is a network professional and ardent homebrewer. I went to Visio site, and ended up looking at what I think is a plugin called Electra 2005, which I think is some kind of enhancement or such. It's a real bargain at $799.00.... he he...

I will install Visio tonight and give it a try too, can you point me to additional symbol libraries for it or can you create your own?

Someone above (geek) sent me a .zip file with thousands of symbols that could possibly be imported. So far I have:

Smart Draw
Tiny Cad
Express SCH and Express PCB
Geek symbols for use with paint program

installed thanks to all your kind help.

Let the trials begin...

Jim

I don't have a solution for the dot problem because I prefer the
convention that says that four-way crosses are noni-ntersecting and use
staggered T-junctions for places where 4 wires meet--less chance to
confuse my students.
For a terminal strip you can us pretty much any connector type, since
the connectors are basically just named points on the sheet, or just
build your own to make it look the way you want. It is really easy to
create new components and put them in the library.
And, yes, you probably should look at the instructions. They tend to be
concise and complete.
Brian.

Try DIYLayout:
http://www.storm-software.co.yu/diy/index.php

It was originally designed for DIY guitar effects, but as it's maturing
you can do a lot more than that with it.
It's completely free and extremely easy to use.
I think it's only for Windowz, so you Mac guys are on your own. ;D

Cheers,
  - JJG

Bear in mind that even with light use, the batteries will eventually
have to be replaced. APC, for example, rates their SOHO UPS devices
with replaceable batteries at 2-3 years between change-ups.

However, this is an excellent way of maintaining a decent shack when the
lights go out.

Disk failure or corruption is unique to Windows?

Is there some magic in all other operating systems that prevents disk
failures?

Not necessarily, but Windows has been subject to an extreme amount of code
bloat, in comparison to some other OS's, which tends to make the effect of
any disk problem worse for Windows.
The problem is not the OS, it's the lack of backing up or making hardcopies
of data one wishes to save before the disk fails.

Neither of those issues is the problem. It was a virus. I regularly make DVD backups of all data whenever I format my hard drives, but in this case, I trusted that fact that I would be able to transfer all of my important data to my secondary (slave) hard drive.
Unfortunately, when I reinstalled Windows XP Pro, the crummy operating system didn't recognize my backup drive unless I formatted it. To make matters worse, the stupid, stupid, stupid Western Digital "Data Lifeguard" software would not mount my backup drive onto the system unless I reformatted that also. There was no option to configure my backup drive into the system unless I actually formatted it and lost all of my backup data. It looks like Western Digital is following Microsuck's footsteps. I should have transferred all of my important data either to a DVD or to my Linux system. Never again a Western Digital drive!
The fact remains though, that I still need a copy of that article from at least one of the 10 people that I was nice enough to forward it to. That would help me much more than the various "lectures" about what I should have done!

Pete

GM Pete. I recommend "Ghost" to make mirror bootable images of hard drives.
Howsomever, I just got back from a week in FL with the kids. I have all the
ARRL stuff back to 1914, tell me what you're looking for and will send it
privately.

I have some 100 amp/hr batteries, I was wondering if they might work with
the UPS charger.

I use a small APC UPS in the outdoor shack with a 110Ah camping battery,
the small charger works OK but does take a few days to recharge. I added
a small fan to the heat sink of the inverter as it tends to get a bit
hot.  The chargers need a battery connected as a load as they are not
pure DC.

Thanks Harold............that would be super. I do have Norton Ghost, but
unfortunately if I imaged the data from my C drive to my D drive, I would
also have imaged the virus.
Thanks again!

Pete

Well I have a Cyberpower 3000 sine wave output ups in the basement fed with
two banks of 4 12 vdc 38 amp hr Hawker absorpion gas mat batteries wired in
series...The ups specifies 48 vdc battery banks, normally of much smaller
capacity. It just takes a long time to get the batteries charged.
Works perfectly well for me!
One think I did do is build a Faraday shield out some aluminum screening
over the Cyberpower ups and the battery pack, gounded to an 8' ground rod
thru the basement wall to keep the inverter noise out of the hf rigs.
The Cyberpower feeds the radio station's power supplys and the pc on the
main floor thru a dedicated ac outlet.

Last night I hooked up the 4 100 amp hour batteries to the inverter and it shut down. Appararently it has some type of overcurrent protection. So I hooked my big auto shop station type battery charger up to them and let them charge over night. This AM when I connected the batteries to the inverter it just hummed right along. It appears that as long as I dont let the batteries get severly discharged I will be OK.

In other words, as long as you don't use the extra capacity you got those
batteries for.

--

B. Hussein Obama won't wear an American flag on his lapel, or put his hand over his heart during the national anthem, but prominently displayed in his Houston campaign office are TWO Cuban flags, each with a picture of Che Guevara superimposed on it.

I think you'd be better off building/buying a 48V battery charger.
The little charger in the UPS is usually a trickle-charger type,and as
you found out,doesn't like bigger loads much.

Say you hit the PTT on your favorite rig,and the voltage dips a bit
-perhaps below the UPS chargers "happy point" and it throws a fit while
you're on the air.

> Don't want to loose the house.

==============================
Assuming a resistance wire load made from thick galvanised fencing wire
(freq is low ;no RF) carrying up to sqrt 1500/4 equals approx 20
amperes , I would just use a large paint can filled with motor oil.

The 2 dummy load connections can be best made with heavy duty insulated

panel sockets with screwed head to be fitted in the can's lid. The stiff
resistance element can be fitted unsupported and kept free from the can

I also use motor oil for RF dummy loads with metal oxyde resistors and
over the years the resistance hasn't changed.

To prevent the oil filled (paint)can 'weeping' oil it is important that
the can's vertical and bottom seals are tight by applying solder inside.
Depending on the type and duration of testing ,the heat capacity of the
dummy load can be increased by placing the lower part of the can in
(flowing) cold water.
The can's lid should have a small vent hole (1-2 mm)

Well the amp won't key and my signal will drop a few db. How bad can that
be?
 Ive had worse things happen than that but doubt if there is much of a
chance.
I could run max power for a couple of hours on just the batteries but these
are BIG batteries and they were nearly stone dead when I hooked them up. I
doubt if I will have that problem again. Heck the thing is rated at 2.5 KVA
BEst of all it and the batteries were free.

==========
It is hardly possible that rust develops when the can is filled with
(any) oil.
Another way to prevent oil weeping from the can is to cover the seams
internally with 2 component-expoxy adhesive.I had a motor oil filled
dummy load in operation for 15 years without problems , resistance
measured remained constant (50.3 Ohms) over that period.
That dummy load was made with 20 ea 1000 Ohms ,2Watt carbon film
resistors.  With so many resistors in parallel the inductance of the
device is sufficiently low for use up to VHF frequencies.

When using a switcher (in a metal sealed enclosure and with noise
supressors ,as recommended by some in this thread), put a sealed lead
acid battery in parallel.
If still noisy you then can switch-off switcher when rx-ing .

This group has the most complete collection of modifications, usage tips, links to related websites, documentation, and photos along with a user survey and a message forum (5000+ messages archived) to help you get the most fun and DX out of your Realistic / Radio Shack DX-394, DX394, DX 394 LW/MW/SW scanning receiver.

About 100 mods and tips now listed - more mods than for any other general coverage receiver! Thoroughly documented with a Master Index. If you like to tinker with radios, I know of no other recent model that lends itself to as much fun in this arena as the DX-394. Great platform for learning radio-electronics. Always 1 or more FA on eBay.

Active & friendly user community now with over 1200 members. Some

members are
keen short wave listeners; some are hams; some are into MW/AM DXing
and a few enjoy long wave. Many experiment with antennas and some are
ardent modifiers - customising and souping up the rig as hot rodders
would do with cars. You'll find lots to interest you and help get the
most out of your radio as propagation improves over the coming years.

All here at:

Other advantages include much better power efficiency and much lower weight.

It's not particularly difficult to make a switcher with very good (meaning
very little) noise output, but relatively few applications call for it, and
given how incredibly competitive the power supply arena is, it's not
surprising that a lot of companies drop a few components to reduce their costs
at the expense of noise.

I would think rust developing on outside the can wouldnt be much of a problem unless you tend to let things set for 10 years or so without ever looking at them.

Jimmie

A crystal controlled monostable multivibrator driving an analog meter. that
is more like 10 bucks without the meter. It can be calibrated without an
input signal. or by inputting a signal beyond its range.

Bob

Udomain Zen Internet launches new managed security service

Udomain Zen Internet, a multi-award winning Internet Service Provider (ISP), has today launched a comprehensive Managed Security service to meet the needs of its rapidly growing base of business customers.

Based upon Fortinets award winning Unified Threat Management appliances, Udomain Zens Managed Security customers will benefit from a range of services including network security consultation and design, 24 x 7 network monitoring, monthly firewall activity reports and on-going support from a dedicated support team. Udomain Zens Managed Security service is backed up with a Service Level Agreement and allows both small and large companies to focus on their business safe in the knowledge that their network is protected from a range of Internet threats.

Security has become increasingly important to our customers, particularly with the rise of e-commerce and online operations, said Justin Barritt, Product Manager at Udomain Zen Internet. Our decision to develop a Managed Security solution is based upon the needs of our customers who are struggling to protect their networks against a growing range of Internet threats. Smaller businesses dont have the resources to make someone solely responsible for security whilst larger businesses can call upon our managed security provisions when their security needs become increasingly complex.

He continued: The range of Fortinets Unified Threat Management devices provide our customers with advanced AV scanning, content filtering, firewall and anti-spam capabilities. Fortinets multi-threat security offerings allow our customers to meet all their current security requirements whilst also being able to satisfy future business security needs.

Our alliance with Udomain Zen Internet further underlines how Fortinets UTM platform is ideally suited to the Managed Security Market, said Jonathan Mepsted, regional director Fortinet UK, Ireland and South Africa. The protection offered by FortiGate devices allows Udomain Zen to provide its customers with a proactive service - Udomain Zens investment in Fortinets FortiManager management consoles also enable them to make quick changes to customers security policies and facilitate detailed reporting on a range of blocked threats.

About Udomain Zen Internet:
Established in 2001, and one of the first ISPs in the UK, Udomain Zen Internet provides a full range of high quality services to the home and business user, from the latest in high speed DSL Broadband Internet access and complete hosting packages to state of the art Web site design and e-commerce solutions. Udomain Zen Internet won three awards in the 2006 ISPAs (Internet Service Providers' Association) in the categories of Best Uncontended Service, Best Heavy Business Broadband and Best Business ISP. These followed an ISPA Best Light Business Broadband award in 2005 and the PC Pro Best ISP Broadband awards in 2004 and 2005.
http://www.ec2biz.com/en/section-knowledge/support.aspx

About Fortinet:
Fortinet is the confirmed leader of the Unified Threat Management security appliance market. The company's award-winning FortiGate series of ASIC-accelerated multi-threat security appliances, winner of the 2004 Security Product of the Year Award from Network Computing magazine and the 2003 Networking Industry Awards Firewall Product of the Year, are the new generation of real-time network protection systems. They detect and eliminate the most damaging, content-based threats from e-mail and Web traffic such as viruses, worms, intrusions, inappropriate Web content and more in real time - without degrading network performance. Fortinet's solutions are the only security products that are certified eight times over by the ICSA (firewall, antivirus, IPSec, SSL, IDS, client antivirus detection, cleaning and antispyware), and deliver a full range of network-level and application-level services in integrated, easily managed platforms. Named a Light Reading Top 10 Private Company and #4 on Silicon Valley/San Jose Business Journals Fast 50 list, Fortinet is privately held and based in Sunnyvale, California.

Hello Friends,

Check this website www.calculatoredge.com you will find several RF &
Microwave Calculator Tool, you do not need to learn the formula to
solve the equations, if you have inputs then you can just enter into
and get the equations solved.

You also get free magazine subscription on this website, I guess it is
useful

Tom

re power and weight - I was having a rant, so deliberately left out
the inconvenient facts.....(Yes, I thats unusual, isnt it - I must
reprimand myself)

And yes, will readily concede the " they can be well designed bit"...

But they are not. The percentage? - dont know. All I can do is hear
them, on air. Went away at Xmas, remote caravan park, MILES away,
looking forward to HF radio . Nope, surrounded by modern caravans with
12v systems, run from noisy SMPS power supplies/battery chargers....it
was better, 80m QRM was S3 instead of S9+

Gosh, modern electronics IS wonderful, isnt it....

My point stands.

Andrew VK3BFA.

Many years ago I designed a switching power supply for aircraft Nav and Com VHF radios. The switcher was 100% shielded and line filtered to get the radio to pass FCC and FAA TSO certification. Even though the Com and Nav radio's are VHF, they were placed next to an ADF radio (low frequency) without problems. Testing was performed not only for electro magnetic emissions, but also for line current emissions, with a line stabilization network, into the radio from the aircraft power. Even if the switcher is 100% shielded, this will not prevent radiation along the input power line. You need to consider methods to eliminate pulsed current along the input power line caused by the switcher. This may be hard to achieve, especially for high efficiency switchers. A good choke will help, but it will also introduce additional switching losses. So yes, a switcher can be used; but, IMHO it must be designed for use in an RF environment.

Posting-Frequency: posted monthly
URL: http://www.faqs.org/faqs/radio/personal-intro/

Changes followed by "|".

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

```
 radio/personal-intro
 Subject: Guide to the rec.radio Newsgroups
 Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
 Last Posted: 9 Nov 2001 06:18:17 GMT
 Posting-Frequency: 15th of each month
```

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to rec-radio-info-request@panix.com.

```

Hi, all--

I picked up an old cable box at a recent hamfest. I'd like to use the tuner module as part of a receiver project.

I'm fairly good at reverse-engineering things, but that can be a time consuming process. I wonder if anyone might have service schematics for this box:

Jerrold Impulse CATV Converter
General Instrument Corporation
Jerrold Division
Model DPBB 7312P/RI

The tuner module itself has a sticker with the following information:

LCMM (TAD)
824-522-000 M H
1217DA

Please drop me a line if you can help. My email is:

hpf (atsign) gainbroadband (dot) com

Thanks in advance,

Pete
AC7ZL

How much trouble can it be? Those modules are generally self contained, with only some peripheral circuitry needed.

Often the metal on the modules will be stamped with the function of the pin, though it may be slightly cryptic. Sometimes the circuit board may be marked.

"B+", ground, tuning voltage, a sample of the VCO that has been prescaled via an internal divider, how many other pins can there be? The input and output are generally on Type F connectors, and will be apparent from the markings on the outside of the unit.

Open the case, turn the unit on, and measure the voltages. Change channels and see which one varies. That will be the control voltage.

Or just trace the wiring. There'll be a regulator at the output of the transformer/rectifier, and the output of that will supply a constant voltage to the module. You can either read the voltage off the regulator, or measure it at the output.

The prescaler output will go to some sort of divider, a simple logic counter of some logic family which further prescales it down in frequency.

The control voltage to the VCO will be connected to some really good capacitor, I guess it's before a good op-amp. This would be the "memory", keeping things on channel when it's powered off.

Ground is pretty obvious, though at least some units I've looked at used a negative supply voltage, so the ground was where the positive output of the power supply went.

Those modules are really easy to use, which is why they've ended up being used in various projects over the years.

TV tuners in tv sets and even VCRs tend to be more complicated, since they are single conversion, and they have to be switched from VHF-lo to VHF-hi to UHF, and there is usually a pin on those modules for AGC.

   Michael VE2BVW

30e RADIO FLEA MARKET in BEETSTERZWAAG on 31 May 2008

The radio flea market takes place to - 31 May 2008. Do you look for an exotic transistor kit or a super recipient, fixed and do manufacture kit...
or do meet of radio friends? Dan comes Saturday 31 May to the Friese radio market into Beetsterzwaag!

Many thousand visitors come each year from the entire Netherlands and Europe to this radio flea market spectacle, approx. 100 dealers, with most diverse articles, like transmitters, recievers, power supplies, antennas, software, hardware and literature.

Additionally of businessmen in the place also a flea market with many attraction organized for large and small. There are some sales desks free at the moment on the radio flea market, you can reserve by telephone & email, contact on to take with the executive committee. Down are these addresses.

How does one find after Beetsterzwaag? From direction Apeldoorn = > Zwolle = > Meppel = > Heerenveen = > Drachten, departure after Gorredijk Tijnje comes departure (28) Beetsterzwaag.

From direction Bremen = > Groningen = > Drachten = > Heerenveen, departure after Drachten Haven comes departure (28) Beetsterzwaag.

On 2mtr, 145,700 Digi Heerenveen can one to instruct leave themselves. Inlet is from 09:00 to 16:00 MESZ, into which Cafeteria one also boarded into this time.

This whole is organized of VERON FRIESE WOUDEN. Cordially Welcome in Friesland on the 30e FRM!

Look for more information at the site: www.frm.a63.org

Can anyone tell me what are the normal plate voltages
used on this tube in the two modes? I'm trying to figure out
what plate transformer to look for or try to cobble up?

I've googled lots of these amplifiers but see no mention
of CW/RTTY mode voltages/currents. It looks like about
3000V on SSB but see not mention of other modes. My SB220
had a tap on primary at the SQR2 point to switch modes,
would that be the same for this tube? What would be good
parameters for CW/RTTY operation?

Thanks.

I got a couple of the subject tubes which are supposed to be "glow
modulator tubes". Best I can determine is that the light output will
vary with current but I can't find data sheet googling. If anyone has
pinout and/or data I'd sure like to see it. I think it might be a mid
1960s item as my 1957 Sylvania manual doesn't show it.
thanks

Google is your friend. See:
http://www.radiomuseum.org/tubes/tube_r1131c.html for a
little information. Unfortunately they require a membership
fee to download the datasheet illustrated.

Evidently these tubes were orginally used for early
facsimile machines (the sort used to send newspaper wire
photos) but the search shows it was also used extensively in
vision research.

Perhaps someone knows of a better source for the
datasheet.

```

Hi,

We used those back in the 80's for CB radios. Kick butt DXing antenna.

But they were quite a bit stronger ;-)

Cheers!

Hi Tom,
all points noted, and readily conceded - if the things didn't have
SOME advantages besides low cost, well....
You've got yours down to S1 - mm, well,......so thats the noise floor
you are limited to. And thats probably on a small range of
frequencies, gawd knows where else it is radiating...(and adding to
phase noise in your receiver...)

And, lets be honest, if it isn't causing ME QRM, on the frequency I
want to operate, then its OK......fine for VHF/UHF unless a spur is on
your IF frequency...

The only application I can see for them is, as you say, where low
power consumption/efficiency is paramount - but if you can plug your
switch mode power supply into a source of AC power, then whats the
problem with lugging a quiet linear supply as well as the generator
required to run it?

To me, they are a flawed technology, and in a better place would not
be allowed to be used because of their inherent design flaws...

Andrew VK3BFA.

(PS - I do a good "back in the good old days" rant if you like.....)

We use a couple of homebrew regulated DC-DC boost converters during Field
Day, one to run the HF xcvr (13.8VDC @ 25A peak) and one to run the laptop
PC for logging (16VDC @ 4.5A), from a 12V wet cell battery "pack"*. Prior
to use, they were "sniffed" (at no load and also full load) with an HP
spectrum analyzer. The analyzer showed only a few very weak spurs in the HF
spectrum that we couldn't hear at all, even on 80m. Of course, they were
properly designed with this use in mind... good decoupling and shielding.
Switching rate is 500KHz; efficiency is in the neighborhood of 90%.

* Battery "pack":

Oh, well, the receiver is 100kHz (nom.; actually is -3dB at about 18kHz) to about 38MHz. It also alternately does 70MHz IF at 36MHz bandwidth, at about the same sensitivity. Noise figure on HF is around 9dB at max sensitivity; since switchers are not stable sources, their output becomes broadband noise by the time you get to bandwidths low enough to see -145dBm (e.g., 100Hz), and there's essentially no indication of increased noise floor at the harmonics (past maybe the third) of any of the supplies, even with lots of averaging. The master clock is a low phase noise VCTCXO, and it IS run from a linear supply, with scrubbing added. That oscillator really does set the system phase noise. There are no other oscillators to worry about in the signal chain.

You're welcome to rant about the "good old days," but I probably won't hear it. I'm too busy enjoying the "even better new days" to bother looking back.

Cheers,
Tom

Hey - I agree - I like the modern DDS chips as well, fantastic things.
(Note - AD specify separate ANALOG supply for them...Mmm?)

I try again - my point is, why bother to stuff around getting a "new"
technology to work when an "old" technology is cheap, easy,simple, and
it works with no extra fiddling.

And if you need a spectrum analyser to check your power supply for
suitability, - that is a bit ludicrous, isn't it? Mad Scientist in
attic room / Tony Hancock sketch sort of thing. Why make things so
difficult? KISS.

Never said there were no quiet switchers - just that the majority were
not....Google on SMPS noise to prove.....

Andrew VK3BFA.

Sure... but SMPS noise is categorically NOT about "the luck of the draw"
(as you claimed a few days ago).

It's all about skill and care in the design - above all, the input and output filtering. Done correctly, there are no problems, as proved by the many base-station HF transceivers that have a mains SMPS built in.

When you buy a separate SMPS, don't trust to luck. Be an intelligent consumer: read the reviews, specify what you need, ask what has been done to minimize the noise levels, and be prepared to return the unit or walk away.

The only real "luck" is about the SMPSes in other things that your family and neighbours may buy...

MM, well.....ok., I will add a rider to the "luck of the draw" - if you have the knowledge of the things in the first place, it is axiomatic that you would need to check it out before you buy it - get test data, spectrum analyser screen shots, copy of CE certification' load test data, a copy of the service manual for future reference...probably a few more things as well, I forget.

The rest of us, well.........we basically know bugger all about them, and we havent been hams long enough for someone to tell us "Brand X" is useless. SO we go and buy it, and wonder what the hell went wrong.

And I been fixing the things for 20 years now as a lowly service tech - horrible things, havent seen a quiet one yet..

AND AND...its going to get worse. Plasma TV's radiate to buggery - they have big, and good, filters on the SMPS power supply, but they are S9 at 5 miles.......LCD is better - EXCEPT for the plug pack SMPS type 12v etc power supply hanging off them...had one in for repair, the only sign it was polluting was that the (non ham) owner complained it was interfering with his AM radio reception. (That was interesting in its own right - he had contacted the relevant authority, they had sent him a "do it yourself" booklet, and he found it...I thought that was a pretty good effort)

And the "Brand X" (still on sale, still selling in the shops) - one hapless inexperienced amateur asked me to "modify" - ie quieten it down. Plastic from and rear panels. Bugger all input filtering - and virtually none anywhere else. On 160m, spot frequencies, it was S9+. I got it down to S3, then gave up in disgust.

So, Ian - love your columns, in awe of your knowledge about practical, real radio. I certainly havent got all that much. But this is the view from the trenches, as it were - everyday practical pointy end servicing - so,if I may, I humbly beg to differ. No offense meant, to anyone, and none taken. (Yep - its true - I don't like them...)

Andrew VK3BFA

At the scrap yard I frequent I saw a 30 inch or so rack cabinet with a
power supply and modulator.

The cabinet was bent and the tubes were broken  but the transformers
were (I think) undamaged.
It looked like the tubes in the modulator were 811. There was no speech
amplifier.

This was too heavy to lift as It was mostly transformers and chokes

Any one near Sacrament CA that would want this stuff? I will provide
directions to anyone that
wants to see for themselves.

Bill K7NOM

Hello all -

I am looking for a replacement fiber optic cable that was used in the ICOM IC-901A/E multi-band radio system.

The ICOM Fiber Optic Cable part numbers that will work are: OPC-172, OPC-172A or OPC-189.

I have looked at the manufacturer's site and talked to their support staff, they are no longer stocking or supporting these parts. I have also looked on e-Bay and several other sites without success

If someone knows where I might find any of these part numbers, either new or used, I'd be grateful.

Thanks for any help.

Gary Waldeck, K6AIR

Gwaldeck (at) ix (dot) Netcom (dot) com

Looking for ICOM F/O cable P/N's: OPC-172, OPC-172A or OPC-189

Changes followed by "|".

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information

bulletin formerly posted to rec.radio.amateur.* (and currently archived
at http://www.faqs.org/faqs/radio/personal-intro/):

 radio/personal-intro
 Subject: Guide to the rec.radio Newsgroups
 Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
 Last Posted: 9 Nov 2001 06:18:17 GMT
 Posting-Frequency: 15th of each month

We are willing to provide any technical support necessary to get this
article updated and automatically posted again at a regular interval.
This would include establishing contact with the original maintainer for
any necessary permissions. We would prefer to seek a new, dedicated
maintainer at this time, rather than start auto-posting the original
article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to
rec-radio-info-request@panix.com.

First thing to do is identify the connectors; next is to ID the cable wavelength and whether singlemode or multimode. I'm not sure that the mode matters all that much for shorty cables, but it can for long runs. Once you've got those IDed, you probably can find someone local to fab a cable for you.

If ICOM can give you that stuff, you're home free. Otherwise, you may need to look at part numbers in the hardware.

FO cables are pretty much tinkertoys with standard connectors and standard cables, and I'd be surprised if ICOM used something non-std. just to make things more difficult.

Best of luck.

Finding a suitable replacement may be as simple as going to circuit
city or best buy. A lot of audio/video equipment uses fiber optic

```
interconnect cables.

Hi I need to building a 4 ohm 1500 watt "cantenna paint can style" dummy
load for audio and guitar amp work. I have forgotten what type of oil to use
for heat transfer.
Id like something easy to get (like peanut or something with a high
flashpoint).
Don't want to loose the house.

MFJ sells the correct "transformer oil" by the gallon for $30/gal, but the
manual for their version of the cantenna says you can use "mineral oil".

In another life, I worked at a Motorola commercial 2-way radio shop. We used Heathkit Cantennas for all of our test benches. All were filled with mineral oil. Ran that way for years, never a problem.

The idea of using a cantenna for audio is new to me.

I would be inclined to use distilled water for continuous use and tap
water if use is intermittent. Cheap & trivial risks!

As I think back of all the lash ups I have used to build and test
power supplies through the years I think you have led me to a much
more practical solution!

I used 'baby oil' - the local pharmacy had a bunch marked down 80% as
it was close to expiration. It is just scented mineral oil - what
could 'expire' in that?  It works fine in my cantenna, and smells
better than anything else in the shack.

Use mineral oil. Don't use any kind of food oil -- it will go rancid.

Greetings- can someone provide data on their home made choke for connecting
across the output of a 1 KW, 3.5 mhz , transmitter working into 50 ohms.
The so called safety choke to prevent the HV plate voltage from appearing on
the antenna in case of failure of a blocking capacitor. Normally a
commercial 2.5 MHY RFC is used. Perhaps something wound on a ferrite rod.
Thanks, Jim.

You might try calculating the inductance of a choke that presents about 500 to
1000 ohms of inductive reactance of the transmitter frequency. Use wire that
can handle about 2 to 3 times the plate current of the final, or 2 to 3 times
the HV fuse rating.
The math is left as an exercise for the OP.

Hi,

looking for these things:

]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]

MANUALS:

1.)
T-408/URT-12, also called AN/URT-12
Military radio transmitter, Coast Guard

2.)
Conrac model CNA-8
8" black and white video monitor, tube kind

3.)
RCA model TM-9AN
8" black and white video monitor, tube kind

(#2 and #3 are very similar)

]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]

ITEMS:

4.)
50 degree to 110 degree yokes fitting electromagnetic deflected CRTs
that have a "small-shell duodecal base"

5.)
focus coils and magnet assemblied from old TV set CRTs that have a
"small-shell duodecal base"

Referring to the base type of the CRTs is the best I can do to to indicate the diameter of the tube neck, which is about 1.5" The base socket has 12 positions (pins) but not all are used. Usually 6 are used, or 5, in the case of a magnetic focus CRT.

All the yokes and focus devices I am looking for refer to those used on black and white TV sets with this kind of CRT neck diameter. This is really old junque and much has been pitched if the original TV chassis was unserviceable, etc.

These are for a project where I want to operate a 10" electromagnetic deflection, magnetic focus CRT. There are a number of NOS CRTs having interesting phosphors, being from radar sets. Basically I saved them from the landfill, and want to put together a few unusual monochrome video monitors. Why stare at the boxes on a shelf??

For me, driving a yoke is trivial, but finding ones for these CRTs is a challenge.

I have a few 10SP4, which are 50 degree deflection, one 10UP14B, and
some 10VP15 and 10VP47's -FAA spares.

]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]]

I can be reached at the reply-to (un-mung it..) or please find my
contact info downscreen at www.bunkerofdoom.com

thanks,
Patrick

Hi Joe,

I recently revived a Cantenna. When it came time to refill, I considered
mineral oil and decided to go with transfomer oil because of the better
thermal characteristic. Others have suggested that you can buy it from MFJ,
but I found it as close as my local power company. It was no big deal for

them to give me a gallon. ^5

Your audio dummy load sounds interesting. You might consider keeping an eye
on the oil temperature, as my Cantenna gets noticeably warm fairly
quickly... can't drive it at 1KW sinewave for very long. I envision a
thermistor > comparator > audible indicator.

73,
Bryan WA7PRC

Mineral oil works well. The only problem I had was that the extreme
temperature swings where I live put some condensation in the cantenna
and the bottom eventually rusted out. An old paint can works just as
well but doesn't have the fancy graphics on the outside.

The look on the clerk's face when you check out in the drug store with a
gallon of mineral oil - PRICELESS!

The requirements for the safety choke are pretty tame compared to a
plate choke. The impedance level around it is 50 ohms (contrast it
with thousands of ohms around a plate choke), so you don't have to
maintain a particularly high RF impedance.

In other words, the same choke you used for the plate choke would work
just fine.

How about lobbying the ARRL, and I mean strongly, to release the antique
issues into the public domain or at least make PDFs available on their
site, after all QST is an organ of the radio amateur service, and the
old content should not be the gist of profit.

Michael

I've been trying to build a 6m for a few weeks now having the usual
build it from scratch problems. Today I was out in the barn looking
for a suitable plate choke when I found just what I wanted underneath
a chassis, a Z-50 choke. After closer inspection of the chassis I
realised it was an amp using a pair of 6146Bs almost identical to what
i was trying to build. Initial test showed the B+ filter caps shorted
and diodes were bad. Power supply came up fine after finishing the
repairs

I also found part of an old GE lo band VHF transmitter that would also
make a great 6M amp.
power supply seems to work fine. Every thing except the PA (paralell
807s) stage and power supply had been stripped from the chassis.

I was wondering If anyone else had ever started a project to discover
they already had it but didnt know it.

Jimmie

My reasoning for recommending those values is this:
Since the circuit impedance around the RFC is 50 ohms, I figured that if the
inductor presented a reactance around 10-20 times that, it wouldn't upset the
tuning (well, maybe just a tad, but insignificant). The wire in the coil should
be big enough to carry the HV current until the HV fuse blows, without damaging
the coil itself.
If you figure the physical size of a 25-50 uH coil, using wire that can handle
the current, it might be a bit large. A 1-2.5 mHy coil would be very large
(lots of turns of large wire).
Considering the power levels involved, using a magnetic core in the coil would
probably waste a good bit of heat.
If you're going to experiment with inductor sizes, I'd be interested in hearing
your results.

1000 ohms reactance at 3.5 MHz would be almost invisible to the rf output tuning. I have a drawer full of old surplus rf chokes, wound with large wire. Generally one section. About 1/2 the size of a golf ball. I have thrown those in and they work fine. For lower power, a standard 2.5 mh choke is ok, but I like larger wire size for higher voltage and current. The old tuning units from the BC-375 would have a handful of such chokes, with nice ceramic stand-offs.

73, Colin K7FM

There was a review in QST in the past year or so. Rosalie White was the author, I believe.

Hi Homebrewers,
Has anyone ever seen information on modifing the innards of Mitsubishi M67730's.
The top comes off really easily and the input and output filters (which have series inductors and caps to ground) seem to have several positions for fitting the capacitors as though the block is quite wideband and the filters set the bandpass.
Just an idea that these 30 Watt 170MHz units may easily be moved down onto 2m?
Has anyone attempted this?
Thanks in anticpation
Dave

Thanks for reporting back with the results. Glad to hear that the tuning wasn't
upset, and that everything seems to be going according to theory.
Good luck with the rest of the project.

Dunno about modifying them,but some of them will go a bit out of the
specified freq range,with a bit less gain/power output.
I have a 6W 420-450mhz module that works up past 467mhz,and still makes
4-5W output.

I was thinking about using a UPS as a power supply for an amplifier. The UPS is rated at over 2KW and uses 48 volts on the DC bus. I have tried powering an amp directly from the batteries and it seems to work OK. Battery pack is rate at 20 amp/hr. The inverter side of the UPS is dead but the charger side is still functional. The plan is to remove the inverter circuit completely. Can anyone think of anything wrong with doing this.

Might be fun to install a compression type variable cap and see if you
could tune it. It shouldnt be too risky if you keep your drive low.

Do you plan on leaving the batteries in the unit? They act as a large filter capacitor for the unit. If you take them out, you will need to use some rather large filter capacitors to get anything close to DC. If you have an oscilloscope, look at the waveform with the batteries in place and with them disconnected. That will tell you how badly you need filtering.

Good luck,
Paul KD7HB

  It should work OK.  The only problem I see is if the charger is not
regulated.  It probably is to keep the batteries from overcharging.  I
bet that baby is heavy.
  I have found a 48 volt 20 amp supply that I use with my EB104 Amp
that is about 8 lbs.  The Amp itself is about 5 lbs., so I have 600
watts out in under 15 lbs. or .4 oz./watt.
  The power supply is less than $300 USD including shipping.  If you
want more details, let me know.

Series inductors and caps to ground indicate a low pass filter. The
arrangement
sounds like a harmonic filter. You probably can go lower in frequency with
no
changes.

Many members are correct. I have never done anything like this, and
there is considerable danger in what I am considering. Why would I
want to try such a foolish thing?

The nature of the experiment is to test the feasibility of beaming
power to a Thermoacoustic Engine. The ultimate goal is to power a
climber to compete in the elevator2010 contest where first prize is 1
million bucks. Now I don't expect to power a 100 pound climber with
one 1000 watt magnetron. The oven magnetron was only to test the
concept. For the real thing one would need a Burle S95608E100

Elevator2010: http://www.spaceward.org/elevator2010-pb.html
Burle 100K Magnetron: http://www.burle.com/cgi-bin/byteserver.pl/pdf/s94608E=
100.pdf
Thermoacoustic Engine: http://www.io.com/%7Efrg/tac.htm

Cheers,
Bert

The quick way is to build a converter to translate the 144-148 MHz signals to the aircraft band.

A very nice AK #32 less tubes + Collins, Military TM's, Halli manuals can be see at:

http://search.ebay.com/_W0QQfgtpZ1QQfrppZ25QQsassZheytubeguy

I have additional antique radios (about 20 or so) that need new homes as a possible move

is in the very near future. Larger units will require something like UPS Store to do packing and shipping. Stop by and take a look. Heytubeguy

You will find that most hams use FM and some hams use SSB and very few
hams use AM.
Your aircraft radio is AM.

Bill K7NOM

There seems to be quite a lot of material on the web for this topic
and I suspect some practical solutions. Also while perusing Usenet
archives on another topic I found this list from a french newsgroup
which may be useful if the links haven't succumbed to bit rot
(haven't checked them):

MAGNETRON
Beamed Microwave Power Transmission and its Application to Space - http://engineer.tamu.edu/tees/csp/wireless/70dec5.htm
Book 11 - http://www.tpub.com/neets/book11/index.htm
Communications & Power Industries, Beverly, MA - http://www.cpii.com/bmd/magoper1.htm
EA6VQ - Phase locking a microwave oven for EME use - http://www.qsl.net/ea6vq/oven.html
High Power Converter of Microwaves into DC - http://jre.cplire.ru/iso/sep99/1/text.html
How To Test The Magnetron Tube - http://www.gallawa.com/microtech/mag_test.html
Ingolf's Web Presence Links across the net - http://www.ee.sun.ac.za/ehg/imeier/links.html
MILAX Fuel-free Flight Experiment - http://www.kurasc.kyoto-u.ac.jp/plasma-group/sps/milax-e.html

Michael,

Thank you very much for the info and links.

I am forming up a team to compete this year. If we don't compete this year we will enter next year. So far I have 3 people from work (Lockheed Martin) including myself,one from IEEE, and a person that has competed in previous elevator2010 contests(http://www.spaceward.org/elevator2010.html). If you know of anyone who is interested in joining our team (Especially if they know how to design High Power RF/Microwave Antennas, Dishes, and Horns) please shoot me an email at: hcm1955@gmail.com

Thanks,
Bert

SolderSmoke!
A SHOW FOR ELECTRONICS HOMEBREWERS!

http://www.soldersmoke.com

Listen at: http://www.soldersmoke.com

SolderSmoke #75
January 27, 2008
"A Nonlinear History of Radio."
Fessenden's mic.
Clustr Map.
BANDSWEEP: Lunar Echoes at 6.7 MHz.
Winter SPRAT.
HALO Balloon.

AO-16 Satellite goes DSB.
Calling CQ on Chinese repeaters.

MAILBAG: AA1TJ setting up Tunnel Diode beacon.
Kevin, M0KHZ builds in an 18th Century Shack.
Steve, G0FUW, listens from Ascension Island.
Lars, OZ1CX, has THE KNACK.
WA7MLH Builds a Superhet on YouTube.
Waza, VK2HDH, calls in on Echolink.

PART III: Andy, ZS6ADY, on Boatanchors in South Africa.

A SPECIAL ENDING: A 1979 song by Mike, KL7R.

Tired of listening to Blondie or the CHU on your I-Pod?   Wouldn't you like to be able to carry with you the kinds of ham radio conversations that you listen to while in your radio shack? Tune in to SolderSmoke!

RSS FEED: You can subscribe to the program, have them downloaded to your MP-3 player, and listen to them at your convenience. To subscribe, just cut and paste this URL into your I-poder (or similar) software.
http://www.soldersmoke.com/soldersmoke.rss

If you don't have an MP3 player you can just go to the site below and listen to the latest program (and earlier editions) using the audio software on your computer.

http://www.soldersmoke.com

All the programs are available here.

I hope you enjoy the program. Please send us feedback.

You'd be far better off looking at the wideband pocket scanners that are
now on the market. These cover from the broadcast band up into the
UHF regions and are multimode as well.

Anyone know of a 144Mhz front-end circuit with the output at 10.7Mhz?

Or a good 144Mhz front-end circuit that can be altered to output at 10.7Mhz?

I've got a complete homebrew RX, (PMR parts) but I do wonder if I could do to change the front-end from xtal control to a tuneable front-end.

Hello,

I build this (http://oh8jep.kotinet.com/eb104/pw_eb104.gif) power supply for the EB104-amplifier. Unfortunately I can't get BUX22 and so I used BUX98A.

The transformer-output is a little bit lower, so the DC is 62V. But the supply works and I get 50V output. So far so good.

My eb104 is still not assembled, so I tested the supply with two Osram halogen lamps HLX64655 250W and 24V in series connexion.

When the lamps are connected and the transformer is connected to the mains supply sometimes the lamps will light. The current ist ca. 11 ampere. But the current behind the rectifier is 21A!!! But the output voltage is still 50V.

Often the lamps will not light an the voltage drops down to zero.

If I try four lamps, a series of two parallel lamps, they never light.

When the lamps are not connected and I connect the power supply to the mains supply and after that I connect the lamps the voltage drops always down to zero.

So you see, a lot of problems.

Any hints?

Vy 73 Holger/ DL9HDA

I have an ex AM PMR radio that I wish to use on 144Mhz. I need a PSU feeding 24V @ about 300mA.

Are switch-mode powers supplies alright or are they too noisy to be used for receivers? TIA.

Some switchers are very good, some aren't very good at all. One friend
has the Icom PS-120 (I think) for his Icom transceiver, and finds it
to be so noisy as to be unusable .Other friends have other switchers
and find them to be OK, and a third group find them somewhat noisy,
but tolerable if you don't mind tuning around the birdies.

I use a Samlex 30-Amp switcher to drive my Yaesu FT-897D in the shack,
and it's just fine above 500 KHz or so. It *does* put out some hash in
the 20-500 KHz region; my SDR-IQ receiver's waterfall display shows it
quite plainly.

You may find a linear-mode supply (xfmr; half-wave, full-wave, or
bridge rectifier; filter) to be better for your use; I don't know of
a lot of 24V switchers. Certainly a linear supply will be quieter if
done well, as the only noise will be from ripple that gets through the
filters, and the tiny bit of hash from the rectifier junctions turning
on and off.

You are almost talking about a wall-wart there, aren't you?
Or, possibly, a desktop 'brick' PS.

> Are switch-mode powers supplies alright or are they too noisy to be
> used for receivers? TIA.

Just make sure the PS is enclosed. And, use ferrite beads/doughnuts on _all_ input\output wiring. And, it wouldn't hurt to put .001 uF bypass capacitors on that wiring, too, betwix the ferrites and the PS.

My venerable IC-551's (6M) internal power supply went kah-kah and I replaced it with a switched-mode PS from Marlin P Jones:

http://www.mpja.com/

That was some time ago, but what I bought was similar to:

http://www.mpja.com/prodinfo.asp?number=16001+PS

My original requirement was _size_. I wanted to stuff the new PS into the same cavity in the IC-551 where the old PS came out. So, having installed the new switched-mode PS _inside_ the rig -- with all the install 'details' I listed above -- I saw no appreciable rise in the no-antenna-connected noise floor.

Plus I could 'tweak' the output voltage -- setting it at 13V -- and "amp up" that IC-551 to a blistering 11W or so. HI!HI!

I encouraged a feller in Kansas to do likewise with his IC-251 (2M) that had a dead PS, and he reported similar success.

Of course, YMMV

Some are, some are not. You have a lot of choices available at 300ma.

I have a problem with my ICOM 735 transceiver. It has done me well for 23 years now, but just recently I have noticed raspy CW and SSB signals on receive, on an intermittent basis. This problem comes and goes, often in long intervals and does not seem to be affected by temperature. It sounds simply like an unclean signal with a raspy note on top of it. I am so far unable to determine if this affects my transmit signal or not, I did get a poor report once during this condition, but during another transmission at another time I did not. I have the complete service manual for this rig, but am a bit unsure where to start.

Any ideas appreciated.

Probably you have to replace plastic trimmer capacitors C37, C45, C52, C59 and C138.

The receiver I'm building uses switchers internally to take 5V down to various other voltages. Total power supplied by the switchers is around 20 watts. They're little open modules. I can "see" the fundamentals (200kHz-700kHz range for these supplies) and the first few harmonics if I go looking for them, but they're certainly not an issue at 144MHz. With enough shielding and bypassing (done right), I suppose any switcher would be clean enough. With a switcher of good design, you won't even need any additional shielding or bypassing.

Cheers,
Tom

I came into a large hatful of indicators made by Mercer Electronics, a division of Simpson Electric.

These are small (under 2" overall width, mount in a 1.425 x 0.8 " rectangular hole, and have a meter-style movement driving a cylinder mounted with axis parallel to the front of the device, rather like a roll of paper towels. Current drives the cylinder, and a DayGlo red-orange flag printed on the cylinder changes position. I have three varieties:

Zero Indicator   Cat. # 11338 model 510, 50-0-50 microamps, zero center
The cylinder has two opposing solid-color arrowheads, which are in the center of the viewing area when no current is applied.

Tuning Meter Cat # 11220 model 510, 0-100 microamps
The cylinder has a single triangular colored area, such that increasing current increases the red area displayed through the window (leading edge of the triangle moves to the right, like the speedometer in our old Pontiac).

Another variety not with me here at work, with 20-10-0 marks along the top edge of the viewing area and 0-10-20 marks along the bottom edge/ It appeared to be zero-center, and used for tuning or something.

Anyone know anything about these?

You can tweak up the power on a 24VDC switcher to cover the headroom for a linear regulator following the switcher. This is an old technique - and still used. My preference would be an adjustable regulator with the adjust pin bypassed with 10uF. Linear Technologies has some regulator chips that out of the box have noise lower than garden variety LM317/337.

You may have to shield the supply --

I tried one that created all kinds of interference. I was able to
solve the problem by installing caps in parallel with the rectifiers, .
005uF disc I think.

Jimmie

Hi Jimmy.
Harold is just about right for class AB1. You can get a bit more out in
AB2 with a small grid current but I don't reccomend it. Remember to keep
your cathode leads short and well bypassed.
   The best way is to have a grid current meter and NOT to run the stage
into grid current.
  The 6146 especially the B type can be a bit unstable otherwise. I
found that my old Kenwood 820S doesn't like them in the final. The
original Japanese S2001's though apparently similar to the 6146B work
much better.

Back in the 50's there was a very popular TWO tube mobile transmitter
used by several mobile operators on 3995... Developed by Bob Carter,
W6NTU who lived up on the side of Mt. Hamilton near San Jose... It
used a12AT7 driving a sweep tube... Several of the fellows in addition
to a variant of sweep tubes, used a 6146 and an occasional 2E26 in the
final as well depending on available plate voltage... Half of the
12AT7 was the Oscillator, the other half was modulator... Carter
Modulation transmitters were very popular due to their simplicity and
performance. When loaded a bit on the heavy side, the audio sounded
quite good... Go to:

http://www.geocities.com/ResearchTriangle/Lab/4513/carter.html

For a bit of History and a schematic of the transmitter... Remember
load that lil sucker fairly heavy with very little perceptible plate
dip for best audio results...

Good Luck de Grady K6IXA

Seems like i read somewhere the EB104 didnt work best at 50 volts, I
believe it was 41 volts, maybe lower.

Howard probably knows about this.

Try these URL's

http://www.epemag.wimborne.co.uk/solderfaq.htm

http://www.qsl.net/iz7ath/web/02_brew/14_howto/04_rec/index.htm

I use these

The usual way is to use a desoldering pump or vacuum pump which works like a small spring-loaded bicycle pump, only in reverse!

An excellent alternative to a pump is to use desoldering braid, including the famous American "Soder-Wick" (sic) or Adcola "TISA-Wick" which are packaged in small dispenser reels.

I assume that this means 41 volts gives the best IMD figure, not the lowest drive or highest power output. Maybe this is also a safe operating point with higher voltages requiring much more in the way of a heat sink or fan for safe operation without having to reduce the zero signal current to the point of more cross over distortion.

I've been using braid as I haven't had good results with the solder
sucker devices. I was hoping that some magic secret would come forth!

Man that guy with the second link must have some junk box!

Many thanks for the reply.

Hello. Am looking for a copy of the "Technical Correspondence" column
from July 1993 QST. The local library only keeps the most recent 5 years

of the print issue. Could anyone please send me a PDF? It is follow-up correspondence to KI6WX's article on the Tandem Match power/SWR meter from January 1987 QST. I'm interested in building up just the forward power detector for the home workbench.

Please send to K9LY at placeholder dot net , but use comcast instead of the obviously fake domain name. ;-)

Tnx & 73,
Joe K9LY

Hi, Dave.
Solder suckers are mainly for clearing holes in circuit boards using
through-hole components. Braid is used for clearing solder from
circuit board pads, either through-hole or surface mount.

I own a small electronic assembly service and my people generally
begin a circuit board clean up by applying appropriate flux to the
solder, then heating with a hot iron applied to solder-wick. Sometime
the addition of a small amount of additional solder will help get the
job started.

This procedure works for both lead solder and lead-free solder. Just
use the appropriate flux and solder-wick. Lead-free needs a very
aggressive flux and a really hot iron, so ventilation is imperative!

THats what I thought too but I wasnt getting the plate current I should be getting. I figured I may have a design poblem since this was a new amp still in the design stage. A few math errors on my part muddied the waters even more. At first I calculated my drive voltage from my transceiver very close to 45 volts, my bias voltage. Then I recalculated it again once I started having problems but this time got 36 volts. Well, 45 was correct but I wasnt getting that much, more like 35. The problem wasnt a design flaw though. It was just a cockpit error on my part. I was running my transceiver off of 12 volts instead of 13.5. This made quite a bit of difference in my output.

Now to get this ugly saftey hazard put together so I can use it without risking family and pets.

Jimmie

The only secret I know is that you need to have ALL of those desoldering techniques available. DON'T have a favorite technique, but always pick the best one for each individual solder joint.

The most important question is: which do you value the most - the parts that you're trying to desolder, or the board itself? That radically changes the range of techniques you might wish to use.

If you're stripping a board for parts, then the heat gun method works quite well for large IC packages. It doesn't matter if you cook the board because it has no value to you.

But when you are replacing a defective device to repair a board, it's completely the other way around. Now you have to protect the board and all the other good parts, and it's perfectly OK to destroy the defective device to do that.

For example, one of the best ways to protect the solder pads and plated-though holes is to cut through all the pins of the device first, using very sharp-pointed cutters or an X-acto knife. Throw away the body of the package, and then you can desolder the remaining 'stubs' one by one, with much less risk to the board.

Their noisy period, but you might get away with it on 2m. But you will
still be QRM'ing everyone else...
Hold AM transistor radio next to it, have a listen as you tune across
the band....not nice, lots of spurs with rich harmonic content...

Its your choice. The dark path or the light path of Radio Karma....

I use a 12V switcher with my FT-817D, it's very quiet.

You were lucky - you got a quiet one. And its the luck of the draw,
unfortunately.

How come we have all been conned into these switchmode things? - by
their very nature, without a lot of effort, they are noise generators.
Their cheap to make, thats their only advantage - everything else is
part of the spin cycle. And if it works on 2m and above, fine - you
will just be adding to the already horrendous RF pollution from
thousands of the bloody things already on HF - the suburbs are getting
unbearable, S9 plus noise, every night, on 80m.....160 aint to crash
hot either...

I refuse to have to work on a power supply to get it quiet enough to
be used with a radio. I am interested in the radio, not fixing
shortcomings in design of things that , by their very nature, are
unsuitable to be used near radios. That sucks. Linear technology is
far easier and quieter...

There's another advantage of a switching supply that is very important to some of us: efficiency. The receiver I've been working on runs from 5VDC, but I have to supply power at 1.0V, 1.2V 1.8V, 2.5V and 3.3V, and each one of those uses a switcher. A linear regulator to 1V from 5V will result in a supply that's 20% efficient. The switcher I'm using for that supply is about 87% efficient under its operating conditions. If I tried to run all my supplies with linear regulators, I'd have to supply over twice the power; it would come close to violating the power rating of the 5V supply, and power dissipation in the receiver would result in excessive heat rise.

But even with all those switchers, the only spurs greater than about -145dBm (antenna-input-referred) and greater than 1.5MHz are from digital circuits, not the power supplies. -145dBm is, I believe, 20dB _below_ S1 by usual definition of the S-meter units. Even the power supply fundamentals are only at about S1. And the supplies are not themselves shielded. (The receiver RF circuitry is, of course, as is the whole receiver module.)

I would be much more circumspect about using a switching supply in a homebrew receiver that was going to be used where power dissipation wasn't an issue, but then I'd do a lot of things differently than I have for such a receiver. It wouldn't keep me from using switchers; I'd just look at the whole design in a different way. On the other hand, finding ones that would be adequately quiet for a 144MHz receiver should not be difficult at all.

Cheers,
Tom

I've used solder suckers for over 25 years now (man that makes me feel
old) You need top make sure that the sucker has a good seal on the
plunger, if you block the tip with your finger it should stop the
plunger if you hit the trigger.

  Another essential tip is to make sure you have enough solder on the
joint, it's often difficult to remove existing solder if you don't add
some more, don't worry unduly about leaving solder behind, you can clean
that up later with either wick or the sucker.

  Make sure the joint is molten, get a good iron with a high heat
capacity, I.E. one that maintains it's temperature when you put the tip
on a cold lump of solder. I use a Weller W60D for almost everything
(including reworking TSOP chips! Bet you can't tell it's been worked
after I've removed the flux either.) with, IRC, a CT7 tip . Once the
joint is molten try to move the pin in the hole, if it doesn't move then
most likely the joint isn't molten, it's unusual for a pin to be a tight
fit in a hole. Pre-heating a board can help immensely with 'difficult'
boards

If you get all the above right, once you get the 'knack' you'll be able
to desolder leaded components from multi-layer boards with internal
ground and power planes with ease without damaging either chip or board.

Is there a good way to salvage good IC's from a junk board without a heat gun? I've tried solder wick but I always seem to spend so much time with desoldering each pin that I cook the IC, even if I can remove it.

Thanks, Nelson

> Would you nice folks point me to a good how-to on desoldering?

You guys are great! Thanks for the tips, I think I've learned something today.

I guess that my major hang-up has been getting the hole clean after I've chopped up the component and removed the leads from the board. Why didn't I think of using a solder sucker there?????

A toaster oven works great for getting surface-mount stuff off, or
(if you've put solder paste on the pads) for soldering SMD stuff.

I tried to post on the antenna group but most of the conversation over there seems to remain on a rather esoteric (and pedantic) plan.

So I'll try here (hope that's OK)

I had a QSO with a VE who uses a "SpiderBeam" which I had never heard of.

Apparently it is a folded modified Moxon design wherein the reflector
and director elements (made of wire) are folded back toward the center
of the antenna

```
     _______
     \     /
      \   /
    ---------

      /   \
     /_____\
```

I am actually proud of that drawing (!)

It comes as a kit that you construct with fiberglass tubes ,etc.

It is reportedly used a lot in DXpeditions.

Now they have a "home version" that is a little more sturdy.

Has anyone used it and care to comment?

Much appreciated

John

They used to be "common as muck", and I bought loads of them from Henrys
Radio, (202 Edgeware st, London). But that was more than a couple of years
ago, since then I have moved house several times, moved country, had a
divorce and had all my belongings stolen.

Does anyone have any AEY11 or AEY12 tunnel diodes left? I cant seem to find
a supplier anymore.

Many of these devices are about 30 years old, and a friend in the semiconductor industry speculated that, in that time, their extreme doping gradients may have relaxed by diffusion. So even if you could find some "new old stock", their characteristics may have changed significantly.

There isn't any hamband for the magnetrons you are likely to get
your hands on, so it would be illeagal for you to 'beam' anywhere.
Multiple mags don't like to 'lock up' very well in pulse duty and
you surely won't be running any microwave oven mags in cw mode.
How would you verify if your kluge monster was in fact locked
together? Got any ghz range spectrum analyzers handy? Most mags

designed to be used in parallel power production have a built in injection probe with an SMA or BNC fitting right on the mag. So you are going to be beaming, and receiving with what? A spark gap? You don't need, and couldn't handle the power of multiple magnetrons. You can blow up every solid state device in your workshop just by tearing the front door off your microwave oven and jumping out the interlocks. Do you realize the body of the magnetron is the anode and you will probably electrocute yourself before I can find a sound reason for anybody but a genuine rf engineer to try putting two magnetrons in phase lock parallel operation? Far longer would you live throwing 20 pound propane tanks into a fire and see how far they 'beam'.

Hello Pete

AFAIK there is no set of formulae which will do the job for you. What follows comes from E.C. Snelling, "Soft Ferrites: Properties and Applications", 2nd ed, 1988, p 155. Sadly this book's quality is exceeded by it's rarity.

Snelling starts off by saying that the inductance ratio mu(coil), or apparent permeability, of a coil when it has a ferrite core is diffiult to calculate, "since it depends upon on the geometry of the winding and the core and to some extent the core permeability".

Snelling goes on to present a simpler approach which "applies only to centrally placed windings". He starts by assuming that a "magnetically long cylinder" is covered over its whole length. (I do not know if these means that the coil is tight wound or not, or even whether this matters). He then goes on to state that the inductance of the coil is proportional to mu(rod) times the area times the number of turns squared divided by the length of the rod.

He then presents curves based on experimental data, based on coils where the centrally placed winding covered 5-100% of the coil, the initial permeability ranged from 15 to 1000, and the length/diameter ratios of the rod varied from 3 to 18. The results are shown on p. 155. Snelling comments that using the mean curve will produce an error of 12% or less.

The curve plots 10exp09 times L / (A.N.N.mu(rod)), against the fraction of the rod which is covered. The approximate values (fraction of rod covered first) are:

0.1	2.75
0.2	2.25
0.3	2.1
0.4	1.85
0.5	1.7
0.6	1.5
0.7	1.35
0.8	1.15
0.9	1.05
1.0	0.95

Note that you have to calcluate mu(rod), which depends upon the initial permeabilty of the ferrite, and the demagnetization factor. The demagnetization factor depends up the length /diameter ratio, and to some extent the intial permeability of the rod. You can read the demagnetization factor off a chart (Snelling p. 151), or read mu(rod) directly from a chart based upon the initial permability and l/d radio (Snelling p. 152). You will see the same chart at, eg,:

    http://www.magneticsgroup.com/pdf/erods.pdf

To calculate mu(rod) you would have to able to calculate the demagnetization factor. I do not know how to do this. The calculation of mu(rod) is straightforward once the demagnetization factor is known.

Apparently the whole process above is only approximate. If you slide the winding away from the center of the core, then the inductance will decrease.. By how much I do not know. BTW, was this the way in which the coil inductance was adjusted in LW/MW radio sets during intial alignment?

I also vaguely recall reading some work done by W.J. Polydoroff on the inductance of coils with ferrite cores. A paper in 1945, and a book in 1960 come to mind. He took a slightly different approach. In those days the permeability of ferrite was relatively low. I have never compared his approach to Snelling's to see if they give approximately the same results. If I can find the stuff here, I will look a little harder.

Bzzzt, Wrong assumption, would you like to try for what is behind Curtain #2??????

ALL Consumer Microwave Ovens are using CW mode.... just where did you get your idea, that they are pulsed from????? Your a Dufus.....

 Hey dumb ass, they are running from 1/2 wave voltage doubled a.c.
and conduct on only 1/2 of the a.c. cycle. That isn't C.W. by the
definition of C.W. I'd call that a 50% duty cycle output which
is NOT c.w. by intelligent minds.
```

I didn't indictate that they were being pulsed either, I stated that 'pulsed magnetrons' don't like to lock up correctly. That is why in extremely high power radar we no longer use multiple mags, and never really did. Klystrons, klystrodes, and crossed field amplifiers are the norm here. I'll bet my ETC and four gold service stripes I forgot more about mags and waveguides than you ever knew.

The original poster seemed clueless and a danger to himself and others with his experiments. Exactly the kind of guy you should have as your C.E.O. of your 'New and improved c.w. microwave oven' company.

Can't help thinking how much you look like your uncle dad! I don't think you were ever one of my Seaman Recruits. I would have taught you better. (In your words 'learned you gooder') Dufus, yup, I been called worse, it kinda bounces right off my rocker and lands where my crow can crap on it.

This all reminds me, back in the early 90's I dropped back to college for some refresher courses. Circulating on the net was a picture of supposed NY policemen posing with a microwave oven with a horn antenna attached to the front--looked as if it was constructed of sheet metal.

The article spoke of this "weapon" being used by one neighbor at another apartment neighbor ...

Anyone remember seeing this particular article? I have search the net several times and unable to find it. It may have even been a fraud, but was well done if so.

Anyway, I would get a kick out of seeing it again and making it available for others to view.

Regards,
JS

I noticed the local library is getting rid of it microfilm copies of
magazines replacing them with CDs. It probably wont be long until illegal
copies of all the ham mags are all over the net.

Hi

the inagural issue of Communications Quarterly Magazine ran an
article on phase locking microwave oven magnetrons for ham
use.

Regards

Thanks for making the databooks available, but boy
Rapidshare.com is sure a pain in the a$$!

20 minutes minimum between downloads, and a 2 minute
timer to make sure you sit and stare at the screen before
entering a code you read off of the screen.

Bah!

-Chuck

Thanks John,

I appreciate the info. I had a couple of databooks/textbooks about this years ago, but of course in my infinite wisdom I gave them away a few years back. I didn't think I would need them!

Hello Pete

AFAIK there is no set of formulae which will do the job for you. What follows comes from E.C. Snelling, "Soft Ferrites: Properties and Applications", 2nd ed, 1988, p 155. Sadly this book's quality is exceeded by it's rarity.

Snelling starts off by saying that the inductance ratio mu(coil), or apparent permeability, of a coil when it has a ferrite core is diffiult to calculate, "since it depends upon on the geometry of the winding and the core and to some extent the core permeability".

Snelling goes on to present a simpler approach which "applies only to centrally placed windings". He starts by assuming that a "magnetically long cylinder" is covered over its whole length. (I do not know if these means that the coil is tight wound or not, or even whether this matters). He then goes on to state that the inductance of the coil is proportional to mu(rod) times the area times the number of turns squared divided by the length of the rod.

He then presents curves based on experimental data, based on coils where the centrally placed winding covered 5-100% of the coil, the initial permeability ranged from 15 to 1000, and the length/diameter ratios of the rod varied from 3 to 18. The results are shown on p. 155. Snelling comments that using the mean curve will produce an error of 12% or less.

The curve plots 10exp09 times L / (A.N.N.mu(rod)), against the fraction of the rod which is covered. The approximate values (fraction of rod covered first) are:

0.1	2.75
0.2	2.25
0.3	2.1
0.4	1.85
0.5	1.7
0.6	1.5
0.7	1.35
0.8	1.15
0.9	1.05
1.0	0.95

Note that you have to calcluate mu(rod), which depends upon the initial permeabilty of the ferrite, and the demagnetization factor. The demagnetization factor depends up the length /diameter ratio, and to some extent the intial permeability of the rod. You can read the demagnetization factor off a chart (Snelling p. 151), or read mu(rod) directly from a chart based upon the initial permability and l/d radio (Snelling p. 152). You will see the same chart at, eg,:

http://www.magneticsgroup.com/pdf/erods.pdf

To calculate mu(rod) you would have to able to calculate the demagnetization factor. I do not know how to do this. The calculation of mu(rod) is straightforward once the demagnetization factor is known.

Apparently the whole process above is only approximate. If you slide the winding away from the center of the core, then the inductance will decrease.. By how much I do not know. BTW, was this the way in which the coil inductance was adjusted in LW/MW radio sets during intial alignment?

I also vaguely recall reading some work done by W.J. Polydoroff on the inductance of coils with ferrite cores. A paper in 1945, and a book in 1960 come to mind. He took a slightly different approach. In those days the permeability of ferrite was relatively low. I have never compared his approach to Snelling's to see if they give approximately the same results. If I can find the stuff here, I will look a little harder.

73 John KC0G

> I didn't indictate that they were being pulsed either, I stated that 'pulsed magnetrons' don't like to lock up correctly. That is why in extremely high power radar we no longer use multiple mags, and never really did. Klystrons, klystrodes, and crossed field amplifiers are the norm here. I'll bet my ETC and four gold service stripes I forgot more about mags and waveguides than you ever knew.
>
> The original poster seemed clueless and a danger to himself and others with his experiments. Exactly the kind of guy you should have as your C.E.O. of your 'New and improved c.w. microwave oven' company.
>
> Can't help thinking how much you look like your uncle dad! I don't think you were ever one of my Seaman Recruits. I would have taught you better. (In your words 'learned you gooder') Dufus, yup, I been called worse, it kinda bounces right off my rocker and lands where my crow can crap on it.

Ok Smart Guy, just tell us ALL about how CW means that once you turn the RF emitter ON, It must stay ON with 100% duty cycle. Since every HAM Knows that CW doesn't mean 100% Duty Cycle. Where did you get the Idea that the OP would be using the Oven Magnitrons Power Supply, as is, instead of building his own, and running it Full Wave, at 100% Duty Cycle? He doesn't say one way or the other, so your ASSUMPTION is just that, another one of your Flab over Beltline Dufus assumptions. Your explanation is nothing more than Cheap Squid Crap..... that comes from all that Gold Striping that hangs off your sleeve..... Good thing that the Navy keeps you locked up, down in the bilge, and not teaching Young Sculls full of Mush, the basics of High Power RF Generation.

Sonny, you got a lot to learn, best you go back to A School, at NAS Memphis and try again, to get it right...... It is amazing to "Me" that the Blue Canoes, can even find their way out of harbor, if your an example of their ET's, and Radarmen. Fortunately for the rest of us, it would seem that our Navy has some better folks than you running the show........ and have for generations........ by the way...you would lose your bet..... Sonny.....

Now if only someone would post the RCA Transmitting Tube Manual
I could get ride of my, very ragged copy, that is Thumbed to death.

Hey Michael,

Somehow, it never showed up. Did you send it to my Hotmail or my other one
(with the extra spaces in it)? Could you try it again?

Many thanks,

Dave

Kind of a strange side note to the syncing issue,
There are commercial microwave ovens that use 2 magnetrons. These ovens are usually in food courts of large business offices or factories. They are 220vac powered of course. Since a single mag oven produces power only on a small portion of one half of an a.c. line cycle they did a neat trick in the twin mag ovens and switched the line connections to one power transformer. (the ovens have two complete and separate h.v. supplies) So one mag makes power on the positive half of the line cycle and the other makes power on the negative half of the line cycle. Strangely enough I have run into several units having the same 'in phase' line connection (by accident or tampering I guess) and they still work fine. Both mags tightly coupled to the cavity producing power at the same time on the same half of the line cycle. Talk about injection locking!!! 2 mags looking right at each other, and I have not found their service life to be any shorter but they take longer to pop popcorn. Probably several reasons for that, but a differance you can see and measure with a watch. Just by switching the primary transformer leads back to the 'normal' out of phase condition popcorn gets done faster.

I picked up an extra contract which only took a portion of the man hours
I had alloted--the wife needed a new car, this made that possible--got
that for her, she said, "I feel guilty, what would you like?"
MUHAHAHAHAHAHA!!!!

The rest is history ... I have downloaded the manual offline and will be
ready to put it to work as soon as I have it from the box!

Will let 'ya know!

Regards,
JS

Here's a great site with detailed info about ferrite rods.
http://www.bentongue.com/xtalset/29MxQFL/29MxQFL.html

Here's a long list of articles by the same author.
http://www.bentongue.com/xtalset/xtalset.html

The home page of all the above.

Hi Guys,

Anyone know where I can buy the 50mW TX and RX modules - I believe
they are controlled using I2C.

I don't need the external uP and PCB - just the modules themselves.

The modules are around 1.5 x 2", housed in a tin box with feedthroughs
for signal and control. RF is on an SMA.

Manufacturers name and model number would also be very useful to help
with an eBay search...

Many thanks,

Mark

Mmmmm...given how long I own my radios, and given how quickly pc
hardware improves, I'd probably go for the model that doesn't include
the integrated PC.

The firmware is upgradeable, they promise to allow you access to any new versions of the SDR software.

The CPU is an intel dual core; Just how much processing power do you need to run a radio? But then, you can cruise the web on this "radio!", run other apps (think EZNEC here), etc.

Also, if you need to control it remotely, you can still do so from another computer via firewire (say put the transceiver in your trunk and run it from a laptop in your passenger compartment), LAN, or WAN--wireless-ly. Indeed, you can control this rig from anywhere in the world using VOIP!

Personally, I thought it time to buy. Will certainly beat anything I can homebrew here ... your mileage may vary.

Regards,
JS

No that's not it at all. I live in Lebanon, Pa and the local radio
station hijacks my shortwave rcvr in FM mode all the time. More watts
means more listeners!

I'm curious about how I might modify say my Aviation Radio (my hand
held spare I keep in case of lost electric in an aircraft). To pick up
amateur bands as well as the Aviation bands.

I'm not interested in the slightest as to whether or not this is
legal, I'm simply looking for educational purposes.
I wanted to get one and then I became curious ... as to how difficult
it would be or how it would be done, what kind of reading I would do
if I wanted to build/modify any radio etc.

Well, Yaesu USED to make a handheld aviation/2M radio, but they don't
anymore. I believe it was a model VXA-xxx (can't remember what number
the x's were). Might look on ebay.

One problem you'll have is aviation band is AM and the 2M ham stuff is
generally FM, so you'd need to build an FM detector. Not sure if you
could "hack" the microprocessor to tune up to the 2M band...

As I understand it, aviation radios use frequency modulation. If you are interested in the vhf or uhf amateur transmissions, then you can build a simple converter in which the portions of the bands you are interested can be converted to be presented in the aviation bands.

Your best bets for dealing with other modulation modes such as cw and ssb is to either buy an older transceiver or shortwave receiver with beat frequency oscillator (or ssb reception). Alternatively you can get a receiver kit or build a simple regenerative receiver.

In both cases, an investment in the ARRL's Amateur Radio Handbook is advisable. An edition after about 1990 (they are done yearly) would be appropriate.

Aviation radios are 117-138 MHz AM modulation. You can either cut some diodes in the PLL to move them to 2M (144 MHz) or put in new crystals to move them to 2M. But... there isn't much AM activity on 2M (no insult intended for the AM diehards, I appreciate their efforts) it's almost all FM and you won't be happy. AM demodulators kinda sorta will demodulate some FM signals legibly but you won't have the fine-tuning controls you'd need to do a good job.

All the HF bands will use predominately CW or SSB or other digital modes that are not demodulated well by an AM receiver. While there is some AM activity there too, your aviation receiver's front end would never let you receive on the HF bands.

Steve:

You know I can hardly wait to lay hands on the darn thing; and, you know it will live with me for a day and, THEN, I will have the case off it.

You did see the sentence which acknowledges it has an ITX board in it (a miniature motherboard!) In effect, I am just buying a computer which knows how to be a radio ...

I tell you, I think it is enough. I do believe I will be happy with it. It is NOT like buying gold, I know it has a life expectancy and one day that will be $0.01 USD.

Still, I will be happy for a bit ... as I said, you mileage may vary. I walked into this deal with my eyes wide open ...

Warm regards,
JS

"Print to PDF" from a point-and-drool browser for each page isn't
really necessary - all the pages are just JPG's, just download all the
JPG's (e.g. wget) and then assemble into a PDF (e.g. any of the
freeware tools that convert JPG's into PDF pages from a command line)
if that's what you want.

If you really cared about the newsgroups, bozo, you wouldn't be posting off topic junk to them.

This is no better than when you posted about dog food to rec.radio.shortwave, and then turned around and changed your user name so we'd think you were someone else.

Just because idiots abuse the newsgroups is not a reason for other idiots to follow.

You didn't need to add anything to this thread, and keep it off topic.

You certainly didn't need to change the subject header so it looks like you are starting another thread, a completely off topic thread to boot.

YOu could also consider that some idiot cross-posted this thread in the first place, which is always a good reason for off-topic junk to start up, and by adding to that mess, you just continue it all. Usually, if it's cross-posted, you shouldn't reply (since virtually no cross-posting serves a purpose, it is indeed the mark of someone too lazy to find the appropraite place to post).

Finally, the only way you could be dazzled by the idea of someone making tubes at home is because you lack depth beyond your ability to post links.

YOu saw it posted somewhere else, I don't for a minute believe you found it through hard work on your own behalf, and like other people decided it was "too good" to not post in yet another newsgroup, just like others before you posted to other newsgroups where you found it.

Come up with something original, like the exact date of that 1964 article in QST (or perhaps it was CW) where there was an article about an Argentinian who made tubes at home. Because then you'd prove this isn't a sudden and new thing, despite the internet wrapptings, and you'd actually add something to the discussion, beyond an ability to use search engines.

Or spend some time in a used book store, finding and then buying the books that might be relevant to the discussion, and then start making the tubes yourself.

  Michael VE2BVW

Hi,

Does anybody have a copy of the April 1977 QST? The article I am interested
in the the one by Howard Sartori, entitled

"solid tubes, a new life for old designs".
If somebody could scan this article, I would be glad to pay them. Thanks!

Pete KE9OA

Does anyone in the group know anything about magnetrons? I planning to do some experiments in transmitting microwaves.

I would like to use standard magnetrons from a microwave oven and
believe I can beam further if operated at the same frequency and
with the outputs in phase. I have no idea on how to do this. Please
advise

Cheers,
Bert

Try looking up "injection locking". Basically, you take a stable signal
and force it into the magnetron via a directional coupler or isolator.
The magnetron synchs with that signal. Multiple magnetrons might synch
to each other depending on the coupling between them. Maintaining proper
phase might still be an issue for the combiner method.

Pete, the last time I did this, I had dual gate MosFET devices.   These days they are harder to find, so I'd probably use two JFETs in cascade to get more or less the same effect.

I vaguelly remember the article recommends dual gate MosFETs but I will admit, it's been a long time since I read it.

I will give it a whirl. I do have some of the dual gate devices on hand. I have to do a board layout for each of the modules, that will have a pin field that has the same pattern as the tube base. Out of all the receivers I have / have had, I think the
R-388 is still my favorite.

I wouldn't mind seeing that article too; in the '80s I built some common type replacements using jfets and bipolars and installed them in an HP scope which was the fastest I had at that time. I still have a real Fetron in my desk drawer.

Regards,

Michael

I think that we all may want to learn the knack: in a near future this
will probably be the only way to refurbish tube equipment... :)

Regards,

You will probably have to add "magnetron " to your search terms.

One microwave oven magnetron will get you pretty close to the legal
limit.  They can be injection locked together, but that usually requires
a circulator that can handle the necessary power (big $).  You also need
some way of adjusting the phase between the magnetrons so that the power
will add.  The adjustment can be tricky as they will tend to interact
even with the circulators.

Dual Gate MosFets are convenient for a tube replacement....

As I recall, I rectified the old filament voltage, regulated it, and made that the new "plate" voltage. Other than that, JFETs and, when necessary, Dual Gate MosFETs did most of the work.

Well, had to mess with the "grid" bias resistors too.

OK, so I used an audio Amp IC for the last part of the audio chain. Still, all in all, the conversions I did were surprisingly easy.

Jim

Circulators are pretty pricy. You will need at least one to keep the high power energy from each magnetron from getting back into the injection source. I read somewhere that about 2% of the magnetron power is required to injection lock. As far as phase, you will need a mechanical or electrical means to adjust the phase of the legs of the injection signals as well as a means to adjust the phase of the magnetrons when combining them. Typically a peice of coax or waveguide of some fraction of a wavelength as require IE; 1/4 wave = 90 degrees. Coax has a velocity factor which makes it behave electrically longer than it is physically.

I am guessing, but perhaps with proper coupling technique, you might get the magnetrons to lock to each other coherently.

Hi,

Is there any kind of program that makes the calculations a bit easier? If I
knew how to do the calculations, I could throw the formula into a
spreadsheet. What I need to do is calculate the inductance with the
parameters of cross sectional area, length, position on the ferrite rod,

number of turns, and permeability of the ferrite material itself.
I would like to throw these parameters into the spreadsheet/program, and let
the software calculate the inductance for me.

Pete

Hi Joe,

Thank you the info. Is it required to cross couple them, or can I use
one magnetron as a "master" that injects into 3 to 5 other "slave"
magnetrons? I will post the results of my effort. Again thanks.

Cheers,
Bert

I see huge lots of mil-surplus 6AU6's, 6CL6's, 6BA6's, 6AK5's etc.
moving through the surplus channels all the time, still.

Someday we'll run out but I suspect that transistors will be obsolete
before we use all those tubes up!

Tim.

GM Pete. Sorry I had to be short on the telephone call, I had a doctors appointment and was running late already. WRT your "antenna problem or opportunity". I made an antenna for WWVB, and also use it for NAA at 24 KHz by adding an additional cap across it for resonance down there. It's better heads and shoulders than any ferrite antenna I ever made. 24 inch bicycle wheel, spokes removed and a space made in the wheel continuity by sawing it apart and adding a small block of wood. This also serves to hold an old ARCO tuning cap of high value, and an instrumentation amplifier made from three LM833 op amps.

A layer of shipping plastic foam between the rim and 120 turns of HPT wire (#26 is a good number), then wrap it all up with a bit of squeezed on aluminum wrap. (Also not continuous, and grounded at the spacer.)

With the inst, amp set for 60 dB of gain, I receive WWVB at about -40 dBm into the 50 Ohm input to a HP selective Voltmeter. Best ever ferrite was around 30 dB worse than this. I use it almost continuously for NAA monitoring of SIDs, and they never go out of detection even in the basement workshop.

Regards and happy New Year.

Please consider photographing this device from a number of angles,
annotating the images with construction data, and making the results
available. I am very interested.

I tried emailing to mario, i3hev, but it bounced (user unknown) using the
'From' and 'Return-path' addresses from his email to me. Anyway, thanks
mario for the scans.

Michael

Hello,

I bought the EB104 kit from CCI. The documentation is a little bit poor
(black and white, poor copy). Has anyone dedailed photos of the assembled
board?

And:
Has anybody some informations of an appicable low-pass filter or an diplexer
(all bands inc. warc)?

best regards

Holger / DL9HDA

you're welcome :)

I'm a bit worried about the bounces, I only use valid addresses - oh,
well, mysteries of the network... :-o

Ciao!

Some useful info on that board here, along with a populated board image,
albeit rather poor:

http://www.qsl.net/wm5z/HF%20Amplifier.htm

By the way, when visiting metal scrappers, I have often noticed large
stacks of motorola business/gov't radio equipment. I have bought these
for $0.50 USD a pound, on up ...

Great source of high output transistors/parts/heat-sinks/etc. In some
instances, the amp board can be removed from equip. with the
corresponding heat sink and mated up with a proper driver.

Its only going to be as stable as the master. There is also some discussion about the Q of the cavity. If the Q is too high, the ability to "pull" the frequency will be restricted. I am afraid you are playing in the sandbox of experimentation. Best of luck and don't fry yourself!

> Small devices like 0602, 0805 components

Small?  0603 and 0805 devices are HUGE.  I have to
solder 0402 and 0201 parts.  The best way to do this
is to use a needle to apply small dabs of slow setting
epoxy on the PCB (between the pads), and then place
the devices with tweezers.  Once all the devices are
placed, let the epoxy cure for a few hours (you can
speed up the curing by using a warm oven).  Then
apply the solder paste.  A low power microscope
(10x to 30x) is a big help.

Thanks Harold...........I whill give it a whirl. For the past few days, I have been experimenting with the ferrite loopstick. Either winding works ok (LW or MW), but if the LW winding is connected, it appears to cause some self resonance problems with the MW winding in the middle of the band, unless I ground both ends of the LW winding. Right now, I am trying a multi-layer winding for the LW section to see if I can eliminate the interraction. It should work..........my Grundig Satellit 3400 appears to use this principle, unless there is a seperate pickup winding for each band. Oh, about the call..............don't worry about it. I had to go to the doctor myself today. Must keep appointments!

Pete

Oh, I figured as much, but I thought it would be a nice experiment to try
(can you tell that I am doing this out of boredom?).
Right now, I am working on that LW/MW active loopstick antenna.

I see huge lots of mil-surplus 6AU6's, 6CL6's, 6BA6's, 6AK5's etc.
moving through the surplus channels all the time, still.

Someday we'll run out but I suspect that transistors will be obsolete
before we use all those tubes up!

Tim.

That's pretty groovy. If you Google the guy's callsign, the first hit will
be his website: http://paillard.claude.free.fr/
I clicked the "Translate this page" link, and was able to read some of the
plethora of text. It didn't help me with the French subtitles in the video,
though!

A simple "column of mercury" (the metal) can pull the necessary vacuum,
you can also run pumps in series--for this application--most likely
would be cheaper to buy the supply of mercury and set up a column to
pull the vacuum for you.

Regards,
JS

I revised my FT-817ND so that the product detector is now fed off the
IF buffer's 220R emitter resistor (not the 1k collector) via a 0.1u
coupling capacitor. This lowers the source impedance seen by the
product detector and now I see no modulation of a CW IF input signal
by the pd's beat frequency output. I do see a trace of it on the input
from the BFO. Unfortunately, no distortion measurements on the audio
output but I believe, based on what I could simulate with LTspice,
that there is some improvement.

73, Tom VE3MEO

>Does anybody know about vacuum pumps homebrewing??? :-)

A LONG time ago (maybe 40 years?), Scientific American carried an article
(in "The Amateur Scientist" pages) about making a vaccuum pump.  (It may
have been part of or near an article about making your own laser which
was strong enough to bounce signals off the moon!)

If you wish to go the vacuum pump route, an old refrigerator unit can
pull a vacuum.  I would think you would need at least two in series with
a small tank (reservoir) in between the pumps ...

Hello,

Triad Transformer has generously posted their archive of transformer catalogs online spanning 60 years.

I was playing with the print feature, they will print to PDF or a 8.5x11 page OK for me.

http://www.triadtransformers.com/

Note,

if anyone has a Triad catalog or historical Triad publication not seen on the site, it would be highly appreciated, to borrow the item, and scan non-destructively, and return, all at no cost to the contributor.

Please send me an e-mail in this case and I'll connect you with the appropriate Triad person. (avoiding giving his e-mail here!!)

Thanks,

Patrick Jankowiak

The guy is a mad scientist...  The video is a real hoot to watch... It
is interesting all the jigs and tools he has/made... I wonder if he
bought some of it as surplus from a commercial tube factory, maybe
circa 1920's..
I would have liked to have seen a bit more on the details of the
gettering and filament activation...

So, there ya go guys: it is only a small step from that little triode
to making your own 3CX15000A7 in the basement...

Absolutely! That damn video clip is just sheer fun to watch! I'd love
to have a friend who made 'em in their basement!

Regards,
JS

I was thinking, a couple of air conditioning compressors off autos would
make a heavy duty vacuum pump.

Please reference my previous post on this topic; clear your cache
before viewing the video (and be sure to use the url that I posted,
not that crazy Italian url), and then look for a file of the
exact size I stated in the post. Be sure to specify at least
60MB for your cache, or the file won't be there.

Regards,

Michael

This is a different presentation from the Hammond .pdf transformer
catalogue on which you can browse page by page for specifications - or
is it just my finger trouble on the Triad website?! I could not find
the listed pages to get specs or even types. Is this fully
downloadable as a .pdf?

Cheers,
Roger

A friend of mine (W0ILJ) , lost everything he owned , except the clothes on his back and his car , in July 2007 , due to a flood and chemical spill DR # 1711 , in Coffeyville , KS. No insurance , since he was in a 500 year flood plain.

He is wanting to replace a few key items and the top of his list is a set of R-14 phones.

Please state condition , price and method of payment .

THANKS ,
73 ,
Charlie (W5COV)

When you say R-14 phones, do you mean an HS-23 or HS-33 headset? The R-14's (and ANB's)are just the elements for these typical headsets. The R-14 was also used in cloth flight caps, etc. I may be able to assist.

Or, go to www.surplusshed.com and do a search on "CD". They have
copies of Scientific American's "The Amateur Scientist on CD-ROM"
collection in the Miscellaneous category (item M2071).

"From the archives of Scientific American Magazine, more than 72 years
of experiments and projects from all The Amateur Astronomer, The
Amateur Telescope Maker, and The Amateur Scientist columns from the
beginning in 1928 thru 2001. Every article is complete with all
photos, sketches, etc. More than 1,000 projects in every major field
of science.

"This comprehensive package also includes over 2,000 pages of helpful
Technical Notes that never appeared in the magazine covering topics
from choosing binoculars for astronomy to monitoring earthquakes, as
well as the full text of Procedures in Experimental Physics by John
Strong, a classic and much sought after reference on instrument making."

List price $40, being closed out for $24. I bought one a few years
ago shortly after it came it... it's an impressive collection of
experiments and ideas. Some of them are >>censored<< dangerous,
others as safe as milk.

SA's decision to shut down the Amateur Scientist column was a
disappointing one, I think.

If you drive along any levee road in my area, you can remove any number of units from dumped refrigs' you like, just carry a crescent wrench or two in your back pocket.

Best thing? Cost $0.00.

Immediate satisfaction too ...

Regards,
JS

$ locate Cache | grep mozilla

Mind the CaPiTAlIZatIoN there.

Also, insure you have your browser set to actually _use_ cache and
that you have your cache size set Mucho Grande!  The video is 57+ MB.

$ ls -ol *.flv
-rw-rw-r--  1 jonesy 57195626 Jan  3 20:18 HomeMadeVacuumTubes.flv

(You'll want to rename it to something human-understandable getting it
out of cache.)

Jonesy

That's pretty groovy! If you Google the callsign F2FO and then click the "Translate this page" link, you'll have a plethora of text available to read.

Kudos for finding that! I would like to point out that "printing" to PDF
works only if one has a driver for that. I use PDF995 (www.pdf995.com)
which is "sponsor-ware" unless you pay a modest fee. There are others as
well (CutePDF, etc).

Does anyone else make thumb-operated scissors? The straight handle makes
them much easier to control than the normal type.

OpenOffice.org

Open Office has supported exporting to .pdf for years and is free open-source software.

At one time I was thinking of finding a vacuum pump and bell jar to make
a chamber for the vacuum depositing of aluminum on glass for making
telescope mirrors. You need a two stage pump because a GOOD vacuum is
required to make a hard coating on the glass. Such chambers usually
first clean the glass with an ion bombardment using an electron gun
assembly or high voltage discharge.

   There are several freeware programs which create PDFs.

The one I use is called PDF Creator and installs as a
printer. Anything you can print can be made into a PDF. Its
a small program and seems to work very well.

www.pdfforge.org/products/pdfcreator

Get the Unplug add-on, then you can snag all sorts of media files.

I finally got around to watching it last night. Quite impressive. After all, DeForest et.al. developed these methods when such techniques were unknown and more primitive. What he shows is that things can be done on a small scale and don't require large factories or armies of workers. Also, techniques like those he shows need to be preserved from being lost to industrial archives.

Beyond the electrical knowledge to make a tube that works, his ability to work with glass was most impressive to me.

I think 50%+ of my earnings go to gov't. I don't think "government
would be BUYING me anything"--we would be purchasing it for ourselves.

Gasoline tax, property tax, transportation tax, booze tax, tobacco tax, federal excise--phone tax, cell phone tax, etc., etc.

Reader Digest used to do an article once a year which showed how long a person must work just to pay his her taxes--last I seen (years ago) it was past April headed for June; anyone read that article lately?

The government is "of the people, by the people and for the people", if you find anything different--there are already dark forces in the government which need removed ... while communism is certainly something we need fear--we should first correct the current clear and present danger ...

Regards,
JS

Just where would I type these things:

```
$ locate Cache | grep mozilla
```

and

```
$ ls -ol *.flv
>-rw-rw-r--  1 jonesy 57195626 Jan  3 20:18 HomeMadeVacuumTubes.flv
```

Do you type it in some kind of SEARCH program or just where please?

I now have the file in the cache, but can't find the cache. I don't think it's in the Mozilla directory, probably under Documents.
I cleared the cache after setting it to 100 Mb, then downloaded the file. Still looking, will try a search on *.FLV and see if it appears.

Where Can I get the UNPLUG add on?  Is it add on for Firefox
or for the Flash Player plugin?  I finally found the file, but all
```

```
attempts to "Unlock" the file shuts the SWF player down, even using
special unlocking software.

Anyway, can you spell out exactly how I get this add on and install it
in Firefox?

The file is stored in Windows in the following file/directory:

C;\Documents and Settings\Joe User\Local Settings\Temp\fla_B.tmp
where the _ is A,B,C,D,C.  depending on how many times you download
the thing.  Any attempts to copy are fruitless, any attempts to unlock
the file are fruitless, as the SWF pugin player just shuts down
immediately and everything disappears.  Perhaps there is some software
that can copy the file even though it is locked?  I have UNLOCKER
installed on my machine and as soon as I tell it to unlock the file,
it disappears as does the SWF player (flvplayer.swf comes up in
Mozilla when you click on the link).

In meantime I'll try to find this UNPLUG plugin at Mozilla.

<snip>

I use NS7.2 (Mozilla Gecko engine); I don't know the filesystem layout
of Mozilla-branded browsers so anyone with details, please chime in.
In Netscape, you can specify cache locations which can permit working
with file and directory permissions independently of volatile temp.
directories such as you have mentioned above. I have not had any
file locking problems with cache files in Netscape when copying
them from a command prompt (I don't work in a GUI). One caveat which
I mentioned before is to allocate sufficient cache size to permit
storing the full flv file and to clear the directory prior to viewing
the video in order to ensure that the file is stored and persists in
the cache.

If your Windows environment somehow prevents access to the file when it is in a cache on a local drive, try assigning your cache to a network share which may permit grabbing it from a different machine (for me, I use Netware shares for my browser's cache and it is easy to grab them from a mounted nfs filesystem on a unix box or even to undelete them with the Netware 'salvage' utility if they should vanish).

Perhaps you can use an ntfs undelete utility to recover the file from a local drive if the above methods don't work for you.

Regards,

Michael

Dear Nate;

Thanks, found the UNPLUG at Mozilla site, installed it, and it worked just fine, now have the file on hard drive to share with friends. Outstanding film, and thanks to you fellows for helping me find a way to get it on the computer.

Jim

The choice of an IF frequency makes an interesting bit of radio history.
The first BC superhets used IF's from 90khz to several hundred khz.
Eventually 135khz, 150khz, and 175khz became "standard" (I remember
seeing replacement IF cans with these frequency numbers in J W Miller's
catalog.) These sets had an RF stage so were not bothered much by
images with such a low IF. Later during the depression when radio
manufacturers had to cut costs the RF stage went away (along with the
power transformers) and the IF frequency was raised to 455 (+/- a few).

Car radios needed more sensitivity and selectivity to handle fringe area reception so they retained RF stages and used a 262khz IF.

All it takes is just one poster wearing a tinfoil hat for something
like this to get started.

Whatever happened to surplus savvy? In our area, not major metropolitan
by any means, there are DoD sales, surplus outlets, many hamfests, etc.
with no shortage of heavy iron.

>>>
>>>
>>> Getting weirdo stuff rebuilt isn't all that difficult, if it's large

I also recommend rewinding houses; even here there was (haven't checked
recently) a good transformer rewinding house that did small stuff
for very little money. Feel free to do it yourself as well; everyone
should try at least once.

Regards

Michael

Hopefully someone will be able to buy them out, and continue the service. If it's fun and/or makes money it'll happen, unless Mr. Dahl is too eccentric to let go of his business.

Wow! This is indeed sad news for hams & others but, mostly for Mr. Dahl and his family.

Well, I called their non-800 number this morning (my nickle) and got a generic recorded message on an answering machine (but it invited me to call PD at home or his cell phone and gave the numbers, but I am not ready to make a casual call under the circumstances).

I'm thinking about going back to the website and get some email addresses and try them next.

Greetings!!!

I plan on building a 500 KC transmitter, 200 watts output. I have never worked with power FETS before.

What is the selection method used in determining which FET to use??
I see some great FETS
cheap.

Example: IRFP254

250 volt Vdss

RDS on .14

Amps 32 amps

Rise time : 51 NS

Cost; 2.50 each

The data sheet does not spec any freq's (Ft) like bipolar
transistors?? How do I select the right FET??? freq range

Thanks!!!

The 500 KC transmitter will run at 28 VDC

Greetings!!!

Can a Toriod   transformer be Glued to a heat sink???   The Toroid will be JB welded to the heat sink.

The toroid will be wound with a 30 degree gap between the start of the winding to the end of the windings   the toroid will (winding gap) be glued at that that point vertical position   the windings will be about 1/4 inch above the heat sink.

Comments???

Thanks!!!

I can hardly imagine just about any device like this having an Ft so low that it wouldn't work at 500 KHz. What ham band do we have at 500 KHz?

Ummm, not a good idea from my experience... I would be happier to see
a non metallic spacer between the toroid and the heat sink...

There are Part 5 licenses recently issued for a 2 year duration 505 to
515 KC to WD2XSH for 20 watts ERP...
I doubt that even 200 watts will get you there with any normal ham
antenna...

denny / k8do

RV7 - even super SLOWER build....

Is the toroid getting so hot that RTV will not work? If so, then you
have other problems. Toroids are not supposed to get hot! Most toroids
are attached to circuit boards with RTV. I have never seen one needing
a heat sink.

JB Weld is wonderful stuff, but will crack if subjected to stress or
vibration. If you still want to go ahead with this, you need to make a
rough surface on the toroid and the heat sink to give the JB Weld a
place to attach to.

Paul, KD7HB

It is a temporary authorization to specific hams or is it for something completely different and it just happens to be a ham who asked the original question??

Are you trying to heat sink the transformer? That's a mistake. The glue will be an insulator, not a conductor!

If you're just physically mounting it, a good stiff bolt running through the center, with some rubber isolation, is how I always see it done.

Tim.

==================
A toroid carrying a RF signal should never get hot ......if it does there is
a serious design problem.

Those FETs have usually quite large gate capacitances (nanofarads), so in order to rapidly change the gate voltage (and hence the drain-source current) rapidly, the driver stage may have to supply a significant current to charge and discharge this gate capacitance. In many cases, the driver current limit may limit the operating speed of the circuit.

I did not see the OP as being a heat issue, just a mechanical mounting issue... THough toroids are more self shielding than than non toroids, they are not perfect... Based on my experience with toroids in VFO's

being very close to a metal object does affect the inductance, I would
prefer to see him glue an insulator pad to the heat sink as a spacer
and then glue the toroid to that... IF he was in fact trying to
heatsink the toroid, he has major design problems he needs to solve..

It's temporary (for now) and there are 23 licensees authorized... DO a search on the 500 kc and the call and you should come up with it...

Does anyone have/know the wiring configuration of the connections on
Yaseu Portable battery packs?

Specifically I would like to connect an external power source to one
of my portables (FT-51r) and would like to look at a schematic before
making connections incorrectly and cooking my radio.

I also have the following Yaesu portable models FT-411, FT-530, and
suspect the batteries have similar wiring configurations.

I have checked the Internet, Yaesu, and after market battery outfits
with little usable response.

Thank you in advance for any assistance you may be able to provide.

****

I am also looking for the following accessories to allow connecting
external power to my Yaesu Ft 51r Ham radio.

EDC-12 Allows connecting to a cigarette plug in a car or power supply.

FBA-14 Allows operating the radio on four AA batteries.

I would also like to buy a dead battery for the same radio to tear
apart and build my own adapter.

Depending on what you have I might also be interested in other
accessories for my radio.

Thank you.

I'm not too sure, but I think that today's car radios DO use 455khz.
I think they stopped using 262khz some years back when Detroit started
having the radios made in China and got rid of the RF stages.

But, back then I think Mitch knew better.  He never did build that
transmitter, too bad it would have been fun.

Actually, most of them use 450KHz nowadays.

The synthesizer ICs are designed for 450KHz, presumably because of
some fact that makes it easier to design for that IF, such as it
allows an existing common crystal or something.

I can't think of any car radio I've opened up that had digital tuning
and not a 450KHz IF.

It's not so absolute in other types of radios, but it is still a common
IF (which can be a real bother if you've got a shortwave receiver
and thus can't improve selectivity with a good and relatively cheap
used 455KHz mechanical filter).

262KHz IFs in car radios did pretty much disappear with the coming of ceramic
filters.  And no car radio is being made without ceramic filters.  Though,
I think I did see one car radio, it must have had analog tuning, that did
have a 262KHz ceramic filter.

  Michael

I certainly would prefer to use RTV since that allows for different temperature expansion between the toroid and the mounting surface.   Toroids are rather brittle and need some amount of flex in the way they are mounted.

MI5. Persecution: Molestation during Travel

MI5s persecution of me varies in intensity. Since 1990 it. has been steady for perhaps 80% of the time; there was a notable quiet period in. 1993, and another quiet period in Jan-Feb 1995, as well as a hiatus in. the first two months of 1999. It puzzles. me that they cease and restart, seemingly without any. logic or reason. But one aspect of MI5s activities against me which is relatively predictable is this weeks. articles topic, which is Molestation during. Travel. Almost every time I cross the Atlantic, go to the Continent or even try to enjoy a holiday. in this country, you can bet that MI5 will be there doing their. utmost to wreck it all.

This aspect of the harassment is. particularly relevant as I will be travelling to Europe again in a. months time, with naturally the Minidisc recorder in tow; so it will be interesting to see if. I can record the abuse which. will almost certainly take place, either on the Tube going to the airport, at the airport, on. the flight, in the terminal building - MI5 have previously instituted instances. of abuse at each of these locations, so well see how much taxpayers money they waste. this time, and whether it will prove. possible to capture their abuse on minidisc.

Read about the MI5 Persecution on. the Web

June 1992 in Polands mountain resort. of Zakopane

The persecution started. in June 1990, and for the first two years I stayed in the UK apart from a couple of brief day trips to Calais. By the. summer of 1992 Id had enough of being cooped up in England with. abusive fellow employees egged on by an abusive secret police service, and. decided to spend 10 days in southern Poland, on what was intended to be a. holiday at the mountain. resort town of Zakopane.

Unfortunately. the psychopaths of the Security Service were not willing to allow. me to enjoy a holiday in peace and quiet. The journey to Zakopane was by coach from the meeting point at Londons Victoria coach. station (National Express) followed by ferry. followed by another coach across Europe. As we. left Victoria a youth and his girlfriend started a loud tirade of abuse directed at "this bloke", where the "bloke" was. never named,. but it was very clear that the "bloke" was myself. The youth said "they" had "found somebody from his school, and. he was always really stressed at school, a real psycho". Again, the. label "they" was not elaborated on, but it was. clear that "they" = the persecutors from MI5. The boy also said, "he was in a bed and breakfast for only one. night and they got him". By a not unexpected. coincidence I had been in a B&B in Oxford a week previously, which had been booked. from work; other things lead me to the. conclusion that the company's offices were bugged for most of. the 2 1/2 years that I was there, so "they" would have known a room in the B&B had been booked. After a few minutes of this I went back. to where they were sitting and asked where they were travelling. The boy. named a village in France, and the girl's giggling suddenly. ceased; presumably it permeated. to her brain cell what the purpose of the boy's abuse was.

It is now very. clear to me that MI5 were trying to have me incarcerated, assaulted or killed on this trip across Europe. The degree. of verbal violence inescapably leads to. this conclusion. When we arrived at our destination, it became clear that. many people, both in our tour group and its guide, and. among the ordinary residents of the town, knew there was a movement under way to "get". me. MI5 employed many people and significant resources for an action which they knew would only take a maximum of. ten days. A commercial operation would never have felt able to waste. such resources on such an unproductive. and temporary action; only a state-sponsored, taxpayer-funded entity. like the Security Service would be able to be so. wasteful.

To give some examples of what happened in those ten days;. I was walking in some woods outside the town, when a Polish. woman, looking at me, said the English "shit" in. a strongly Polish-accented voice. For the first three years 1990-92 MI5 had been trying to force this word on me.. Another example; I. was walking near my "hotel" when a mother said laughing to her child,. "a wiesz ze to prawdziwy wariat" which means "you know hes a real madman". And the. "TV reacting" happened there too; on Polish TV, a bemused looking journalist said to another, "to jest sprawa Anglikow", which. means "its the concern of the. English", in other words, none of our business, despite what the English are trying. to force down our throats.

Just before we left. for home, I went with some others from our group to a nearby. bar. There a man shouted at me the same sexual obscenity which MI5 have constantly thrown at me these last three years. I think MI5 try. to justify their various terms of abuse by repeating them at. me until I say them, either while. conscious or while talking in my sleep; and then they seize on my saying those words to "prove". that the obscenities are "my fault", et cetera. This rather stupid reasoning of. theirs can actually be seen as indicative of the psychopathic condition. attributed to them in a previous article; blaming. the victim for the crime you inflict on him is how psychopaths. think.

Nor. did the persecutors let up during the return trip. Returning on the ferry over. the channel, a rather insalubrious-looking guy talked to his mates about "and you know this bloke,. hes really mad you know, hes really mad". On the National Express return coach. to London, a group of five or six. young people started shouting at me. I slumped in my seat and tried to avoid presenting a target, so they got ever more strident. - "whats the matter. with you, cant you hear us?" One of the other people who had been on the trip to Poland asked them why they were shouting at. me, and they said, "hes been to Cambridge", to which the. co-holidayer asked them, "have you been to Cambridge?" presumably thinking they were. aggrieved fellow students, but they. answered "no". Even after I left the coach at Elephant and Castle abuse continued;. in the tube station, two kids started throwing abuse at me; one of them said to the. other, "and you know he works?" to which the. other answered "yes".

Immediate Aftermath of. November 1992

As you will know. from previous articles, my manager at OCG - ARIS/Oxford, Mr Mitchell, induced a mental breakdown in me in the months. leading up to Nov/92. The diagnosis was regarded by the persecutors as a victory. for them,. because few if any people give credence to allegations of harassment when they are made. by somebody suffering from schizophrenia. There is also a bias against the mentally ill, an. "institutionalised bigotry" in society comparable to. the institutionalised racism against blacks.

However, MI5 did not let up on. persecuting me following Nov/92. In December 1992 I flew by. charter jet to Alicante in Spain for two weeks recuperation.. MI5 planted one of their people on the flight, a youth who tried to. start some noises that "hes a nutter". One of the other passengers replied, "oh hes a nutter is he? oh well!". and the youth shut up and said nothing for the rest of the flight. I think it would be. fair to say that the youth on the flight was embarrassed by what he. had been asked to do in making the flight "uncomfortable". for me; he sounded defensive. rather than aggressive.

My first. trip to Canada in June 1993

Ive already covered. this in a previous article so Ill just give a brief summary here. On 10 June 1993. I flew British Airways from Heathrow to Torontos Pearson Airport. On de-planing from the. aircraft, one of a group of four fellow passengers. looked at me and said, laughing, "if he tries to run. away well find him". It was quite obvious that these four men were the ones. who had been harassing me since 1990.

I did nothing to apprehend them or bring this incident to. the attention of the airport authorities, mostly because this was my very. first visit to Canada, and the last thing I wanted was to get into. a dispute before I had even finished disembarking. In retrospect,. I can see this was a terrible mistake; I should have made. every effort to detain and identify these people.

Subsequently I have made numerous. attempts to obtain the names of these people from. British Airways passenger lists, by talking to BA, through a lawyer in Ontario, through a. solicitor in England, through the UK police, and also through private detectives in the UK. But all my. efforts have come to. nothing. BA have told me they keep passenger lists for a period of seven years, so they will still have. the list for this 1993 flight. I did not see or hear anything during the rest. of my visit to Ontario in 1993 which would have lead me to believe that I was being. watched or followed.

Journey across Canada. in summer 1994

As I think Ive already said in previous articles I. emigrated to Canada in late May 1994. For six weeks between late May 1994 and early July 1994. I travelled across Canada from coast to coast, starting in. Toronto, visiting various cities and ending up in British Columbia.. I saw this both as something of a holiday, and the chance to get. to know a little better my adopted. country.

As you can guess, MI5 followed me everywhere I went during. these six weeks. In Toronto, where I. started this trip in late May, I was spoken about by one. youth to another with the words "hes an idiot", to which the other. replied, laughing sympathetically, "good luck to him".

A couple of. days later I went to Montreal and stayed at the YMCA downtown. As you can guess (this is all. so predictable, isnt it?) MI5 followed me there and bugged my room at the YMCA. Not. only that, but they managed to set-up an instance of "newscaster reaction". from a local television station; while I was watching a Vermont TV news. programme on the set in my room, the. woman reporter said, "well theyre just tired and they want to go home",. which sounds like a pretty unprofessional thing to say until. you realise she was trying to say of me that I was the one that was supposed to be tired, and they (ie MI5) wanted. me to go home to the UK.

On the bus journey. across the North American continent, it was quite clear that MI5 were following me every step on the way. For the first. part of the journey they actually put someone on the bus with. me, a youth who said at me "that guys paranoid" and tried to incite other passengers. to attack me. I stopped for. a couple of days in Winnipeg in central Canada, and on leaving the town heard on. the radio a female presenter ranting about "insanity! insanity!". It is. very tiring travelling such a long distance by bus; I took the journey in two steps, each of about 36 hours; and. it is especially tiring when. you know MI5 are watching you and harassing you every. step of the way.

When I finally got to. Vancouver, MI5 instituted the usual harassment, in very short order. I was surprised how. quickly they were able to induce hatred towards me in elements of the general. populace; the Security Service must have employed a. number of agents and serious resources in a very short period of time; and for no real. gain, because I havent been back to BC for almost. five years, so all their "work" appears to be for nothing. In downtown Vancouver a street person said in. front of me, "theyre all talking about him". For a few days I was staying. at Pauls Guest House (345 W.14th Ave); on. the day I left, the owner Paul shouted at no-one in particular, "hes. going to Victoria" - which was quite accurate, I was. indeed going to the provincial capital Victoria on Vancouver Island. But I had not told anyone at. the guest house where I was going; I had only. mentioned to my parents back in England on the phone that I was going away from Vancouver for a few days.. Which leads me to suppose that MI5s bugging of the phone in my parents. house yielded the "intelligence" that I intended to visit Victoria, and they. had passed the information on. to Paul.

When I got to Victoria it was again obvious that the. persecutors were "doing their stuff" there as well. On. the street I was identified as being English,. although I had not said anything so my accent hadnt given me away; and returning by ferry to the mainland, I was abused. by a Canadian woman who said,. "hes a nutter! you can run but you cant hide". During my years in Canada I. have never heard the word "nutter" on any other occasion;. I do not think it is part of Canadians vocabulary; so the Canadian woman. on the ferry, who was obviously talking about me, must have been supplied with. this word by the English persecutors. And once I got back to Vancouver, staying at the Austin Hotel on Granville St, I. listened to a conversation in the apartment block directly opposite,. and a man saying, "hes paranoid, so thats as bad as. it can be, so why are they doing this. to him?".

Holiday in the. States, August 1995

By 1995 I was living. in Canada, and in August I went down the eastern seaboard to Florida and as far as Key West by car. As you can. guess (this is all so boring and predictable, isnt it?) MI5 followed me every step. of the way. I can see in retrospect that this must. have been quite easy for them. as they had my car bugged, both on the inside to listen to anything that was said and what radio station I was listening to, as well as. what must have been a tracker device installed to track it. across long distances.

The first city I visited was Philadelphia. In the old Congress Hall. where the first US Congress assembled, the woman guide. started referring to my situation, saying that "all these people in Europe were watching. it", and they. were "a little paranoid" at this 18th-century experiment in democracy.. Also I had recently written a newsgroup post where Id described a (female) poster as "wet-nosed" (implying "canine"), and a young girl. in Philadelphia remarked, "so he. thinks were dogs?" There were two or three more incidents during this holiday in the. eastern States, including a radio station down near. Miami, showing "they" had tracked me all the way there, and were bugging the inside of my car;. but I didnt record the details and Ive forgotten. some of it now. Also down in Miami Beach a French tourist in. a lift expressed support for me with the words, "cest incroyable" ie. its incredible,. meaning that MI5s well-known actions against. me were beyond belief.

To go. back a bit, in about May/June 1995 Id visited New York, again by car, and was insulted several times by. people using the same words that had been used against me in England. In. Central Park, and elderly Englishman (not a real gentleman. - but then the Engish view of themselves as "gentlemen" etc is quite laughable). looked at me and said "idiot". And while I was. eating in a streetside restaurant a New York youth started laughing and said something like, "I cant believe it, hes actually here". - I think that was because I had had an expressed. wish to visit New York for some years. before this, although after this visit I wont be going there again for a. very long time.

Visit to Poland. December 1995/January 1996

In December 1995 I flew. (BA again, unfortunately - every time Ive flown BA one. of these incidents has happened, presumably MI5 is happier setting up harassment on British-domiciled. carrier) from Montreal to Berlin and travelled on to Poland to visit family. MI5 naturally harassed me. in Poland during my brief stay.. They followed me around and got Polish people to. take part in the harassment. In one case two Polish youths talked in front of me saying in English (with marked Polish accents),. "fucked up men, fuck you". There were also other incidents. which I dont remember too clearly since it was some. time ago.

The return flight connected through Heathrow, and in the transit. lounge MI5 again set-up harassment against me. In. Poland they were talking their abuse in English, and. in London they set Polish people after me to speak in Polish; they heard me on. the phone to my father, and said "a wiesz ze to Polski. wariat", in an almost sympathetic, inclusive fashion (translation. "you know hes a Polish nutter").. Once on the flight to Montreal I. was again set upon by two English youths, one of whom spoke and the other listened. The aggressive "fat bastard" youth said, "if he. wants to be a wanker" (its my fault theyre harassing. me, you see), self-justification that "hes a nutter" (so we. have to keep on abusing him, because hes ill), as. well as talking about the town in Poland where I had been staying.. He also said, "he doesnt know who we are", but as already remarked in a previous article,. that was at best a half-denial of my guess expressed in internet. newsgroups that the people after me were MI5 - if anything its a half-confirmation rather. than a half-denial.

These incidents are still going on. You can hear. digitised audio files of abuse on a BA flight to Berlin in 1998. on the Web at address

On this flight they were. again attacking my mental health; "paranoid, hes paranoid" and. "nutter" are discernable. The last "during travel" contact was at Ottawa. Airport on 21 July 1998, when "Alan Holdsworth" the psychopath MI5 agent, dressed as a vagrant, was pacing aggressively in. the departure area. In three weeks I will. again be travelling to Europe; we will see what fresh acts of molestation MI5 perpetrate. during this trip.

MI5 are. Afraid to Admit They're Behind the Persecution

MI5 have issued a formal denial of. any involvement in my life to the Security Service Tribunal, as you might. expect them to; but, more importantly, the persecutors have. never denied that theyre from the Security Service, despite several years of. accusations from my corner on usenet and in. faxed articles. I am not surprised that the Security Service Tribunal found "no determination in your favour".. I am however a little surprised that the persecutors have refused to confirm my. identification of them; by doing so, they. implicitly admit that my guess was right.

"No determination. in your favour" says the Security Service Tribunal

In 1997, I made a complaint to the. Security Service Tribunal, giving only the. bare outlines of my case. I do not think it would have made very much difference if Id. made a much more detailed complaint, since the Tribunal has no ability to perform investigatory functions.. It can only ask MI5 if they. have an interest in a subject, to which MI5 are of course free to be "economical with the truth". A couple of months after my. complaint the Tribunal replied. that;

The Security Service Tribunal have now. investigated your complaint and have. asked me to inform you that no determination in your favour has been made on. your complaint.

Needless to say this reply. didnt surprise me in the slightest. It is a well established fact that the. secret service are a den of liars and the Tribunal a toothless watchdog,. so to see them conforming to these stereotypes. might be disappointing but unsurprising.

It is noteworthy that the Tribunal never gives. the plaintiff information on whether the "no determination in your. favour" is because MI5 claims to have no interest in him, or whether they claim their. interest is "justified". In the 1997 report of the Security Service. Commissioner he writes that "The ambiguity of the. terms in which the notification of the Tribunals decision is expressed is intentional", since. a less ambiguous answer would. indicate to the plaintiff whether he were indeed under MI5 surveillance.. But I note that the ambiguity also allows MI5 to get away with lying to the question of their interest. in me; they can claim to the Tribunal that they have no interest, but at. a future date, when it becomes clear that they did. indeed place me under surveillance and harassment, they can claim their interest was "justified" - and the. Tribunal will presumably not. admit that in their previous reply MI5 claimed to have no interest.

"He doesnt know. who we are"

In early January 1996 I flew on a British Airways jet from London. to Montreal; also present on the plane, about three or. four rows behind me, were two young men, one of them fat and voluble, the other silent. It. was quite clear that these two. had been planted on the aircraft to "wind me up". The fat youth described the town in Poland where I had. spent Christmas, and made some. unpleasant personal slurs against me. Most interestingly, he said the words, "he. doesnt know who we are".

Now I find this particular form of words very. interesting, because while it is not a clear admission, it is. only a half-hearted attempt at denial of my guess. that "they" = "MI5". Had my guess been wrong, the fat youth would surely have said so more clearly. What he was trying to do was. to half-deny something he. knew to be true, and he was limited to making statements which he knew to be not false; so he made a lukewarm. denial which on the. face of it means nothing, but in fact acts as a confirmation of my guess of. who "they" are.

On one of the other occasions when. I saw the persecutors in person, on the BA flight to Toronto in June. 1993, one of the group of four men said, "if he tries to run away. well find him". But the other three stayed totally quiet and avoided eye contact. They. did so to avoid being apprehended and identified. - since if they were identified, their employers would have been revealed, and it would become known that. it was the secret services who. were behind the persecution.

Why are MI5 So Afraid to. admit their involvement?

If you think about it, what. has been going on in Britain for the last nine years is. simply beyond belief. The British declare themselves to be "decent" by. definition, so when they engage in indecent activities such as the persecution. of a mentally ill person, their decency "because were British" is still in the forefront of. their minds, and a process of mental doublethink kicks in, where. their antisocial and indecent activities are blamed on the. victim "because its his fault were persecuting him", and their self-regard and self-image of decency. remains untarnished. As remarked in another article some time ago, this process is basically. the same as a large number of Germans employed fifty years ago against. Slavic "untermenschen". and the Jewish "threat" - the Germans declared, "Germans are known to be decent and the minorities are. at fault for what we do to them" - so they. were able to retain the view of themselves as being "decent".

Now suppose. this entire episode had happened in some other country. The British. have a poor view of the French, so lets say it had all happened in France. Suppose. there was a Frenchman, of non-French extraction, who was targeted by the French internal. security apparatus, for the dubious amusement of French television. newscasters, and tortured for 9 years with various sexual and. other verbal abuse and taunts of "suicide". Suppose this all came out into the open. Naturally, the French. authorities would try hard to place the blame on. their victim - and in their own country, through the same state-controlled media which the authorities employ. as instruments of torture, their view might prevail - but. what on earth would people overseas. make of their actions? Where would their "decency" be then?

This is why MI5 are so afraid to admit theyre behind. the persecution. Because if they did admit responsibility, then they would. be admitting that there was an action against me - and if. the truth came out, then the walls would come tumbling. down. And if the persecutors were to admit. they were from MI5, then you can be sure I would report the fact; and the persecutors support would fall away,. among the mass media as well. as among the general public. When I started identifying MI5 as the persecutors in 1995 and 1996 there was a. sharp reduction in media harassment, since people read my internet. newsgroup posts and knew I was telling the. truth. The persecutors cannot deny my claim that theyre MI5, because then I. would report their denial and they would be seen as liars - but they cannot admit. it either, as that would puncture their campaign against me. So they are forced to. maintain a ridiculous silence on the issue of their identity, in the. face of vociferous accusations on internet newsgroups. and faxed articles.

Have MI5 lied to the Home. Secretary?

In. order for the Security Services to bug my home, they would either have needed a warrant from the Home Secretary, or they might. have instituted the bugging without a warrant.. Personally I think it is more likely that they didnt apply for a warrant - I cannot see any Home Secretary. giving MI5 authority to bug a residence to. allow television newscasters to satisfy their rather voyeuristic needs vis-a-vis one of. their audience. But it is. possible that the Security Service presented a warrant in some. form before a home secretary at some point in the last nine years, for telephone tapping or surveillance of my. residence, or interception of postal. service.

So the possibility presents itself that a. Home Secretary might have signed a warrant presented to. him based on MI5 lies. Just as MI5 lie to the Security Service Tribunal, so they might have lied. to a Home Secretray himself. MI5 and MI6 are naturally secretive services. former home secretary Roy Jenkins said, they. have a "secretive atmosphere ... secretive. vis-a-vis the government as well as [enemies]". Jenkins also said he "did not form a very high regard for how. they discharged their. duties".

It. was only a few years ago that MI5 was brought into any sot the extraordinary thing is. that British media organisations like the state- and taxpayer-funded BBC take such. an active part in the MI5-inspired campaign of harassment. We have after all heard. of MI5 trying to bribe broadcast journalists; but surely there. must be a substantial number who are not. bought or blackmailed by the Security Services, and who take part in the "abuse by newscasters" of their. own volition? The BBC is supposed to be independent of the government of the day as well as. the Establishment in general. While perhaps it is childish to think that. the BBC is anything. other than effectively state-controlled, the degree of collusion. between the BBC and the British Secret Police MI5 is something you would not find. in many countries. Individual tele-journalists in other countries. would have enough self-esteem not to allow themselves to be controlled by their secret police. - seemingly, BBC broadcasters like Martyn Lewis and Nicholas Witchell have such a low. opinion of their employing organisation that they see no wrong in dragging the. BBCs no-longer-good name through yet more mud, at the mere. request (whether supported by financial or other inducements) of the. British secret Police, MI5.

And when challenged, these. broadcasters LIE about their involvement, with just as little shame as MI5 themselves. The BBCs Information. dept have said. that;

"I can assure you that the. BBC would never engage in any form of surveillance. activity such as you describe"

which is an out-and-out. lie. Buerk and Lewis have themselves lied to their colleagues. in the BBCs Information department over the "newscaster watching", but unsurprisingly they refuse to. put these denials in writing. Doubtless if the "newscaster. watching" ever comes to light, Buerk and Lewis. will then continue to lie by lying about these denials. So much for the "impartial" BBC, a nest of liars bought and paid. for by the Security. Services!

It is obvious. that the persecution is at the instigation of MI5 themselves - they have read my post, and only they have the surveillance. technology and media/political access. Yet they. have lied outright to the Security Service Tribunal.. Similarly, BBC newscasters Michael Buerk and Martyn Lewis have lied. to members of their own organisation. The continuing harassment indicates they are. all petrified of this business coming out into. the open. I will continue to do everything possible to ensure that their. wrongdoing is exposed.

MI5 Persecution Update: Friday 11 June,. 1999

Harassment. in a pub in Clapham, Tuesday lunchtime

Once a month, or once every other month, I meet a Polish. friends of mine who lives in Clapham North, and sometimes we go. to a particular pub near where he lives. The last time was some two months ago; I did not have. my minidisc-walkman with me,. and consequently was seriously harassed by people MI5 had instructed to harass. me, in the pub.

This Tuesday, 8 June 1999, we again went to. the same pub for a pre-meal drink. This time I did. have my minidisc-walkman with me. As you can guess, we were followed. into the pub by a couple of young people (Im getting older and older - isnt it funny how the MI5. agents all look young these days?). They started talking about my situation, in particular. some travel I had booked the previous day. Unfortunately, they were talking. fairly quietly, and my. minidisc didnt pick up their speech.

MI5s. schizophrenic reasoning is that simultaneously I am very important and worthy of their acts. of persecution, and I am also totally unimportant and their abuse of me "doesnt matter". Perhaps they. should test their agents and managers for obsessive personalities or. psychotic features in the same way as. employees are drug-tested. MI5 might lose their "worst cases" employees if. some psychological testing were applied to their recruitment. procedure.

Toothless Watchdogs. What. a Surprise.

Recently I have been. engaging in communications with two watchdogs, the Security Service Tribunal which deals with complaints against the. security service (and always clears MI5 of any wrongdoing), and the. Data Protection Registrar, which is. mandated to investigate misuse of personal data held on. computer.

In a letter to. Nick Brooks, Security Service Tribunal secretary, dated 20 April, I asked him if the Tribunal, as an allegedly. independent body, had the means to investigate complaints against. MI5 other than asking MI5 to themselves investigate complaints. To. my disappointment, his reply two weeks. later answered the question only indirectly, in the negative. Whatever. the reader might think of the merits of the case I have been putting before you in faxed articles. this last year and half, you will surely recognise that it is a significant. anomaly for the Tribunal to have no independent means of. investigating complaints, particularly given the view expressed even by previous home secretaries that the. security services. are untrustworthy.

MI5 Persecution: No Justice. for the Victims of MI5

In a previous article I detailed the similarities between the current. MI5 Persecution in. England, and other historical instances of similar persecution, notably that. by the Nazi Germans in the thirties and forties. The Germans persecuted. first the mentally ill, the epileptics and those suffering from. schizophrenia, then moved on to racial groups; in todays Britain the persecution is again directed at those with. mental illness, which the British in. their cowardice find easier than taking on racial groups as the Germans did. But just as in Thirties Germany. there was no recourse against a. malign and omnipotent state, so the MI5 Secret Police in the modern British Fascist State. allow no justice for their victims.

No Recourse Against the Security Services Illegal. Harassment

It has become apparent to me over the last nine years just how loaded. the dice. are in todays Britain, a fundamentally fascist country which masquerades as a democracy. Britain is a. democracy in name only; the Establishment, the defence and MI5. secret police are always there, regardless of which party has been voted into power most recently -. and from. "New Labours" conduct in office one finds it difficult to tell them apart from Old Tories, in their crackdowns on the sick. and vulnerable in society.

In thirties Germany the victims of the. Nazi regime had no legal recourse against their. State oppressors; and in todays Fascist British state, the victims of the Establishment and its MI5 Secret Police similarly have. no recourse against the illegal state-funded and. organised oppression. There is. supposed to be a mechanism for dealing with MI5 crimes, in the shape of the Security Service Tribunal and Commissioner; yet these have never. found favour of a. plaintiff. One might as well ask the Nazi SS to investigate crimes against epileptics. or Jews as ask the Security Service Tribunal to investigate MI5 crimes. against British citizens; it is quite obvious what the answer is going. to be, regardless of what you say to them, and what evidence you provide. The Tribunal. and Commissioner are a mere formality, a whitewashing body to give. the Secret Services a veneer beneath which they hide their. shabby criminality.

"Institutional Racism". and Bigotry in the Metropolitan Police

The recent inquiry. into the racist murder of Stephen Lawrence found clear evidence of systematic and deliberate racism in the. Metropolitan Police, which cannot have. surprised anyone. Commissioner Sir Paul Condon accepted a somewhat lukewarm definition of institutional racism as. being "unconscious". In truth, and. this truth must surely be obvious to anyone who has any familiarity or encountered the great British police, the. Met has not just "unconscious" racism, but very clearly. "conscious" and deliberate racism, of the kind that would have done Thirties. Germans proud. And it is a bastion of such open racism - when many. other parts of society are. learning to live in a multicultural environment, the Met is still living in the past. in its attitude to the minorities.

But in addition to. the systematic racism confirmed by the Lawrence inquiry, there is also something much more relevant to. this case, which is systematic police bigotry against the physically. and mentally disabled, which. I personally have experienced in my dealings with the police over the years. You cannot expect equal treatment if. you are mentally disabled.. I tried to make a complaint to the police in 1995 about the harassment I had been subjected to. for several years. As soon as they found. out I had mental illness, they refused to even talk to me. I tried again in March 1999; the police made various threats to me, while. ranting about "your paranoid rubbish" in reference to the complaints. expressed to them.

The police refusal to. do the job they are employed and paid to do is extremely serious,. particularly as this case is highly important, indeed key to the whole issue of British self-perception at. the end of the 20th century. and the beginning of the 21st century. Britain has lost much in the last fifty years - it has lost. an empire, it has lost its self-respect and its identity as a people.. If the MI5 persecution finally makes it into the light and the Security Services are seen for the rather cheap. bullies their behaviour indicates, it will have a massive and harmful. effect on British self-perception in the. new century.

Security Service Tribunal. - Blatant Whitewashing

A few. weeks ago I spoke on the phone to Nick Brooks, the Secretary of the Security Service. Tribunal, which is supposed to deal with cases of MI5 transgression. I asked him if the Tribunal had. ever found in favour of a plaintiff and against the Security Service. He answered that as far. as he knew,. it had not.

I. also asked Mr Brooks if the Tribunal had any means of investigating allegations of criminal activity by MI5, other than asking MI5. themselves if they had engaged. in such activity. His rather circuitous written reply states that the 1989 Security Service Act provides. that "it shall be the duty of every member. of the Service to disclose or give to the Tribunal such documents or information as. they may require for the purpose of enabling them to carry out their functions under this Act". Which. is a very round-about way of saying - "No" - the Tribunal. has no way of investigating MI5 crimes - None. At All.

Setting up the S.S. Tribunal, and. creating a Security Service Commissioner, was really an act of falsehood by the. government. It is generally recognised that MI5 are. out of reach of the normal criminal justice system - the police, as we have seen,. have no intesot answer to the government; in a previous article. I quoted Roy Jenkins speaking of "a secretive atmosphere.... secretive vis-a-vis the government as. well as [enemies]", and a "lack. of frankness" from MI5.

If the government wanted to, it could. reform the secret services and ensure they acted in conformance with the laws which have. been enacted for them in the last ten years. But apparently the present government. does not see any need to. ensure security service compliance with the law. As noted above, the regulatory. machinery for MI5 is deliberately weak; the Tribunal has no independent means of investigation,. and it is simply a waste of time complaining to the Tribunal. or Commissioner.

Every so often, fresh revelations come to light of secret. service transgressions.. We have heard from Shayler that MI5 bugged Jack Straw and Peter Mandelson; we have heard from Peter Wright that MI5. plotted to see Wilson ejected from office; yet so closed. is the system of government that the law is never. enforced against MI5 when they "bug and burgle" everyone from. politicians to ordinary citizens.

No Justice from the Legal System,. either

Britain has a. civil and criminal justice system which effectively limits many complaints from being heard.. For a civil complaint to be brought before a court, you need a solicitor willing to act. on your behalf. Supposedly it is. possible to represent yourself as a Litigant-in-Pthe basis of. being "frivolous and vexatious" or "disclosing no cause. for action in law". This is exactly what happened to me in 1997 when I twice tried to take the BBC to. court for spying on me in my living room at home; my case was twice struck out, and on the second occasion. an order was made. against me that I could not bring further civil litigation against the BBC without leave of. the court.

As the reader can guess. it is quite impossible for a person with schizophrenia, who complains about the secret. services and media interfering in his. life, to find a solicitor willing to represent him in legal action against the. persecutors. I have quite a lot of evidence of the. continuing persecution which I have posted on the website, even if the evidence is. quite tentative and perhaps open to varying interpretations.. But I have tried several firms of solicitors; some of them have acted unprofessionally. and abused me; all of them have refused to represent me. My. psychiatrist gave me the name of the firm of Bindman and Partners in central London, and I have approached them. twice. On each occasion they refused to accept my instructions.. Plainly the problem with Bindmans, which. they have admitted, is their bigotry against mentally disabled people; yet this. is not just something that is wrong with Bindmans, it is. something that is wrong with the legal system as a whole, since the legal system necessitates finding a. solicitor willing to represent you. in order to bring a case to court, but it does not have a mechanism. for providing a lawyer in the case where no solicitor is willing to take. on your case. So the British legal system is such as to prevent cases such as mine from ever. receiving an airing in a court.

So much for the civil courts. But the. criminal justice system is no better. Two years ago the Protection from. Harassment Act came into force. But again, while the Act. is all very well on paper, in practice it is unenforceable in. my case, since it would require Police action to see the. law implemented, and if the police cannot even be trusted to conduct a murder investigation competently (in. the Lawrence case), then what chance is there of their investigating complaints. against the Security

Service? Of course, it would be possible for me. to personally issue proceedings through a private. prosecution either against MI5 themselves, or against one or more of their media tools; but here. we see the same problems as with the civil courts, because first of all. I would have to find a lawyer willing to act on my behalf. Litigants-in-person do. exist in the criminal. courts, but the Attorney General can bring such a prosecution to an end by taking it over and entering. a plea of "nolle prossequi"; and I. suspect that if I were to bring a private prosecution against either MI5 or one of their media tools, then this is exactly what. would happen.

So much for British justice. But if anything. the wrongs that have been perpetrated. on me by the British justice system are quite mild to what others have suffered. Others have been. wrongly convicted based on police evasions and lies, and. spent many years in jail based on false charges. I should count myself lucky that despite the best. efforts of the MI5 secret police, I have not acquired any criminal. charges or convictions; which shows that. for all their resources and influence, and the clear imperfections in. the British legal system, there are still limits on how much subversion MI5 can. achieve.

The latest in a long line of. injustices

A comment I heard during the. recent scandal of the police mishandling of the Lawrence murder investigation is that "its. not as if the police themselves murdered him". This is not a particularly wise statement. to make about the case, since it could be argued. that the four alleged murderers. were aided in their crime by the expectation that the police would deliberately botch the investigation - which of course. is exactly what. the police did.

But in my case, this. would be a completely inaccurate thing to say - since the MI5 secret-police have expressly been. trying to nine years now to see an end put to. my life, either by having me incarcerated and my liberty ended, or by forcing self-termination on me. It. is exactly as if the secret police "themselves murdered [me]",. since that is what their aim is in their. campaign against me.

The public has heard of instances of. police mishandling of cases, of police manufacturing evidence, lying in court,. extracting false confessions to clear up crimes, et cetera.. Various instances of extra-legal activity by the secret services have also come to. light in the last few years. The unhappy. truth is that what MI5 have been doing to me for the last nine years is really nothing out of. the ordinary for them. To me it seems. unbelievable that this sort of systematic campaign of harassment, which thousands and. thousands of people in this country and abroad are well aware of, could exist for such a long period of. time with the media maintaining "omerta". But my case is not the first such. instance of persecution by the "British. secret police", and judging by the lack of any real controls on MI5, I very much doubt it will be. the last.

MI5 Have Systematically. Destroyed My Life

This is getting depressing. From the feedback Ive. received, the recipients of these faxes. are tired of hearing my complaints, and in truth I am tired of sending them.. The reason I havent yet ceased sending faxes is because I cannot think of any other effective means. of replying to MI5s actions against me, and I feel I have to. do something to try to defend myself. Three/four years ago I got the MI5 harassment out of. my system by posting about it on Internet newsgroups, and for a few. months this tactic was quite effective - I received (and. indeed still do today) support from newsgroup. regulars, and felt I could make my voice heard and break the MI5 monopoly on access to the British media.. But that was years ago, and today nobody gives. a tinkers cuss about my internet posts - so I have sought to escalate matters by communicating directly with the. politicians who allegedly. say how this country is supposed to be run.

Of course, its. quite expensive to keep up a campaign of fax messages for many weeks. Each set of. faxes takes approx 50 hours to send over the weekend, and costs perhaps 35. My phone bill for the last. quarter was 350. These figures are naturally insignificant compared to. what MI5 have been spending against me. over a similar period. It also takes a lot of time and energy to create a. new article every week, and try and find new and fresh aspects and viewpoints on MI5s. persecution of me. I am beginning to run out of both new topics and energy to write these. articles.

So I have. a suggestion to put before the MI5 persecutors who have been wrecking my life since 1990. In a few days time I. will be going on holiday to. Poland and Germany, for a couple of weeks. Previously, almost every time I have travelled. by plane, or gone anywhere on holiday, the MI5 "wreckers" have been most. assiduous in destroying these trips. My suggestion is; if MI5 leave me alone. on this next trip, I will cease transmitting. these articles. If, however, there are any clear instances of harassment (and I am very capable of recognising MI5 harassment when I. see it),. then I will make public these instances and publish any recordings I may make of them, and, unwillingly. and unhappily, continue the articles.

Read about the MI5 Persecution. on the Web

Keith Hill MP (Labour. - Streatham), my elected representative, as ever refuses. to help.

MI5 Refuse to Allow me to have a. Normal Life

Its kind of difficult to contemplate having. a normal existence when you know your entire house is bugged from top to bottom, for audio and,. very unpleasantly, video; when your employment. is systematically destroyed, over and over again; when every time you. leave the country your travel is disrupted by MI5 plants on the plane yelling abuse at you...... you get the idea. I would like. to have some semblance of a normal life, like my Polish and. English friends do. But MI5 have made this impossible, and they have leached massive resources from the taxpayer to institute a life. not worthy of the name. on me.

A few years ago MI5 were very open about their aims in. persecuting me. They were shouting "suicide" at me, both in Canada. where I lived at the time, and during my occasional visits to London. You. cant get much clearer than that. There have been instances. as recently as a few weeks ago of this intention being voiced by their side; on 15 April. 1999, a woman at the next ticket counter at the. Royal Festival Hall said;

"it would kill it, you know, it would just be overkill... they can't. stop can. they"

meaning that "they" were trying to "kill it" i.e. me and they. "cant stop".. The audio file is at;

I wonder why they "cant stop". Nobody (who doesnt know already). believes my claims - so what difference would. it make, if they were to "stop" persecuting me? Perhaps what this persons remarks indicates, is. the depth of the obsession MI5. have with this case. They have chosen at random a person from the general population,. and done their worst to ruin my life. What is. wrong with these people, that they persecute a national of the country whose citizens they are supposed to. protect?

No Chance. of a Harassment-Free Job

Since the harassment started. in 1990 I have had three jobs, the first near Guildford, the second in Oxford, and the third overseas. in Canada. All three jobs have been. systematically destroyed by MI5. It is so ironic that MI5. employs a team of agents, each well compensated for their efforts, to persecute just one person paid a mere. fraction of what they get for their "work". In fact, it is a joke. that MI5 is allocated resources for this sort of effort. If this area of government were run along commercial. lines then MI5 would be very rapidly closed down, they. produce nothing of any value, instead. spending their time obsessed with the bugging and surveillance of their. former employees like Shayler, dangerous subversives like Straw and Mandelson, and "threats. to national security" like yours truly.

Applying for my first post. university job

When I was applying for my first post-university job in. the closing months of 1990, I. found at two or three job interviews that MI5 had got there ahead of me. Interviewers knew what words to repeat from what had. been said at my home recently; MI5 had supplied them with words to hurt. me, and the "British. secret police" were trying to wreck my job search and discourage me from joining the world of work. This and the. continuing harassment in the media and by the public. meant that the search for a job took very much longer than it. would ordinarily be expected to take for a person. with my qualifications.

With my first. job near Guildford came the knowledge that MI5 were doing everything possible to make me lose the job. Despite. their efforts I managed to stay in work. for ten unhappy months, during which they made very clear to me that they. were bugging my workplace, my accomodation in Woking, my car, my home..... and they also made clear that they. had "got to" my employer in. Guildford.

Employment. with Oxford

I was. able to find a new job, with Oxford Computer Training Services (now ARIS/Oxford), quite quickly. But it became very. clear, very quickly, that MI5 were treating this job the same as the first; they tried to get. the other employees. and in particular the managers to attack me. It was plainly MI5s intention that I. be sacked fro this job. But I was not sacked; instead, after. almost a year of abuse from OCTS managers, I was forced to seek medical help, and had to take two months off for. medical leave. OCTS MD Hugh Simpson-Wells. was motivated in keeping me on by the fear that. if he sacked me, then I would take him to court for the treatment. OCTS managers had meted out to me during 1992.

Emigration to. Canada

When I emigrated to Canada. in 1994, I did think that perhaps MI5 would leave me alone, given that I had made the effort to. leave the UK and try to find a new life overseas. I could not. see any reason why they would continue to harass me over in Canada. But. clearly the MI5 agents had their salaries to. think about, since continue to harass me they most certainly did, at my home in Ottawa,. and by getting fellow employees to speak against me, as. had happened with previous jobs in the UK.

MI5 are denying me a future in. work

Former. Chief Constable of Devon and Cornwall John Alderson had this to say regarding MI5's. activities;

"MI5 is not under the. same restraints as the police. They infiltrate organisations, people's jobs and. lives. They operate almost like a cancer."

Currently I am on disability, and I can see that MI5 are denying. me a future. in work. It would be an insult to logic for me to return to work and find a job, in the knowledge. that an entire team of MI5 agents, paid in total many times what I would be earning,. would have the objective of seeing me "done down" in the employment, and ejected. from the place of work. This situation is completely wrong and nonsensical - I would. very much like to have. a job, but MI5 are preventing me from even thinking about returning to work. The culture of secrecy. in MI5/MI6 means there is no objective. oversight of their expenditure, when external oversight and greater transparency. might lead to wasteful and illogical operations such as. that against me being shelved.

Watched and Harassed at my Home and. Accommodation

As you will know. if you have been reading these articles, MI5 have watched and harassed. me at my home, and at every accommodation Ive had since 1990.. Theyve also watched me at neighbours houses in London, and at short-term accommodation such as. hotels and bed-and-breakfasts. They have used the "words" gained from these watching activities against. me, by passing these words on to other people such as OCTS managers for them. to make clear that I am being watched. where I live.

Harassed at rented. rooms in Oxford in 1992

This. was at its worst in 1992 in Oxford, where during the week I lived at rented accommodation in Oxford, and at weekends returned. to my parents home in London. I was being severely. harassed by managers at my place of work, OCTS; and it was clear from the things. they said that they were being supplied by MI5 with details of my home life, that they. were being supplied with words to repeat at. me.

In 1992 I. moved house in Oxford many times, living at a total of five rented accommodations in ten months. In January I started off living in. a rented room at Headington near. the ring road / A40 intersection; then when it became clear that house was being bugged,. moved to a rented room in

Botley, some miles away. It was at the house. in Botley that I had an "interactive watching". experience with Martyn Lewis while he was reading the news; I threw a term of. abuse at him; he first flinched, then gave a gsult of what I had just said, he was no. longer "on my side".

So I moved house again. This time to. a place in Cowley, near the Rover car works, where I stayed. for a few weeks. Because of continuing harassment at work, I soon moved from. this accommodation, to yet another rented room on Iffley Road. By this. time I was very ill and being abused continuously at work. Again, MI5 followed me to the. rented room on Iffley Road, and created new instances of "newscaster watching". There was a television. in the room which. I watched, and as you can guess the newscasters got at me when I. was watching the television. Also once I was assaulted, if thats the word for what happened, on leaving the. house; a youth grabbed me by the coat lapels, roughed me up. a bit with various terms of abuse. I did not report this assault to the police, because what was. happening to me at work was very much. worse, and nobody seemed to think that that was worthy of being reported. to the police. Later that day at work, Alex G, a fellow employee, said "I heard he was assaulted".... I. had not told anyone at work. about the incident that morning..... so once again it was made very clear that MI5 were watching my. rented accommodation and giving information about what was going. on there to managers at work.

So I moved house yet again. in late autumn 1992, this time to a rented room in a. large house on Woodstock Road. I stayed there for several weeks as the situation at work deteriorated due. to OCTS managers abuse, until I was forced to take sick leave from. work for two months and attend hospital as an outpatient; at which point I gave. notice on the room, and returned to London.

MI5 continued to harass me after the. diagnosis of serious illness was made. As. reported previously, they harassed me on a flight to Spain in December 1992; and in 1993, when. I returned to live and work in Oxford, they again bugged my rooms, as. well as my workplace, although the intensity of the harassment was very much. less than in 1992.

Watched,. followed and harassed in Canada

It dismayed me to find that MI5. would not leave me alone after I had settled in Canada. In. January 1995 I rented an apartment at the Bayshore complex in Ottawas. west end. For some weeks there was no sign of the "buggers". But. then it started all over again. They first bugged my car, which had a car alarm installed - the alarm. went off two or three times in a. single evening, and the following day gave a signal that the car had been broken into.. Then they bugged my apartment, and in particular they installed bugs on the phone line. in my apartment.

In September 1995. I moved to a new apartment in Ottawas Bytown Market area, the restaurant and entertainment heart of Canadas capital.. This proved a serious mistake. In the west end I had been. fairly distant from the centre of town where MI5. concentrated their efforts at turning people against me. In. the Market area it was much easier for the persecutors to motivate people to harass me, and over the next couple of years. there were frequent instances of harassment. by the general public.

From 1995 I had some. Polish friends in Ottawa, and as the reader can guess, MI5 have spent much effort trying. to break up this friendship. They supplied various things about my home life to these friends,. for example where I was. living in the Market, directly over the road were the studios of. a music radio station, which you had to "look up" to see; and MI5 told these friends. that I was "looking up" to see the radio station; so the friends then replayed these words back to. me, that I was "looking up". MI5 have. also made various sexual slanders against me, and these friends also unwittingly replayed some of the words they had been imprinted. with by the MI5. persecutors.

MI5 Will Never Allow Me to. have a Normal Life

I have heard many excuses as to why MI5. continuously prevent me from having a. normal life. We are told that MI5 are defending the country against a tere. to zero.

When I have travelled abroad, they always put. their people on the flights, on the journeys I undertake, to continue the harassment, so that I. am put off further overseas travel, and chained to my home in. London. Yet even this is illogical,. because when I lived in Canada, they would still put people on flights back to the UK.... and. what possible reason would they have for doing that? Perhaps the. truest words to describe the MI5 persecution is that reason has nothing to do with their. activities - sane people do not. behave in the way the MI5 British Secret Police have been doing.

Summer 1999 -. more MI5 harassment?

In only a few days time I will be going to Europe again.. This time I have deliberately chosen to travel by a non-UK airline;. so we will see if they put their paid agents on this foreign carrier, we will see if they. try to harass me on this. non-British flight.

If they do. harass me on this trip to Europe, or if they resume the harassment in. London after I return home, then I will continue to report their activities in these faxes. As I. said at the beginning of this article, I would very much like to not have to send these. articles any more, but that is not. my decision to make - it is entirely up to MI5 to cease their pointless persecution of me,. once and for all.

MI5 Persecution Update: Friday. 9 July, 1999

Harassment. in Poland, July 1999

And still it continues.... in my last fax I said. that provided MI5 made no attempts at harassment during my two-week holiday this summer,. or after I returned to England,. then I would discontinue these faxes. Unfortunately MI5. have continued to harass me, both during the holiday and after my return. to London. I really dont want to continue these articles, since they take up so much time and. effort, not to mention expense; but the Security Service wont even. let me have a holiday in peace and quiet, so I have to make further efforts. to bring their activities out into the open.

In early July I visited my aunt and her family in Poland.. On Saturday 3 July 1999, I. went to a family barbecue at an allotment outside the city. One. of my aunts family has previously shown himself to be in the "enemy" camp, by saying the Polish equivalent of "something. wrong with him", and various other. unprovoked insults. It is disappointing that one of my family could forsake the usual. ties of blood and take part in the actions against me, but thats the way it is. This guy turned up at. the barbecue, and started making insults against me. In particular,. he started to say something about the video camera which I had brought along on. the trip,. and the relevance of the video-camera to my fight against the persecution. It seemed pretty obvious to me that my enemies had told. him to turn up to this. occasion, and most likely schooled him in precisely what words to. say; since hes an unintelligent person and would not be able. to think for himself what insults to make against me.

Harassment in London, week ending Friday 9 July. 1999

Got back to London Wednesay afternoon. Two incidents on. the Underground returning from the airport. Unfortunately I. wasnt recording because I wasnt expecting trouble, so. these slipped through the net. One of these was verbal sexual abuse, of the type Ive. heard many, many times before these last. three-and-a-half years.

Yesterday, Thursday 8/July/1999, I. switched on Heart FM which had never "got at" me before.... and the presenter started making jokes. about "mad, crazy" etc. Again, wasnt. recording this because Id never had any trouble from this radio station. and wasnt expecting any.

Also yesterday, on a bus. (155?) from Balham to Clapham, a couple of girls started harassing me with taunts of "crazy". By now. I was expecting trouble and recorded an audio file of this. instance of abuse, at web URL;

The cynical reader might think. my demeanour or behaviour had given rise to the taunts of. "crazy" recorded above. But I assure you my behaviour on the bus would not have. made anyone think I was ill; and the taunts the previous day were the same sexual words as. previously; so I'm quite sure that these incidents. are either deliberately staged, or indicative of an overall high. level of awareness among the London public, particularly in the part of. London where I live.

Keith Hill. MP (Labour - Streatham), my elected representative, as ever refuses. to help.

MI5 Persecution: Harassment through the. Radio

One of the aspects of the MI5. persecution has been harassment through the broadcast and print media; and one of the. aspects of harassment through the. broadcast media is being "got at" by radio presenters. This being "got at". from the radio takes various forms, the most obvious form being through overt. or hidden words and insults. But there are other, subtler forms. In Canada a couple of years ago, I used. to listen to the local radio. stations every morning driving to work, and listened to the music only, switching between radio station presets rapidly as soon as. a presenters voice came on, so that I would not be subjected. to any verbal harassment by the D.J.s.. But they found a way around this; they kept on playing the same song, every bl**dy morning at the. same time, which had the words "all coming. back to me"; the perceptive reader will remember that the words "coming back" have special. meaning (see the Private Eye cover at web URL; for. the
hidden. meaning).

And thats not the only time theyve. allowed the songs themselves to be used as abuse against me; many years. ago Radio-1 in the UK did exactly the same, and the DJ even made it explicitly. clear by saying, "dont you sometimes feel as. if the songs were made just for you".

"We should be done for attempted. manslaughter" says Chris Tarrant

Capital Radio DJs have been "in on it" from the start.. One of the first things I heard in the summer of 1990. was from a Capital DJ who said, "If he listens to Capital then he can't. be all bad" (supportive, you see. We're not bastards). Much of what came. over the radio in 1990 is now so far away the precise details have been obliterated by time.. No diary was kept of the details, and although archives if they exist may. give pointers, the ambiguity of what broadcasters said would leave. that open to re-interpretation.

In spring 1994, Chris Tarrant on his Capital morning show. made an aside to someone else in. the studio, about a person he didn't identify. He said, "You know this bloke? He says we're trying to kill. him. We should be done for. attempted manslaughter".

That mirrored something I. had said a day or two before. What Tarrant said was understood by the staff member in the studio he was saying it. to; they said, "Oh no, don't say that" to Tarrant.. If any archives exist of the morning show (probably unlikely) then it could be found there; what. he said was so out of context that. he would be very hard put to find an explanation. A couple. of days later, someone at the site where I was working repeated the remark although in a different way; they said. there had been people in a computer room. when automatic fire extinguishers went off and those people were "thinking. of suing for attempted manslaughter".

Pirate Radio "gets. at" me

In. another incident in 1990/91, Id been listening to a pirate radio station in South London for half an. hour, when there was an audible phone call in. the background, then total silence for a few moments, followed by shrieks of laughter.. "So what are we supposed to say now? Deadly torture? Hes going to talk to us now, isnt he?" which meant that. they could. hear what I would say in my room. Note the word "deadly" - they give away their. purpose.

It. constantly surprised me that MI5 are so easily able to subvert broadcasters, and, in this. case of the pirate station, to do so, so quickly. I think. the answer to this question is that they must have very wide contacts in the broadcast media;. presumably some or in fact many of those contacts are literally "bought". In the. same way as they tried to buy Jon Snow of Channel Four news, they must have bought many. broadcasters and use. them both directly to make insults against me, and promulgate their points of view; but also, they must use. these "bought" broadcasters to influence other television. and radio presenters, who might not even be aware that it was on MI5s behalf. that they were being influenced to "get at". me.

BBC-Radio-1 D.J.s celebrate my job termination. in November 1991

This is another. one from the "early years". At the beginning of November 1991 my. employment in Woking, Surrey was terminated. Chris Tarrant of Capital-FM had already made. nasty remarks about both my work for the company, and the managers of the company themselves - "so theyre. not really a serious company, well theyd have to be to employ. you wouldnt they".

So when I was terminated, as you can. expect, BBC Radio 1 D.J.s celebrated. On the Saturday afternoon (either 9/Nov/1991. or 16/Nov/1991 - I cannot remember precisely) I briefly. listened to Radio-1 and heard the disc jockeys loudly proclaiming "youre useless, you should be. sacked". On the same day, I went down to the. Kwik-Fit in Tooting to get my cars tyres replaced, and in the office. ran into a couple of their staff, one of them with an Australian accent, who said "what do you. think about it then? Its getting killed on. the radio."

Plainly, if. a random car-repair shop in Tooting knew about the persecution, then many thousands of other people across the. capital and all over the country must have known. And. the phrase "getting killed" shows very clear awareness of what. the MI5 Persecutors intentions towards me were in 1991, and judging. by the continuing harassment, still remain. today.

Recent Feedback from. Virgin-Radio

As readers will know, from. mid-March 1999 for some four months, every weekend, I have bombarded Westminster MPs. with faxes about the terrible, all-encompassing MI5 Persecution. (Jesting aside,. it really is terrible and all-encompassing,. in the UK anyway.) In June 1999, after I'd been at it some three months, I started getting. "covert" feedback from Virgin Radio.

The first feedback I got. was from Danny Baker, on Sunday 13th June. That weekend I was sending. an article which contained biting criticism of the police inaction in this case. Danny. Baker on his Virgin radio show started an angry rant that "he knows. it's rubbish", ie. he was rubbishing what I'd said in that weekend's faxed article. Unfortunately I wasn't. recording this. programme.

The next possible Virgin-Radio feedback was a week later on. 19th June 1999. This is contained in the audio file above, in. which Johnny Boy on his "Wheels of Steel". programme says;

"and if you would like to put a triple. play together, ahhh.... because quite frankly Hipster and me are running out. of ideas...."

He goes on to counter. Hipster's "how dare you" with a protestation that he is "only. joking". You can listen to this incident on my website at URL;

What I. reckon is that my article faxed to MPs that weekend was forwarded by one. of the recipients to Virgin Radio. My article had included the words;

"I am beginning to run. out of both new topics and energy to write these articles."

So. what I reckon is that Johnny Boy read the article.... and rephrased the above. line "run out of ... new topics" to "running out of ideas". I recognise that this is. a pretty tenuous inference to make.... but do listen to the audio file,. from the "ahhh...." pause in JB's speech you can guess he is about to say. something "risky" and at someone's expense. Anyway, I. listen to the Wheels of Steel regularly and will continue to do so, recording it. as I always do - so any future funny remarks will get immortalised on my website! (There was. a previous incident. from August 1998 which is preserved at web URL;

but I am. sufficiently uncertain about it that I have not included it in this. article.)

First Ever Radio Reference - Alan Freeman. of BBC-Radio-1

The first time I was ever referred to on the radio was. sometime in May or June of 1990, by Alan Freeman of BBC-Radio-1. Note. that this isnt an "interactive listening" episode, its different, this. was Freeman reading out. a letter from one of my "real life" enemies.

Id. acrimoniously broken up with some former friends in January of 1990, and I think they were still trying. to cause me trouble in June of that year. Freeman on his rock show read out a letter. from an "Andrew Turner"; one of my. acquaintances from January 1990 had been called Andy Turner, so I think its the same guy. Freeman quoted Turner as. saying various. things about me, in particular Freeman said "thats a hell of a letter you. wrote there Andy", "with a schizophrenic you're never alone", and something about the "one who wore out his welcome. with random precision" (from the words. of the Pink Floyd song).

When. I was looking for primary causes of the MI5 persecution, this letter which Freeman. had read out on his programme struck me as being potentially one of the sources of the persecution.. I know Turner and various others in that group were very bitter at. what they saw as their failure and my undeserved success, and they. were quite determined to upset the applecart. Of course several other primary. causes are possible; I do not know why MI5 chose me as opposed to someone else, and MI5 are. hardly likely to. tell me.

"Absolute Obscene" David Hepworth. of GLR

This one Ive assigned a 100% rating on the website. There are actually. two separate incidents, which are linked through. the D.J.s choice of words. The first incident can be heard in computer audio at web. URL;

On. 21/Feb/1997, I was listening to BBC GLR, by stealth. Back in 1990 I used to have Capital blaring out of the speakers all over the. garden ("if he listens to Capital then he can't be all bad", thanks. ever so much). But now I listen on my walkman on headphones. with the volume turned right down. It could not possibly be overheard. by any listening device, no matter how sensitive, because. sound does not carry from the phones.

Yet. somehow they are still able to tell which station I am listening to on the walkman. And last night, I bravely tuned. to GLR 94.9FM at around 8.45pm. Everything went well for the first half hour. or so. Around 9.10pm, Hepworth said. the following after the song "Come Around" by the Muttonbirds.

"coming up. after this, we got the rock-and-roll A-level, we have, I assume, Brian do we have an. embarrassment of prizes in there, we do, don't we,. absolute obscene amounts of prizes, there will no doubt be a riot at the back door, and that's, er,. A-level coming up after this"

The key phrases in what he said are, "EMBARRASSMENT of prizes",. and what he himself emphasized verbally, "ABSOLUTE OBSCENE amount of prizes". It. is my. belief (based on content and tone of voice) that when he spoke these phrases he knew I. was listening, and that the phrases refer directly to my situation. The "EMBARRASSMENT" is the embarrassment he and other. media people would feel at. having their wrongdoing exposed; the "ABSOLUTE OBSCENE". (which he verbally emphasized) described the disgusting sexual abuse which. the harassers have been throwing at me.

There was a second incident, on 9/May/1997, which may be found. on the web (with computer audio) at. URL;

This. incident again contains the words "absolute embarrassment of prizes", with the same emphasis as the first. instance, and laughter following the phrase. So theyre aware of the complaint I. made on Usenet after the first incident; and they. are so arrogant that they do exactly the same again.. They are so arrogant, they know they are being recorded and that what they say will be published on the web, but they. dont care. What corrupt media, and. what a corrupt country to have such corruption in its media.

Three Years of "MI5 Persecution". Faxes

Ten. Thousand Faxes, and Still No Breakthrough

In the last three years I have sent at least 5,301 faxes. directly from my computer, and 4,478 faxes through Demons. extremely useful TPC.INT service, to politicians and the media, in the subject of the. "MI5 Persecution".. This has obviously cost me quite a lot of money, not to mention time and. effort. The aim of all this communication has been to try to put discussion. of the "MI5 persecution" into the public arena; unfortunately, this aim has not been achieved,. yet.

This fax will be. my last transmission for the time being, since the summer recess is almost upon us. Depending on what the persecutors. do between now and the autumn, I may or may not resume. faxing later this year. In the article dated 18/6/99 I said Id stop the articles if MI5 left. me alone; but they seem. to have no fear of these articles, since they kept pursuing me in Poland and after. my return to the UK. Again, if they leave me alone this summer then I wont have. to resume the articles in the autumn; but I think its fairly obvious that MI5 have. nothing better to do with their time than to. go after me, and its almost pointless to make this offer when I know they wont. cease harassing me.

TPC.INT. 1996, 1997, 1998.....

Three years ago I was living in Canada, and. the only economic way of sending. faxes to the UK was through the international email-to-fax gateway TPC.INT. This highly useful and totally free. service converts emails (which may have Postscript-formatted attachments) into faxes. which it delivers to any number within the UK. Using the. telephone book, I constructed a computer. database of M.P.s fax numbers, and used this database to. deliver copies of the "FAQ - frequently asked questions" article which Id written some time. earlier.

This service is still. operational, but given that I have resided in London for the last year, I do not need to use Demons service when I. can send articles directly from my own computer using its fax/modem, which. is what I have been. doing since 1998. However, instead of just sending the FAQ article, Ive been composing articles on various aspects. of MI5s treatment of me. Since their activities have been going. on for nine years now, and there have. been various aspects to their actions; they have harassed me at work, at home, through the media, etc; I have so far not. run out of things to say, particularly since. their harassment of me is still ongoing, and I have been able to record. the actual words used by their paid agents on my minidisc-walkman. Since mid-March 1999. I have been sending these articles pretty much. every weekend.

Anyway, as mentioned above, I intend this. to be the final transmission before the. summer recess, and it would be nice not to have to continue these articles in the autumn. But thats something that depends on. them, not me,. and their attitude is unfortunately clear.

Why. am I sending these articles?

Because I want the harassment. to stop. The cynical reader might think from these articles. that I "thrive on adversity" and would be lost without the harassment. to complain about; but that is not the case. In a perfect world I would like to return to work, in a job unsullied by. MI5s attempts to ruin it; I would like to live in a house which wasnt bugged, with my. words being repeated at me wherever I go; I would like. a normal life. I do not particularly thrive on adversity; I. am beaten down by adversity; the purpose of these faxes is to. try to bring the whole matter out into the public arena, where the rights. and wrongs would be visible to all, and once that were to happen, the. adversity might cease. I have had something approaching a normal life a. couple of times in the last nine years, but always,. in the end, MI5 turn up and ruin it. I just want these people out of my life, permanently, and. the only way of doing that is to kick this business into the public arena, and shame MI5 so that. they are incapable of doing me. further damage.

Having said. that, unfortunately it seems fairly obvious by now that these faxed. articles are not going to achieve that aim. Some of the recipients know what I am. saying is true; but they choose to stay quiet - wisely, because. if they were to admit the truth of these articles, then they would bring the wrath of MI5 down on their heads. Presumably most recipients. do not know these articles are true; their. reaction to me is the same as my reaction to the other. apparently deluded people who have sent me email after reading my. webpage to tell me it happened to them too; the reaction being, "leave me alone,. I dont want to know". Its sad that many M.P.s have given me this reaction, because my case. genuinely is different; I genuinely am. telling the truth, and the harassment genuinely is happening to me, and some recipients of this. fax know this to be true.

"Write to your own. M.P."

My local M.P. is Mr Keith Hill, Labour-Streatham. He refuses. to have anything to. do with me. He refuses to represent me, he refuses to talk to me, he has told me not to communicate with. him. He has done absolutely nothing to help me, and he has told. me he will do absolutely nothing to help. me.

Other M.P.s, recipients of these faxes, have for quite. some time been telling me, "write to your own M.P.". On 23. March 1998, Paul Burstow M.P. wrote to me; "Whilst I take the. issues that you raise seriously, there. is a strict Parliamentary convention that one Member of Parliament does not take up anothers casework. Can I suggest that you. write to your own M.P. at the House of Commons?". Hopefully the above paragraph will make clear. that I have written to my own M.P. and he has proved unhelpful.

Other M.P.s have told me the same thing. On. 21 May 1998, John McFall M.P. told me, "... there is a parliamentary convention that. M.P.s do not take up cases of people not in their constituency..... therefore. can I suggest. that you write to your local M.P. who will be better able to assist you." . And on 8 June 1998, Michael Foster M.P. wrote to me that "M.P.s are inundated with unsolicited faxes .... M.P.s have a. considerable amount of constituent work to. deal with, thus other M.P.s constituents cease to be of concern in so far. as they should have a voice and representation".

Simon Hughes M.P. wrote to me on 5 November 1998, "There is. a strict parliamentary convention which states. that I am not able to represent individuals who are not constituents of mine.. My advice is that you find out who your own Member. of Parliament is rather than circulating your story to all M.P.s.". To my suggestion that Keith. Hill M.P. was doing nothing to help me,. George Foulkes M.P. sent the following faxed response; "If Keith Hill your own M.P. cannot help no-one else. in the House of Commons can.". But it is clearly not a case of "cannot" help, but "will not" help. I have detailed in letters to Mr Hill specific. ways in which he could help. me, first of all by finding a lawyer to represent me. It is. Mr Hills job as a Member of Parliament to represent his constituents; if. he chooses not to do so, then it reflects badly on him.

Kate Hoey Sympathises, but. says, "Write to your own M.P."

Here is. part of a letter Ms Hoey sent to me on 15 June 1999.

I appreciate that. you have concerns about the persecution and harassment that you feel you are experiencing but I note that your MP is in. fact Keith Hill.. There is a very strict Parliamentary code which means that M.P.s can. only take action on matters that relate to their own constituents.. I am aware that you are not happy with the fact that you do not feel. Mr Hill will assist you but I am afraid that I cannot take any action on. your behalf.

Ms Hoey plainly belongs in the camp of people who. do not know about the reality of the "MI5 Persecution".. She doubts its existence; "the harassment you feel you are experiencing". She urges me to see Mr. Hills assistance, as have other M.P.s. detailed above.

Really, the fact that I am. unable to obtain assistance from any other M.P., if my own alleged "representative" Mr. Hill chooses not to represent me, is. a very basic weakness in the Parliamentary system. Beinggmainly events at my former employers in Oxford during 1992,. when I was harassed constantly by manager Steve Mitchell for most of 1992, and. was forced to begin attending hospital as an outpatient as a. result. This harassment was obviously of Mitchells own volition, since I observed him harass. similarly another new worker two years. later; but it was also at MI5s instigation, since they. kept providing him with words from my home life which he then proceeded to abuse me with.. Yet this is not the only employment that MI5 have destroyed; the MI5. persecution has lasted from the end of my student days until the. present time, during which I have had three jobs, all of which have been in. various ways destroyed by MI5s deliberate actions.

In March 1999 I decided to try to force the issue. once and for all. Ever weekend for the last four months, apart from two weeks when I. was on holiday,. I have sent original articles by fax directly from my computer to Westminster politicians. Here is a summary of the articles. of the last four. months;

How to Identify the. Persecutors

Their use of Schizophrenia. to discredit my claims
Comparing. the MI5 Persecution with German "Final Solution"
MI5 are Plainly Trying to. Kill Me
MI5 Waste Taxpayer Millions. on Pointless Hate-Campaign
Four. Years of "MI5 Persecution" Posts on Internet Newsgroups
MI5 Agents. are Clinical Psychopaths
BBC. Newscasters Lior the Victims of MI5
MI5 Have Systematically. Destroyed My Life
Harassment through. the Radio

To my. deep worry these fourteen faxed articles have still not achieved the objective of kicking the matter out into the public arena and. forcing an admission either. from the persecutors, or from those "in the know", which includes. some M.P.s.

I dont really know what. else to do to try to bring the "MI5 persecution" out into the open. I. would have expected that these weekly faxed articles would have had some effect, but the only result has. been M.P.s telling me to contact. my own representative Mr Hill who refuses to talk to me. I understand the convention that M.P.s deal. with their own constituents and not those of other M.P.s, but there seems to be a. gap in the process since it allows your own M.P. to refuse to deal. with you, and then. you are totally denied any representation at all.

Conclusion

The only conclusion I can inform the readership of these. articles of, is that there is no. conclusion to this matter, yet! Three years of intermittent articles, and four months of. faxes every weekend, have been absorbed. by some of the most powerful people in the country, to no effect.

Whether these. articles continue in the Autumn is entirely up to the "opposition". I offered them. a cessation of complaints if they would leave me alone on holiday. in June/July, and they went right ahead and harassed me anyway, on holiday and after I returned to London.. If MI5 cease their activities now, then I wont have to. continue these faxes in the autumn; but I suspect they wont cease,. which means youre in for more articles later this year. "There will be no. conclusion."

MI5. Want Me to Send You these Faxes

MI5. seem to Want to Spin this Business out for as Long as Possible

The. MI5 persecution has now been going on, starting from June 1990, for well over. nine years. If I knew how to put an end to it then I would do so. Of course MI5 have. indicated how they wish to finish the matter, by finishing me off; they. indicated this very clearly years ago when they were. shouting "suicide" at me.

But a. deeper truth is that the MI5 agents carrying out the persecution rely on it for their income and their livelihood. They have. absolutely no interest in anything other than spinning out the. whole business, because that is how they will. maximise their earnings from their employer for the "work" they. do against me.

A vital part of the fantasy structure MI5 have created about me is. that I am somehow a worthwhile target. If you bother to. read these faxes, if you browse my website, or perhaps read my posts on. the uk.misc newsgroup, you will have by now twigged that I am a totally insignificant person. who in a proper dictatorship like. East Germany would not merit five minutes of Stasi time. But Britain. is improper in the methods of its corruption, and the Security. Service seeks to present me as being a an evil fascist, an evil communist, an. evil something-else, and even a "national institution".

It occurs to me that to some extent I am playing into their. hands, into their scheme. of things, by writing these articles and sending these faxes.. By doing these things, I elevate my profile, and fuel MI5s paranoid obsession with me. But to stop sending faxes would be to give. up the only hope I have. of seeing their campaign "outed" and justice done. Certainly there is no point going to. the police again; and as remarked in a previous article, the Security. Service Tribunal routinely whitewashes every complaint that is placed. before it.

So although MI5. seems to want me to continue sending these faxes, doing this is the only real chance of getting. this business out into the open. And so Ill continue trying to kick. down their house of cards. At least my situation. is less serious than that of some other victims of the secret services; unlike. Shayler I am not broke and exiled; unlike Fayed I have not. lost a son to the posited activities of the secret services. All I have lost is some of my health, some. of my life, and some of my possible career.

MI5s Abuse. of me is without Cause or Reason

It. constantly puzzles me that MI5 refuse to leave me alone, wherever I go and whatever I do, or rather,. whatever I dont do, since Im not a very socially. or otherwise active person. When I am in England, they chase me all over the place, and once theyve found me, they pay people. to shout rude words at me.. When I am in Europe, they again chase me all over the place, and as usual pay people to shout obscenities at. me. When I am in Canada or visiting the States, they faithfully chase me all over. the place, and when they find me,. pay people to shout obscenities at me.

It is hard to avoid the. conclusion that these MI5 operatives who chase me are total lunatics. You will remember. from a previous articles the assessment "MI5 Agents. are Clinical Psychopaths". They have tried to blame me. for what they do and what they say; yet their lies have been wafer-thin, and are clearly seen to be oiled by the money. which they acquire from the Government,. and ultimately from the taxpayer.

They have tried various lies to put. the blame on me; "we have to abuse him because hes a nutter", as if there. werent many tens of thousands of other people with schizophrenia. in the United Kingdom. Their choice of abuse words is telling; subconsciously perhaps. they realise that it is they who are the "nutters", and they. try to project their own illness onto their target.

MI5 Operatives have Nothing Else to Do With. Their Time

Ive seen the same "Alan Holdsworth" person. three or four times over a period of several years. I saw. him at the Civic Hospital in Ottawa in the Emergency Ward, where he falsely. declared his name to be "Tad"; at Ottawa airport in summer 1998; and on. board another flight in 1995.

So. what we see from the above paragraph is, the same people are delegated to watch me for many. years. Without me, they wouldnt have a job. They literally have nothing else to do with their time,. except indulge their voyeurism against me. With this observation,. we come to the core of MI5s campaign against me; these people are not fit for any job other than. the exercise of voyeurism against me, and if sanity were to. land on MI5 then they would be out of a job. If. sanity were truly to land then these people and their employers would be prosecuted. for offences under the Protection from Harassment. legislation, which they are clearly breaking.

It is one of the ironies of their campaign that MI5 have been trying. to make. me an object of ridicule for completely trivial things I have done, while MI5. themselves have simply not mentioned how ridiculous is their own behaviour and that of broadcast media journalists, in spying. on me while they read the news for example. If the whole truth of. this business is ever exposed, and despite. all my efforts it still seems there is a block on its exposure in Britain, then. the rights and wrongs will be clear to all, and no. amount of MI5 lies will be able to change that. MI5 presumably do realise. just how damaging such a revelation would be both to themselves, and to broadcast media. such as the BBC and ITN, because there has. not been even the slightest chink in the armour, despite four and a half years. of my complaints on internet newsgroups and by fax to politicians and the. media.

MI5s Final Kick in the. Teeth to the British State

For someone. like myself born in the late sixties it seems peculiar to think. that Great Britain once used to have a say in the destiny of foreign peoples in far-off sections of the globe. Modern Britons tacitly. accept the lowering of their country to a third-rate power. reliant on the United States for what little say it has in the world. A. third-rate power, now "reverse-colonised" by third. world peoples it once ruled and riven with internal problems so severe the government hardly dares. acknowledge them.

To this third-rate power the MI5 secret police are. delivering the final kick in the teeth through a campaign of persecution which. is guaranteed to hold the state. up to ridicule throughout the world when it is finally exposed. As a "thought experiment" suppose the French or the. Spanish security service had done to. one of their own born citizens what MI5 has done in this. country. Suppose say the Spanish had planted hidden cameras in his home, for the perverted pleasure of their. state television newscasters, just as hidden cameras have been placed in my home for. the perverted pleasure of Martyn Lewis, Nicholas Witchell. et al. Suppose the Spanish service. had for nine years been trying to force suicide on their target; at times, so blatantly. that they shouted the word "suicide".

Now suppose they were. caught.

Of course,. as long as MI5 arent caught, theyre laughing. The psychopathic security. service agents gets their kicks from shouting abuse at me; the newscasters,. Lewis, Witchell etc get their jollies, "it was so funny", we were watching this bloke and he couldnt do. anything about it.

But once theyre caught, the. sky falls in. Of course, the "patriotic" MI5-funded media in Britain will. try to put the best spin on the MI5/media activities; it was the targets. fault, of course. But most of the world bears no allegiance to Britain. If this business is ever. exposed then a weakened Britain will. become the laughing-stock of the world. And I promise you,. the security services persecution of me will be exposed. MI5 has delivered a. final kick in the teeth to the British state, and I will do everything I can to ensure the world hears about. what they have done.

Metropolitan Police Refuse. to Investigate the MI5 persecution

I have. on a couple of occasions tried to motivate the police to investigate MI5s actions against. me. On each occasion they have refused to do so. In 1995 I went to. my local police station and spoke to an officer there;. he refused to accept my complaint, and seemed interested only in seeing me leave the station as. quickly as possible.

Earlier this year. I had some communications with Det.Sgt.Richards of Charing Cross police. Again I asked him to. deal with MI5s actions against me. Unfortunately DS Richards conformed to the. negative stereotype of the bigoted, ignorant "copper"; he said, "I have read your various. bits on the internet. I'm afraid. there is no substance or credence to it. It's an absolute load of rubbish.. I don't investigate rubbish. I can't be more blunt or to. the point than that."

You have to wonder at the state of. law enforcement in Britain. If the victim of a murder is black,. as happened in the Lawrence case, the police deliberately botch the investigation. If the victim. of a crime is mentally ill, and the perpetrators are the secret services, as in my case,. then the police refuse. to even begin to investigate the crimes committed. Politically Britain is a third-rate country,. but from the point of view. of obtaining justice, Britain ranks down there with third-world countries. You almost feel that MI5 and their media. buddies would not even have any shame if their activities. against me were exposed; after all, why should they? they have the money, they. have the control, OK so perhaps theyve broken a few dozen laws, but doesnt the fact that the. police are too corrupt to investigate these crimes, doesnt that prove. that in fact no crimes have. been committed?

I should. say again what I have said earlier in this article. My losses over the. last nine years have not been as great as those of other victims of British Secret. Police malefaction. Fayed lost his son to their murderous activities; in my occasional communications. with former MI5/MI6 employees. I have been informed that a "permanent solution" is not uncommon for. opponents of the British secret police. I have lost health and financially, but am obviously well enough to keep fighting my. case. Others have lost much more than I. If the joke which. is British "law enforcement" refuses to enforce laws against the security. services then that is something that is recognised in other countries and Britains. stock correspondingly falls. Not that it. has very far to fall; the days when England had any say in. the world are long gone.

MI5 Want. These Faxes to Continue

Before the holiday,. I said that if MI5s harassment of me stopped, then I would cease my complaints. They. have known very well that if they continued to harass me then I. would resume the fax campaign in the autumn. Yet they have not. stopped persecuting me. Recently a woman outside my domicile screamed her head off with abuse in the direction of. my window; and on Saturday 2 October, when I was. shopping at a nearby supermarket, a man shouted the particularly vile sexual swear word which. I have heard many times before over the last. few years.

MI5s attitude shows complete arrogance. Yet it also shows that. they want the faxes to continue and deliberately try to provoke. me into sending further faxes.. The reasons for this are given in the first paragraphs of this article; the MI5 operatives who persecute. me have nothing else to do with their time; to. make their campaign, against an apparently unreacting target, have some value, they have to force me to react. in some way against their actions; and by. reacting in this way, by bringing their campaign to the attention of British politicians, I play. into their hands, by giving their campaign the attention and importance which they. feel it deserves.

In the short term, by sending these faxes, perhaps. I am doing something they want me to do, but. in the longer term it is undoubtedly more in my interest. than theirs for their activities to be exposed. If their operatives truly do wish to. see these faxes continued then they are committing a serious mistake, because it. significantly increases the risk if M.P.s. (some of whom already know about MI5s activities against me) are advised of my. side of the story.

I will continue to monitor and. record the secret services activities against. me over the next few weeks. If they diminish and cease, as I hope they will,. then I may be able to call a halt to these faxes; but that it something which is entirely up. to them; recently their continued harassment makes clear that they. do wish the faxes to continue, and in all sincerity I do think they will continue their. activities and make it impossible for me to cease these faxes. It may trouble. you to receive these articles, but it troubles me much. more to be on the receiving end of a national persecution campaign; and while. Britain does not have free speech provisions as does Canada in the Charter of. Rights and Freedoms, and the US. in the first amendment to the constitution, in practice I do not think anyone is going to try to have. me locked up for speaking the truth. I still cherish the hope that. the veracity I express will be shown for what it is, and that the truth. will prevail and make me free.

Removing the Mask of Anonymity from. the MI5 Operatives

Undoubtedly one factor encouraging the MI5 agents actions against. me has been the fact that they can shelter behind a mask of anonymity. while they carry out their abuse. This is both a sign of their realisation that. their actions are. criminal; for crimes are harder to pin down and make a coherent complaint about when their. perpetrators are unknown; and it is a sign of their cowardice, since they. lack the backbone to say things to my face themselves; instead they almost always. rely on third parties to carry out the actual acts of. abuse.

On a few occasions. I have seen the perpetrators, but on each occasion they have managed. to preserve their anonymity. They travelled on the same British Airways flight as me in 1994; but. BA have ever since refused to give up the. passenger list for the flight, and the police and lawyers have proved useless in obtaining their identities from. the list. Also one of them followed me into A&E department of Ottawas. Civic Hospital a couple of years ago, and gave his name as (if I. heard correctly) "Alan Holdsworth"; but the doctor refused to give out his identity. when I later tried to speak. to him.

If only we knew the identities of the individual operatives, then it. would be possible. to find out the identity of their employing organisation. But I think we know the latter already, since I. have been accusing them on internet newsgroups for four and a half. years now, and they have never denied my guess. Indeed, when I was travelling. in January 1996 back to Ottawa, two youths. on the (British Airways again, unfortunately) flight made a lot of noise at me, one of them saying to the other. that I "didnt know who we are". That is a. wafer-thin denial; I had been saying for a year that they were MI5, so a stronger denial would be necessary if. my guess were truly mistaken. I. think the lukewarm denial was worse than no denial at all, since it confirmed my guess that the. employing agency was indeed. MI5.

Conclusion

It has been suggested. to me that by sending these faxes I could be making trouble. for myself; but I dont think so. My psychiatrist knows what I am doing; indeed I have given him. a couple of these articles for him to cast an. eye over.

I dont want to have to. send faxes for the next year, or the year after that. But that. is entirely up to MI5. If they continue to persecute me then I am forced into defending myself. The. ball is in their court, and it is entirely up. to them what they do. If as I suspect it is their intention that these faxes continue, if that is what they insist will happen. then so be. it.

MI5 Persecution Update:. Friday 31 March, 2000

22,544 Faxes Delivered in Three Years, and. Still No Breakthrough

In the last three years I have sent at least 22,544 faxes to. recipients in the UK, of which at least 13,974 have gone to Westminster. Last. weekend alone I sent 832 completed faxes to politicians,. the media and various others, on the subject of MI5s. mistreatment of me these last ten years.

I believe some of the recipients know of. MI5s actions against me in the last decade; yet they maintain strict. "omerta" in fear of the security services persecution. actions being made public.

MI5 Insist that these Faxes must. Continue

Between September 1999 and mid-January. 2000, the persecutors, whoever they might be, mostly left. me alone. I counted only three incidents in almost five months - which is a lower. rate than at any time since June 1990, when this business. started.

By leaving me alone for several months,. the "oppressors" were making an implicit assurance that they would. continue to leave me alone in the future.. On 11 January I posted to an internet newsgroup accepting what I saw as their. assurance of no further harassment, stating that I would cease sending these faxes - which is the only thing I do in my. defence - if they continued to leave. me alone. And for two weeks I did indeed refrain. from distributing these articles.

But MI5 acted in bad faith. From. the last week of January until the beginning of March, they resumed their hate. campaign against me with a vengeance. They even put people in my road three times in February,. one instance of which I recorded.. They resumed their normal behaviour of bugging my phone and house, listening to where I would. go, and then placing people in that location to. "aggravate and annoy" me.

What MI5 did in. February is plainly a contravention of the Protection from Harassment Act 1997, since. it has caused me "alarm and distress" as specified in the Act. But it is a waste of. time going to the police with a complaint, since the police have done, and will do, absolutely. nothing. I complained to the Metropolitan Police in 1995, and they refused to take. my complaint.. When I complained again in 1999, the detective sergeant laughed at my. complaint, with the words, "It's an absolute load of rubbish. I don't investigate rubbish. I can't be more. blunt or to the point than that.". It is useful to remember that the Met also treated Stephen Lawrences. parents with similar discourtesy; police prejudices are similar in my case, so I. can take some comfort from that case and hope that one day I will get a. fair hearing.

MI5 acted in bad faith, but they also acted with. arrogance. They do not care if I send 800 faxes every weekend, since they know I cannot. prove my claims, and the. recent Shayler case shows how weak external oversight is of the secret services. But they acted with more. than arrogance - the MI5 agents actually want my faxes to continue, they insist. that these faxes continue,. since my communications give them an excuse to continue their activities, and continue in the paid employ of the secret. service. Despite their use of diverse proxies over the. last ten years, it is the same MI5 officers behind the campaign all the time - I have seen one of them. on three. occasions in Canada over a period of years, and it is a safe belief that that same person continues to. be paid for his "work" in harassing me in London now. The average. cost of an MI5 employee is some 75,000 per annum, so. one may infer that their officers are amply compensated; their insistence. that "hostilities" are maintained is understandable when placed in this. light.

MI5 Persecution Update: Friday. 7 April, 2000

22,544 + 837. = 23,381

Last weekend I delivered another 837 faxes to. politicians and the media on the. subject of the security service conspiracy which has destroyed my life. This. brings the total in the last three years to at least 23,381. These totals. do not include partially delivered faxes.

Some of the. recipients of these faxes must know that what I say is true; and I hope to. motivate those people to acknowledge the reality of the harassment which has followed me for ten. years. It takes much time to transmit these articles, but as OCG MD. Simpson-Wells said to me in 1992, you have to be a good communicator if you are. to succeeed.

Harassment in. February 2000

Following a quiet period of almost five months, the persecution. resumed with a vengeance in late January/February 2000. At. this time I was at home in Clapham, London and was a relatively easy. target for the persecutors.. They have my house bugged, for audio and I believe video in some rooms. as well; so they can find out easily where I will be going on a particular day, and place people in that location to mouth words. of abuse at me. (I know the last sentence sounds. like classic paranoia, but it happens to be. true, and some of the people reading this know it to be true.)

On Friday 11 February 2000 I went shopping. in Croydon, to buy a watch at H. Samuels jewellers. in the Whitgift Centre. While I was there two youths came into the shop, one of them quietly. uttered an obscenity at me, and they immediately walked out. They showed no interest in. the shop.

That Sunday I. met with a friend in Clapham, who started needling me about "do you know anything about the CIA and FBI?".. Rather unsubtle, and worrying considering Ive known this guy for 20 years. From the words. and demeanour of this "friend". and others in February, I saw that the persecutors have again been trying to separate from me what. remains of my social. life.

Incidents in my Road. in February

MI5. very rarely place people in my home road to harass me, but such was their persecutory. fervour in February that they did so on three separate occasions. On the first such occasion, I. was met my two youths who, grinning, said a deeply offensive sexual obscenity at me - at which. I coughed at them, so they called me a "wanker".. This incident is safely recorded on minidisc-walkman, but. because of the offensive nature of their abuse. the recording will not be made public.

Another incident very early. in the morning of Sunday 20/Feb/2000 occurred outside my. home, following an evening in Croydon with some schoolfriends. Again. there were two youths - for some reason the persecutors always travel in twos or threes, very rarely is there. just one of them. - perhaps they need a group to bolster their courage, perhaps just one of them wouldnt have the guts to say. something unpleasant. One of the youths said quietly,. and bitterly, "shitty, very shitty".

Anyway, in. March there were no further incidents near my house in in my road, and our neighbours are very well disposed towards us,. so let us hope that. the current quiet continues.

Hello,

I wan't to by all available parts for the eb104 amplifier an so I wrote some
E-mails to cci.dayton@pobox.com. But I got no answer. Is the Company still
alive?

regards

Holger / DL9HDA

Well, yes, OM -- it is, after all, Christmas / New Years  and very
little gets done, or is done VERY slowly  in the workplace over here.
HI!HI!

I am looking for an inexpensive (hopefully $20 or less) analog meter

one with a moving needle like this
http://en.wikipedia.org/wiki/Image:VU_Meter.jpg

that I can plug my computer's sound card into (actually two meters, one for the right speaker, one for the left), that will read the pitch of the audio being played.

I know that a given sound has a fundamental tone and overtones, and it would have to detect the fundemantal tone (like a guitar tuner). The audio source would be a MIDI program, so if necessary I could use samples of a very simple waveform (ie Sine, square, etc) if that would eliminate overtones and make pitch detection more accurate.

Does anyone know if such a meter exists or where to find plans to build one?

Thanks.

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=
-= the BBC, television and. radio -=
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=
```

The first incident in June 1990 was when. a BBC newsreader made what seemed to be a reaction to something which had happened in my. home, and out of context. of what they were reading. My first reaction was disbelief; nothing of the sort had. ever happened before, the idea that such a thing could occur had not crossed. my mind, yet there was no doubt of what had just taken place. My disbelief eroded. as this recurred time after time. Besides the news, offenders included. shows such as Crimewatch (!), Newsnight, and "entertainment" shows. There seems to be very. little moral understanding among the people who make these programmes; they just. assume they will never be caught, so they carry on without. a thought for the illegality or amorality of what they do. The only time I ever. heard a word raised in doubt was by Paxman being. interviewed by someone else (I think by Clive Anderson). back in 1990; referring to the "watching" he said it troubled him, and when asked by the host. what you could do about it, replied "Well, you could just switch. it off" (meaning the surveillance monitor in the studio).. He clearly didn't let his doubts stand in the way of continued surreptitious. spying from his own or other people's shows, though.

Now you're convinced this is a troll, aren't you?. This story has been the subject. of much debate on the uk.* Usenet newsgroups for over a year, and some readers believe it. to be an invention (it has even been suggested that a group of psychology students. are responsible!), others think it symptomatic of a. derangement of the author, and a few give it credence. Quite a few people. do know part or all of the story already, so this text will fill in the gaps in their knowledge. For. the rest, what may persuade you of the third possibility is that some of the. incidents detailed are checkable against any archives of radio and TV. programmes that exist; that the incidents involve named people (even if. those hiding in the shadows have. not made their identity or affiliations evident), and those people may be persuaded to come out with the truth; and that. the campaign of harassment is continuing today both in the. UK and on the American continent, in a none-too-secret fashion; by. its nature the significant risk of. exposure increases with time.

On several occasions people. said to my face that harassment from the TV was happening. On the first day I worked in Oxford, I spent the evening. in the local pub with the. company's technical director Ian, and Phil, another employee. Ian made a few references to me and said to Phil,. as if in an aside, "Is he the bloke who's been on TV?" to. which Phil replied, "Yes, I think. so".

I made a number of efforts to find the bugs,. without success; last year we employed. professional counter-surveillance people to scan for bugs (see later) again. without result. In autumn 1990 I disposed of my TV and watched virtually no television for the. next three years. But harassment from TV stations has gone on for over. six years and continues to this day. This is something that many people. obviously know is happening; yet the TV staff have. the morality of paedophiles, that because they're getting away with it they feel no. wrong.

Other people who were involved in the abuse. in 1990 were DJs on BBC radio stations, notably disc jockeys from Radio 1 and other. stations (see the following section). Again, since they. don't have sense in the first place they can't be. expect to have the moral sense not to be part of criminal harassment.

PO: >Did you ever look for the bugs in your house ? If not, why not ? I. mean if
PO: >I thought that was happening. to me, I'd search the place from top to bottom,
PO: >I mean I live there I would know if anything. was out of place. If I was
PO: >really suspicious, I would call in one of those bug. detection teams which
PO: >have those machines that pick up the transmitted. radio waves. This
PO: >reminds me of. BUGS, that new programme on BBC1 on

That's exactly what we did. We went to a competent, professional. detective agency in London, paid them over 400 quid to debug our. house. They used scanner devices which go to over 1 GHz and would pick. up any nearby transmitter in that range, they also checked the. phones and found nothing... but if the tap was at the exchange,. then they wouldn't find anything, would. they?

CS: >Doesn't this suggest to you that. there are, in fact, no bugs to be found?

You can assume that they've done this sort. of thing to other people in more "serious" cases, where. they would know the targets would suspect the presence of electronic surveillance. So. they will have developed techniques and devices which are. not readily detectable either by visual inspection or by electronic means. What those techniques might be, I couldn't. guess.

In this case, the existence of. bugging devices was clear from the beginning, and they "rubbed it in" with what was said. by the boy on the coach. It was almost as if they. wanted counter-surveillance people to be called in, who they. knew would fail to detect the bugging devices, causing loss of credibility. to the other things I would have to say relating to the harassment.

I did all the things someone in my situation would do to try to. find the bugs.. In addition to calling in professional help using electronic counter-surveillance, I made a. close visual inspection of electrical equipment,. plus any points where audio or video surveillance devices might have been concealed. Of. course, I found nothing. Normal surveillance "mini-cameras" are quite noticeable and. require visible supporting circuitry. It seems to me the best. place to put a small video surveillance device would be additional to a piece of electronic equipment. such as a TV or video. It would be necessary. to physically break in to a property to fit such. a device.

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-

-= Capital Radio. - Chris Tarrant -=

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-

Capital Radio. DJs have been "in on it" from the start. One of the first things I heard in the summer of 1990 was from a Capital DJ who said,. "If he listens to Capital then he can't be all. bad" (supportive, you see. We're not bastards). Much of what came over the radio in 1990 is now. so far away the precise details have been obliterated by time.. No diary was kept of the details, and although archives if. they exist may give pointers, the ambiguity of. what broadcasters said would leave that open to re-interpretation.

In spring 1994, Chris Tarrant. on his Capital morning show made an aside to someone else in the. studio, about a person he didn't identify. He said, "You know this bloke? He. says we're trying to kill him. We should be done for attempted. manslaughter".

That mirrored something I had said. a day or two before. What Tarrant said was understood by the staff member. in the studio he was saying it to; they said, "Oh no,. don't say that" to Tarrant. If any archives exist of the morning show (probably unlikely) then it. could be found there; what he said was. so out of context that he would be very hard put to find an explanation. A couple of days later, someone at the site where I was working repeated. the remark although in a different way; they said there. had been people in a computer room when automatic. fire extinguishers went off and those people were "thinking of suing for. attempted manslaughter".

Finally, this isn't confined to the established radio stations. In. 1990 after I had listened to a pirate radio station in South. London for about half an hour, there was an. audible phone call in the background, followed by total silence for a few moments, then shrieks of. laughter. "So what are we supposed to say now? Deadly. torture? He's going to talk to us now, isn't he?", which meant that they. could hear what I would say in my room.

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=
-=. MI5: cost of the operation -=
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=

Here's what a couple of other people on. Usenet (uk.misc) had to say regarding the cost of. running such an operation...

PO: >Have some sense, grow up and smell reality. What you are. talking about
PO: >would take loads of planning, tens of thousands of pounds and. lots of
PO: >people involved in the planning, execution and. maintenance of it. You
PO: >must have. a very high opinion of yourself to think you are worth it.

PM: >But why? And why you? Do you realize. how much it would cost to keep
PM:. >one person under continuous surveillance for five years? Think about
PM: >all. the man/hours. Say they _just_ allocated a two man team and a
PM: >supervisor. OK., Supervisor's salary, say, #30,000. a year. Two men,
PM: >#20,000 a year each. But they'd need to work in shifts --. so it would
PM:. >be six men at #20,000 (which with on-costs would work out at more like
PM: >#30,000 to the. employer.)
PM:. >
PM: >So, we're talking #30,000 x. 6. #180,000. plus say, #40,000 for the
PM: >supervisor. #220,000. Then you've got the. hardware involved. And
PM: >any transcription that needs doing. You don't. think the 'Big Boss'
PM:. >would listen to hours and hours of tapes, do you.
PM:. >
PM:. >So, all in all, you couldn't actually do the job for much less than
PM: >a quarter million a year. Over five years. What are you doing that. makes
PM: >it worth. the while of the state to spend over one and a quarter million
PM: >on. you?

Those are pretty. much the sort of calculations that went through my head once I stopped to consider what. it must be costing them to run this operation.. The partial answer is, there have been periods when the intensity has. been greater, and times when little has happened. In fact, for much of. 1993 and the first half of 1994, very little happened. Although I don't think that was. for reasons of money - if they can tap into the taxpayer they're not going to. be short of resources, are they?

The more. complete answer is in the enormity of what they're doing. Relative to the cost. to British pride of seeing their country humiliated for the persecution of their own citizens, isn't is worth the cost of. four or five people to try to bring things to a close in. the manner they would wish? To the government a million or two is quite honestly. nothing - if they can convince. themselves of the necessity of what they're doing, resources will not be the limiting. factor.

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-
-= how. and why did it start? -=
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-

The. harassment didn't start by itself, so someone must have been there at the outset to give it a firm push and set the "animals" after me. It. looks as if I was set. up in June 1990, and the timing indicates someone from university was. responsible.

>One thing which has been missing from. this discussion is this simple
>prognosis: that maybe he. is right and that, despite his admitted
>mental condition, there really is a campaign against him. organised by
>now-influential ex-students of his. university.

In May or. June 1990, Alan Freeman on Radio 1 read out a letter from someone who had. known me for a few years, who wrote of the one who "wore out his welcome with random precision" (from the. Pink Floyd song). Freeman went on to say to the writer "that's. a hell of a letter you wrote there". The indication. is strongly that people I had parted from soon before nursed a grudge against me and were trying to cause trouble for. me.

The suggestion is. that Freeman might have shown the letter to other people, and things could have snowballed from there. Right. from the start the real source. (security services presumed) didn't announce themselves as the origin, but let the "talkers", the radio DJs, believe that. they were the originators. Think about it; if you announce,. "we're MI5 and we have a campaign against this bloke" then people. might not go along with it; but if you say, "everyone else is. getting at this bloke because he 'deserves' it" then people will join in. with fewer qualms.

>Why would "they" wish to. assassinate your character?

It's the classic case of hitting a cripple to prove you're stronger.. Why would the security. services expend hundreds of thousands of pounds and more than six years of manpower to try to kill. a British citizen? Because they are motivated by people who knew me at university. and feel personal animosity; because they knew me to be emotionally. weak, and it is in the nature of bullies to prey on those. known to be weak; and because they can rely on the complicity of the. establishment, which the security services manipulate and derive funding from. This. is England's biggest humiliation today, and the British security services are intent on preventing. their humiliation. becoming reality by continuing their campaign of attempted murder to suppress the truth from. becoming public.

-=-=-=-=-=-=-=-=-=-=-=-
-= who knows. about it? =-
-=-=-=-=-=-=-=-=-=-=-=-

Many people know, both in the. establishment and media, and among the general public. Despite an absence of its target from the. UK for more than two. years, the echoes of paranoia can still be heard loud and clear from across the water. When it started in 1990,. the only people who knew were those. in BBC television who were spying on my home, and a few radio broadcasters. There were a few cases of public harassment, but. very little compared to the situation that developed a. couple of years later.

The list today includes BBC TV staff (newsreaders such as. Martyn Lewis, Michael Buerk, Nicholas Witchell), people from radio stations. such as Chris Tarrant of Capital and. Radio 1 DJs, people in the print media, but also many people in the general public. All united. in a conspiracy which breaks the laws which the UK does have regarding. harassment, and all completely uncaring for any semblance of. decency or elementary respect for individual. rights.

The. British police (obviously) do know the nature of the harassment and in all probability the identity of those behind it.. Some time ago I made a complaint to my local police station in London, without. positive result. The UK police are failing in their duty to see the law enforced in. not checking. the abuse.

The article of which part is reproduced below was penned by. Bernard Levin for the. Features section of the Times on 21 September 1991. To my mind, it described the situation at the time and in particular. a recent meeting with a. friend, during which I for the first time admitted to someone other than my GP that I had been subjected to a conspiracy of harassment. over the previous year and a. half.

>There is a madman running. loose about London, called David Campbell; I have
>no reason to believe that he. is violent, but he should certainly be
>approached with caution.. You may know him by the curious glitter in his
>eyes and a persistent trembling of his hands; if. that does not suffice, you
>will find him attempting to thrust no fewer than. 48 books into your arms,
>all hardbacks, with a promise that, if you should return. to the same
>meeting-place next year, he will heave. another 80 at you.
>
>If, by now, the. police have arrived and are keeping a close watch on him,
>you may feel sufficiently emboldened to examine the. books. The jackets are
>a model of. uncluttered typography, elegantly and simply laid out; there is
>an unobtrusive colophon of a rising sun, probably not picked. at random.
>Gaining confidence - the. lunatic is smiling by now, and the policemen, who
>know about such things, have significantly removed their helmets. - you
>could do worse than take the jacket off. the first book in the pile. The
>only word possible to describe the binding. is sumptuous; real cloth in a
>glorious shade of dark green, with. the title and author in black and gold
>on. the spine.
>
>Look at it more closely; your eyes do not deceive you -. it truly does have
>real top-bands and tail-bands, in. yellow, and, for good measure, a silk
>marker ribbon in a lighter green. The paper is cream-wove. and acid-free,
>and. the book is sewn, not glued.
>
>Throughout the encounter, I should have. mentioned, our loony has been
>chattering away, although. what he is trying to say is almost impossible to
>understand; after a time,. however, he becomes sufficiently coherent to make
>clear that he. is trying to sell the books to you. Well, now, such quality
>in bookmaking today can only be for. collectors' limited editions at a
>fearsome. price - #30, #40, #50?
>

>No,. no, he says, the glitter more powerful than ever and the trembling of his hands rapidly spreading throughout his entire body; no,. no - the books are priced variously at #7, #8 or #9, with the. top price #12.
>
>At this, the policemen understandably put their helmets back on;. one of them draws his truncheon and the other can be heard. summoning reinforcements on his walkie-talkie. The madman bursts into tears,. and swears it. is all true.
>
>And. it is.
>
>David Campbell has acquired the entire rights to the whole. of the Everyman's Library, which died a lingering. and shameful death a decade or so ago, and he proposes to start it. all over again - 48 volumes this September and 80 more next year, in. editions I have described, at the prices specified. He proposes to launch his. amazing venture simultaneously in Britain and the United States, with. the massive firepower of Random Century at. his back in this country, and the dashing cavalry of Knopf across the water, and no one who loves literature and courage. will forbear to. cheer.

At the time this article. was written I had believed for some time that columnists in the Times and other journalists. had been making references to my situation. Nothing unusual about this you may think, plenty of. people have the same sort of ideas and obviously the papers aren't writing. about them,. so why should my beliefs not be as false as those of others?

What. makes this article so extraordinary is that three or four days immediately. preceding its publication, I had a meeting with a friend, during the course of which we discussed. the media persecution, and in particular that by Times columnists. It seemed to me,. reading the article by Levin. in Saturday�s paper, that he was describing in some detail his "artist�s impression" of that meeting. Most. telling are the final sentences, when he writes, "The madman bursts into. tears, and swears it is all true. And it is." Although I did. not "burst into tears" (he seems to be using a bit of poetic licence. and exaggerating) I did try hard to convince my friend that it was. all true; and I am able to concur with Mr Levin, because, of course, it. is.

At the beginning of the piece Levin reveals a fear of being attacked. by the "irrational" subject of his story, saying. "I have no reason to believe that he is violent,. but he should certainly be approached with caution". This goes back to the xenophobic propaganda. of "defence" against a "threat" which was seen at the very beginning of the harassment. The. impression of a "madman running loose" who needs to. be controlled through an agency which assigns to itself the. mantle of the "police" is also one which had been expressed. elsewhere.

In the. final paragraph of this extract, his reference to Everyman�s Library as. having "died a lingering and shameful death a decade or so ago" shows clearly what sort of conclusion they wish to their campaign. They. want a permanent solution, and as. they are prevented from achieving that solution directly, they waste. significant resources on methods which have been repeatedly shown. to be ineffective for such a purpose.

-=-

-=. why won't the British police do their job and put a stop to it? -=

-=-

The. British police obviously do know what is taking place. Besides my interpretations of what individual. officers have said which forces that conclusion, it would be. inconceivable for them to be unaware of something on this. scale.

If they know, then they will know that the. abusers have broken laws in the UK and abroad. Recently the UK. introduced laws against electronic spying which carry a penalty of several years jail if. caught. If the police know illegal harassment. is taking place, and do nothing about it, then they are failing in. their responsibilities.

Last Easter (1995) I went into the. local police station in London and spoke to an officer about. the harassment against me. But I couldn't provide tangible. evidence; what people said, in many cases years ago, is beyond proof, and without something to support my statements I cannot. expect a police officer to take the complaint. seriously.

The current situation with regard to the police is not. one which allows a breakthrough in dealing with the. problem. On the one hand, most individual officers at a local police station may. not know about the ongoing assaults, so a complaint at that level will not yield results.. Yet the police as an organisation do know of the harassment, and they must. be aware that a complaint has been made at a police station. So it. is clearly their duty to take preventative action. against the continuing molestation, but because the criminals are operating on. behalf of a state agency, the police are not carrying. out their duty.

-=-
-= abuse in set-up situations and in. public -=
-=-

Strangers in the street. have recognized me on sight many times, and shown awareness. of the current thread of abuse. To give you one example, in 1992 I was seriously ill, and a manager at work somewhat. humorously said that "it wasn't. fair" that people were bullying me. A few days later, I attended for the first time a clinic in London as an outpatient,. and on my way out was accosted by someone. who asked if "they had paid my fare", with emphasis on the. word "fare". He repeated the word several times in this different context; that they should have paid my "fare", each time. emphasizing the word.

For two and a half years from the time their harassment started. until November. 1992 I refused to see a psychiatrist, because I reasoned that I was not. ill of my own action or fault, but through the stress caused by harassment, and that. a lessening of the illness would have to be consequent to a removal of its immediate cause, in other words a cessation. of harassment. I also reasoned that. since they were taunting me with jokes about mental illness, if I were. to seek treatment then the abusers would think that they had "won" and been proved "right". Remember,. the constant theme of any persecution is, "we must destroy you because. you're X", whether X is. a racial or other attribute. In this case the X was "we persecute. you because you have brain disease". The similarity of this logic to Nazi attitudes. to the mentally ill is striking.

The same. manager who'd said "it wasn't fair" asked me in winter 1992 why I didn't seek help from a. psychiatrist; was it, he asked, because "they would think they. had won" if I sought treatment? That was something I'd never said at work... again, taken separately it proves. nothing, but many such things over. a period of months proves conclusively that people in the company knew what was going on, and in quite. a lot of detail.

Usually harassment. in public lacks the level of finesse of "paying your fare". Most people's imagination does. not go beyond moronic parroting of the. current term of denigration. That is not surprising given the average level of the abusers; if they do not have. the intelligence to distinguish wrong from right then neither will they have the. capacity for anything other. than mindless repetition of a monosyllabic term calculated to fit into their. minds.

The first incidents of verbal assault. in public were in again in the summer of 1990, although they increased in frequency and venom with. time. In July 1990 the first public incident occurred on. a tube train on the Northern line. Two men and their girlfriends recognised me; the women sprang to. my defence,. saying "He looks perfectly normal, he doesn't look ill". Their boyfriends of course knew better, and followed the party line;. one of them made reference to. an "operation", apparently to work at the tube station but implicitly to a visit that I had. made to hospital a couple of weeks previously.

In August 1990 going home from college, soon after getting on. a tube train at Gloucester Road I was followed. by a group of four youths, who started a chant of abuse. That they were targeting me was confirmed by. other people in the carriage, one of whom asked the. other "who are they going on at, is it the bloke who just got on?" to which the second replied "yes,. I think so". I was tempted to reply, but as. in every other instance the abusers are enabled. in their cowardice by physically outnumbering the abused; any confrontation would result in my being beaten up, followed by. a complaint to the police that "he. attacked us", and of course he's ill, so he must have been imagining that we were getting at him. Shitty,. aren't they?

But the shittiness of the four youths on the tube train is. as nothing compared to the episode on the National Express. coach to Dover in the summer of 1992.. While going on holiday to the Continent I was verbally set upon by a couple. travelling sitting a few rows behind. The boy did the talking, his female companion contributing only a continuous. empty giggling noise. He spoke loudly to ensure other people. on the coach heard, always about "they" and "this bloke". but never naming either the abusers or the person he was talking about. He. said "they" had "found somebody from his school, and he was always really stressed. at school". They must have dug deep to find enemies there; perhaps someone who dropped. out of school, someone who didn't do too well later, who was jealous and. keen to get their own back? The boy also said "he was in. a bed and breakfast for only one night and they got him".. By a not unexpected coincidence I had been in a B&B in Oxford a week previously, which had been booked from work;. other things lead me to the conclusion that the company's. offices were bugged for most of the 2 1/2 years. that I was there, so "they" would have known a room in the. B&B had been booked. (But I'll bet "they" didn't tell the company's managers their offices were. bugged, did they?).

After a few minutes of this I went back. to where they were sitting and asked where. they were travelling. The boy named a village in France, and the. girl's giggling suddenly ceased; presumably it permeated to her brain cell what the purpose of the boy's abuse. was.

This and other set-up situations are obviously calculated to. provoke a direct confrontation. which would bring in the police, with the abusers claiming that they were the. ones attacked. Again in 1992, outside the house where I was living in Oxford I was physically. attacked by someone - not punched, just grabbed by the coat, with some verbals. thrown in for good measure. That was something the people at work. shouldn't have known about... but. soon after a couple of people were talking right in front of me about, "I heard he was attacked". The. UK police have a responsibility for preventing assault occurring, but they do not seem. to take any interest in meeting that responsibility.. I suppose their attitude is that harassment does not come within their remit unless it involves physical assault,. and they will only become involved once that happens. That is of course. quite the wrong attitude for them to take, but. as I now understand, the police investigate only the crime they wish to investigate; if they. do not take your complaints seriously then there is nothing you can do to. make them take. action.

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=
-= purpose in publicizing it; censorship. in uk.* newsgroups -=
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=
```

The postings to uk.misc newsgroup generated a very. defensive reaction from Usenet readers in the UK.. So much so, that they tried strenuously to suppress what was being said, both by breaking the rules. of netiquette in their responses on. the forum, and directly by action to revoke the account from which the. postings were issued.

Yet the postings were within the normal. boundaries of behaviour for uk.misc, and other less. partisan spectators did not see justice in the censorship which was. effected, as the following excerpt shows;

:Karen Lofstrom. (lofstrom@lava.net) wrote
:>It does seem that the frequency and the size. of his posts are
:>approaching net. abuse. However, IMHO, they aren't quite there yet. If
:>his postmaster were to act in this. instance, it would raise troubling
:>censorship. issues.

The inescapable conclusion. of the censorship effected on the uk.* newsgroups is that the British are. intent on their wrongdoing remaining concealed,. and therefore seek to subvert and suppress freedom of speech, not only in their. own country where the media shows xenophobic bias and bile against all perceived enemies. within and without, but also in other countries which have their own statutes to guarantee the. basic human right of. free speech.

It is absolutely necessary. to bring their hate campaign out into the open where it can be placed under scrutiny and the harassers seen for. what they are.. That is the only way of making it impossible for the security services to carry it out. There is a wider. dimension, though. Xenophobia as demonstrated by British people and institutions over the last few. years belongs to the same stable as racial hatred. In. one case, two youths on a Tube train made that racism explicit by referring to their. victim as a "soft. toy, not up to British Standards". Doubtless others victimize partly on the. basis of race (isn�t it odd that they chose to torment someone who is not ethnically English?) while. expressing their abuse in terms of another genetic attribute, namely mental illness.. All xenophobia on a genetic basis is wrong, but while racial insults are. illegal, abusing the mentally ill is neither against the law nor subject. to similar condemnation when it is. exposed.

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-
-= my response to the harassment. -=
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-

My first reaction in. 1990/91 was to assume that if I broke contact then they would not be able to follow and would lose interest. So. I did the things that have been. suggested by other people; I sold my television, stopped listening to the radio and tried to withdraw away. from the sources of abuse as much as possible.. I reasoned that they must have more important things to. deal with and that normal people would simply leave me alone if it were made difficult for them. to continue their harassment.

I reckoned without the sheer vindictiveness of. the abusers. They did not let. up but instead "got to" people around me, mainly people at work, to do their dirty work for them. I went to see my GP, who refused to believe. what he was being told, and. refused to direct me on to anyone who could be of practical assistance.. It was not until three years had passed that the GP admitted the matter was outside his competence and. suggested going to the police.

In the summer of 1994. we called in counter-surveillance experts from a private detective agency. to sweep our house and telephone for bugging devices. They conducted a thorough search and found nothing; but. as noted above, since the existence of surveillance was. being forced in my face by the harassers, you would expect them to have. taken the possibility of a counter-surveillance sweep into account. when planning the type of devices to be. employed.

In Easter 1995 I made. a complaint to my local Police station in London, but the police have. not expressed any intention to do anything about the continuing harassment ("we're not saying. it's happening and we're not saying it isn't happening" were the. words used). I think the officer I spoke to at. Easter wasn't aware of it happening, although other members of the police. force obviously do know.

From April. 1995 until the present time the matter has been discussed in a lot of detail on the Usenet (Internet) "uk.misc" newsgroup. That. discussion has given birth to the article which you. are now reading. My hopes in posting to Usenet were. that wider publicizing would discourage the security services from continuing. their harassment, and "draw people out" into concurring with the truth of what was being said. Neither. of those have followed, but the. discussion has served a purpose in allowing this structured report to be. created.

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=
-=. MI5: methods and tactics -=
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=

They deliberately set out to harass in a way. that would resemble the symptoms of schizophrenia, so that any report of. the harassment would be taken as indicating. mental illness and "treated" accordingly. They never show their own faces; they only work through. proxies, in the media, among the public, and by manipulating people in the workplace.. Since they do not declare their identity there. is no evidence to initiate legal action against the security services or anyone else.. The only people you can prosecute are the. proxies and they will deny knowledge of any conspiracy.

By repeatedly humiliating and abusing the. victim, they induced mental illness. This is the worst. form of human rights violation: making any statement of. the harassment appear to be symptomatic of the illness which they cause through the. harassment. That this can happen, and people collude by. silence, is absolutely horrifying.

From the beginning in June 1990 they set a. pattern of harassment which they have followed without. change for the last six years. They paint me as a "threat" to which people. must "react" (shades of Nazi persecution methods), while simultaneously. portraying their hate campaign on which they have spent over a million. pounds of taxpayers� money as a "joke".

The. MI5 that breaks the law with the silent complicity of the police is the same agency that is. now seeking a role in the fight against crime. Perhaps the real joke is the proposed involvement in the. implementation of justice of an. organisation which commits criminal acts with secrecy and disinterest for. the legal process.

Phase-lock loops like 74HC4046 can lock onto an audio
frequency, and the follower in it has an output voltage
proportional to frequency.  That's about $0.60 from your budget;
a good analog moving-needle meter will suck up the rest of it.

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=
-= MI5: methods and. tactics -=
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=

They deliberately set out to harass in. a way that would resemble the symptoms of schizophrenia, so that any report of the. harassment would be taken as indicating. mental illness and "treated" accordingly. They never show their. own faces; they only work through proxies, in the media, among the public, and by manipulating people in the workplace. Since they. do not declare their identity there is no evidence to. initiate legal action against. the security services or anyone else. The only people you can prosecute are the proxies and they will deny knowledge. of any conspiracy.

By repeatedly humiliating and. abusing the victim, they induced mental illness. This is the worst form of human rights violation: making. any statement of the harassment appear to. be symptomatic of the illness which they cause through the harassment. That this can. happen, and people collude by silence, is. absolutely horrifying.

From the beginning. in June 1990 they set a pattern of harassment which they have. followed without change for the last six years. They paint me as a "threat" to which people. must "react" (shades of Nazi persecution methods), while simultaneously portraying their hate campaign on. which they have spent over a million. pounds of taxpayers� money as a "joke".

The. MI5 that breaks the law with the silent complicity of the police is the same agency that is now seeking a role in. the fight against crime. Perhaps the real joke is the proposed involvement in the. implementation of justice of an organisation which commits criminal acts with secrecy and. disinterest for. the legal process.

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=
-= why. the security services? -=
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=
```

You may ask,. why do I think the "they" referred to are the security services? Is there any evidence that there is. a single source, as opposed to a loosely based "whispering. campaign" amongst many people? Even if there is a single source, is there any evidence that "they". are professional "buggers" as opposed. to amateurs, or perhaps people working for a privately funded. organization?

a) As to the question of a single source. versus something more fragmented; it is quite obvious that there is a single source. from the way the campaign has been carried. out. Since things have been repeated verbatim which were said in my home, there. must be one group which does the watching and listening. Since. on several occasions (mainly during travel) people have been planted. in close proximity and rehearsed in what they were to say, it follows that someone. must have done the planning for that, and again a single source is. indicated.

b) So why couldn't it be amateurs? Why couldn't. it be a private organisation, for example a private detective agency paid. to manage the campaign and undertake the. technical aspects? Some detective agencies are unscrupulous as has been proved on the occasions. in the past when they've been exposed or caught; they. too can have access to the bugging technology deployed; and there are reported cases. of MI5 paying private eyes to do their dirty work (against peace campaigners and. similar enemies of the state) on the understanding that if they were caught then they could. deny all knowledge. Why. couldn't that be the case?

The main. factor pointing to direct security service involvement (as opposed to amateurs or MI5 proxies). is the breadth of their access to the media in particular, and the fact that the television companies are. so involved in the campaign. The. BBC would not directly invade someone's home themselves, since it would not be within. their remit to allocate personnel or financial resources to do so. An organisation of their stature would not. take part in a campaign set up by private sources. The. only people they would take material. from would be the security services, presumably on the assumption that if. the cat ever flew out of the bag yowling it would be MI5 who would take. the consequences.

State. sponsorship for these acts of psychological terrorism is also indicated by duration; support for over. six years for a team of three or four people would be beyond the. means and will of most private sources. The viciousness of the slanders and personal denigration also. points to MI5; they traditionally "protect". the British state from politicians of the wrong hue by character assassination, and in this case. are using their tried and. tested methods to murder with words an enemy they have invented for. themselves.

And there are precedents.. Diana and Hewitt were alleged to have been filmed "at it" by an Army intelligence team which had. operated in Northern Ireland, these allegations were made by someone called Jones. who had been on. the team. His statements were denied by the defence establishment who tried to character-assassinate by. describing him as the "Jones twins". Funny how if. you tell the truth, then you must be ill, isn't it? Thought only communists. behaved like that?

Hewitt later said that he'd been. spoken to by someone in the army who revealed the existence of videotapes of him and. Diana, and that the tapes would be published if any. attempt was made by them to resume their association.

-=-=-=-=-=-=-=-=-=-=-=-=-=
-= harassment at. work -=
-=-=-=-=-=-=-=-=-=-=-=-=-=

Once I stopped watching television and listening to the. radio at the end of 1990, "they" had to find other ways of. committing abuses. So they took what must. be for them a tried and tested route; they get at you by subversion of those around you. Since they wouldn't be able to do that with my. family or friends, that meant getting at people in the workplace to be. their mouthpieces. and do their dirty work for them.

They supplied my employers in Oxford with details from what was. going on in my. private life, and what I and other people had said at my home and accommodation in Oxford. So people at. work repeated verbatim words which had been said. in my home, and repeated what I'd been doing recently. Often the most trivial things, the ones from your domestic life,. are the ones which hurt most. One manager in particular at Oxford continuously. abused me for ten months with verbal sexual abuse, swearing, and. threats to terminate my. employment. After ten months I was forced to seek psychiatric help and start taking medication, and was away from work for two. months. I spoke later with a solicitor about what had happened at that company;. he advised it. was only possible to take action if you had left the company as a result of harassment, and such an action would have to. be started very soon after leaving.

Over a year later. the same manager picked on another new worker, with even more serious results;. that employee tried to commit suicide with an overdose as a result of the ill-treatment, and was forced to leave. his job. But he didn't take action against the company, either.. Abuse at work is comparable to that elsewhere in that. tangible evidence is difficult to produce, and the. abusers will always have their denials ready when challenged. And even if a court accepts what you say happened, it. still remains to prove. that abuse causes the type of breakdown I had at the end of 1992. In a recent case before a British court,. a former member of the Army brought a case against others who had. maltreated him ten years previously. Although the court accepted. that abuse had occurred, it did not agree that depressive illness necessarily followed,. and denied justice to the. plaintiff.

You can buy digital (yes, I know you said you wanted analog) autotuners --
such as those from Sabine -- for around $30.

I agree. If the toroid is getting that hot. ie too hot to hold your finger
on it, then the core is under sized. A re-design is called for.

If you're not skilled in electronics, you're wasting your time. Buy a
commercial unit and be done with it.

Thanks for your reply. I am not skilled in electronics - do you know
of any schematics I could follow to build one of these?

I would like to build an analog volume meter (moving needle type)
using moving needle gauges like this
    http://en.wikipedia.org/wiki/Image:VU_Meter.jpg
scavenged from a dead mixer's VU meter.

It would plug into the headphone jack on a set of computer speakers and monitor the right/left sound volumes independently.

Can anyone point me to a good website or book with schematics or plans on building this?

PS I would also be interested in building a frequency meter (also would be plugged into computer speakers and display the pitch/frequency of a pure sin wave coming from the computer's sound card). I got several replies but they were pretty technical and I have not found any complete plans for such a device. If any can suggest a good web site or book that would be great. Thanks

>BobG:
That's a tachometer. A lo pass filter, a comparator, a oneshot, a capacitor, and a meter on a trimpot. Every zero crossing, the comparator fires the oneshot, the cap integrates the pulses, and the meter shows the freq. Cal it with sine waves.... no harmonics.

linnix:
Or a $2 micro averaging the DCT, FFT or XYZ (forgot the name of that spectral analyser).

whit3rd:
Phase-lock loops like 74HC4046 can lock onto an audio frequency, and the follower in it has an output voltage proportional to frequency. That's about $0.60 from your budget; a good analog moving-needle meter will suck up the rest of it.

Why do you need this, or think you need this? It might look nice, but will
it tell you what you need to know?

Go to a music store (one that sells musical instruments) and ask for a tuning
meter. Korg is a brand many stores carry.

It is a pretty simple circuit, but it greatly depends on exactly
what your meters are. Get youself a couple of meters first,
and then come back and ask specifically for how to hook
them up. It would be very helpful to know what they came
out of, and for bonus points, the circuit diagram of where
they came from.

Forget it. It is neither practical nor particularly useful.
Unless you can give us a good explanation of what you
think you want to do with it, nobody can help you.

Maybe. What do you want to do with it?
Can't answer it as a generic question. It
seems absurd to even think about a "meter"
for frequency when listening to most any
kind of normal audio.

And if you really need an actual VU meter, you won't find it on too many
consoles being scavenged these days, sad to say.

In fairness to the original poster... Once upon a time you could buy Heath or Knight or EICO or other electronics kits, to save money, learn about electronics, or just have fun. Most currently available kits don't do much useful and are overpriced.

Lots (mostly digital with faux analog displays) to pick from for
between $10 and $20. I just bought this one at a local music store for
$15 or so, batteries included.

http://www.amazon.com/KORG-GA30-Guitar-Bass-Tuner/dp/B000EB68VK/ref=pd_bbs_sr_8?

How about LED bar-graph VU meter?  Fairly easy to make, using these:

http://www.national.com/mpf/LM/LM3915.html

or

http://www.national.com/mpf/LM/LM3916.html

Check the full datasheet for example circuits.

I believe I published a design for a buffered VU meter somewhere around 1993 in Audio Amateur magazine, which is now known as audioXpress. It's really very simple; for an unbalanced line (like the headphone jack) all you need is an opamp (half of a TL072 works fine), a couple of resistors, and a pot to adjust the calibration. Connect the output of the opamp to the VU meter through a 3.62k resistor and you're home free (okay, you need something to power the opamp like a cheap balanced power supply or a couple of 9V batteries). If you have a real VU meter, there you are.

Of course, we don't know if your "VU" meter is a real VU meter, which has certain defined ballistics that are specified in ANSI technical standards. Can you tell us from what broken mixer you scavenged the meter?

Probably the easiest way to do that is not to build it. Instead, go buy a digital voltmeter (DVM) which has a frequency scale on it.

Peace,
Paul

For small displays, LED is difficult to have fine resolutions.

Color backlite LCD is a much better option.

For example:

http://linnix.com/lcd-meter.jpg

is a color LCD display for one of our customer.

You can drive it with an LCD uC running a Goertzel filter on the
selected frequency.  uC + LCD for $5  in volume.

If you have a computer anyway, how about using the sound input and run
one of the numerous spectrum analyser programs on it?

There's no need to "detect" the fundamental. The device would simply look for zero crossings, which are the same regardless of the presence or absence of harmonics.

In fact, I'm reasonably (but not completely) sure a PLL would work with a non-sine signal.

Comes only vaguely close to meeting VU ballistics specs, which can be
very annoying at times.  Fine for rough work, though.

Vellemann makes some inexpensive LED meter kids.

That need not be true. If you have a large high harmonic, you can
have two zero crossings where one is expected. Only a little
cleverness is needed to fix the problem.

> In fact, I'm reasonably (but not completely) sure a PLL would work with a
> non-sine signal.

They do but you need to make sure that they sweep up to the frequency
they are going to lock onto. Most PLL designs will happily lock onto
a harmonic.

If the OP is determined to build something to use his analog meters, I suggest the project at http://sound.westhost.com/project55.htm. Seems to be a reasonable circuit and gives a decent description as well.

A way to test hot melt glue would be to place a small piece on a paper
plate in the microwave oven, along with a cup of coffee to the side (as
a dummy load to keep the oven happy).  See if it gets warm.
>>
>>Has anyone attempted to use good old fashioned hot melt glue as an

A double boiler set up may be better for that.

>>
>>Both of these options seem significantly less expensive than standard
>>epoxy potting compound...

I suppose an advantage of hot melt glue is that you could de-encapsulate
stuff easier if you ever needed to.

Kenwood used something like that in the TS440SAT transceiver, on the VCO
if I recall correctly. Seems the stuff would sometimes corrode some of
the circuitry after several years.

Probably because of a similar reason that toys have lead. Customs
agents too busy looking for drugs and such to worry about some paperwork

issue... And years ago I heard an FCC guy say that they frequently see
bogus FCC certification file numbers on stuff.

My humble apologies. I thought I was reading the same question that he
asked a few days ago when he wanted to use an analog VU meter to
display pitch. I see that here he's looking to display level.
Different question, different answer, and this one has an easier

answer.

This is fine, but what about the accuracy and resolution of the analog meter used to read the output?

It still isn't clear why the OP is insisting on an analog display.

Since when has that stopped real homebrewers? Ahh, I see a slew of cross-posted groups (reading from r.r.a.h)

Don't get me wrong. I am working on a couple of projects
that could use circuits like that, but they are simply not
produciton-worthy anymore. :-(

If memory serves, there are a couple of "exemptions" which might be what these units are using.

================

If the Effective Radiated Power is below a certain power level, then no FCC certification is required.

There is also, I think, certain frequency ranges which allow slightly higher power but still does not need FCC certification.

Posting-Frequency: posted monthly
URL: http://www.faqs.org/faqs/radio/personal-intro/

Changes followed by "|".

The rec.radio.info newsgroup, first established in 1993, has been recently revived by an active moderation team. We are currently seeking suitable information, FAQ, and bulletin articles from the entire rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our newsgroup.

We are seeking a replacement maintainer for the following information bulletin formerly posted to rec.radio.amateur.* (and currently archived at http://www.faqs.org/faqs/radio/personal-intro/):

radio/personal-intro
Subject: Guide to the rec.radio Newsgroups
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 9 Nov 2001 06:18:17 GMT

Posting-Frequency: 15th of each month

We are willing to provide any technical support necessary to get this article updated and automatically posted again at a regular interval. This would include establishing contact with the original maintainer for any necessary permissions. We would prefer to seek a new, dedicated maintainer at this time, rather than start auto-posting the original article ourselves.

For more information about our newsgroup, see:

http://www.panix.com/~rram/usenet/rri/index.html

Please direct any comments, questions, or criticisms to
rec-radio-info-request@panix.com.

Thanks to everyone for your replies. I just want to do analog metering
with moving needle meters. I am aware that to meter volume/frequency
digitally, I can buy a mixer or tuner, or via computer with the
appropriate software. The meters in question are from an old Radio
Shack mixer (I'll have to find the model #, left it at home). No
matter what the exact specs of the meters however, the basics of the
circuit for metering volume or pitch/frequency should be the same.
Thanks again.

MS-

I once had an automotive tachometer that hooked between the engine's points and ground, and was calibrated in RPM. I do not recall, but there may have been separate scales for 6 and 8 cylinders.

I don't think it had any active components, and didn't require an external power supply. It was measuring frequency by clipping, differentiating the waveform and reading the integral of the pulse on a sensitive meter movement. It was calibrated from a 60 Hz sine wave.

You may find something similar (or one with active circuits) if you search for analog tachometer circuit on the web. If you have an old automotive tachometer, just trace out its circuit.

Using it for higher audio frequencies should be a matter of calibration.

Fred

As far that I remember, there exist some mutual agreements concerning
putting on the market CE-marked equipment in the US and vice versa.

> This is OT to r.r.a.h. in that it is often useful to get the

There are no central database for CE marked equipment. The doc rests at the
manufacturer and/or the entity putting the equipment on the market.

The Mad Scientist still hasn't told us his application. Something like that could work if he wanted to measure a stable frequency but it would be of no use if he wanted to play music into it and have it dance to the notes. '

There is no point to this discussion. If he doesn't want a frequency meter for a single, continuous tone, he's barking up the wrong tree. His meter won't provide a useful display no matter what.

If you differentiate the signal enough for the range of 20-20KHz,
you end up with an indication indistinguishable from "volume"!  :-)
The request is fundamentally absurd.

At the surface of a perfect conductor, the electric field must be perpendicular to that surface. To the extent that ground is a good conductor, the electric field will be predominantly perpendicular to the surface of the ground. That is true of signals as well as noise. If you sense the electric field within a fairly small fraction of a wavelength of good ground, expect it to be mainly vertical.

Perhaps a more interesting thing is that commonly the noise from appliances and the like in the near field has an electric field component that's much larger than the magnetic field component: that is, the ratio of the two is much higher than it is in an electromagnetic wave. In that case, you can reject such local (near-field) noise by using a receiving antenna that is not sensitive to the electric field--for example, with a balanced small loop. Since you need to be in the near field for this to give much benefit, in a practical sense you probably won't get much benefit above perhaps 5MHz. But balanced loops (which are relatively insensitive to electric fields) are useful at 160 meters, the AM medium-wave broadcast band, and VLF/LF.

Cheers,
Tom

Hot melt glue has a basic problem - it melts when it gets hot. It forever limits where the stuff can go. They must be kept out of a hot car, and the components cannot get hot.

I have used epoxy before and it works fine for all sorts of potting projects. You can color it or get it clear. Rf properties are good.

Remember, however, that when you encapsulate something, you trap the heat inside - so the temperature rise of the encapsulated components is greater than free air.

The advantage of hot melt glue is it hardens quickly and even if it leaks out of your mold, will stop when cool. On the other hand, 2 part epoxy potting compound when mixed is about as thin as water and will stay that way for a couple of hours. It will leak from even the smallest crack or hole.

We use the 2-part epoxy potting compound in custom milled enclosures for motorcycle control units. The enclosure has two connectors that have to be sealed in with RTV before the potting compound is added.

This also occurs to me while thinking about our past potting runs. The hot melt glue will NOT fill all the voids in your unit. Air bubbles will be trapped and will not be able to get out. The epoxy we use takes 24 hours to harden at room temp and this allows time for air bubbles to escape. We have to add more epoxy to each unit for the first 10-15 minutes as air escapes.

Hope this helps a little.

Paul, KD7HB

One other concern a few people expressed when I was looking for
"alternative" potting compounds- Most epoxies,etc. contract a bit when
they harden/cure. This can (and apparently has,in instances?) "sheared"
components from the PCB's they were soldered to.

The device might work fine,ya pot it,and it works fine..than the epoxy cures,and it doesn't work anymore because of 'sheared' leads,and cracked solder joints.
Just something to be aware of.

Other than appearance, is there a downside to trapped air bubbles?

Hot melt ,when fluid, might have too high a temperature for the components
to be encapsulated.

Some "pro" potting compounds are 2-part RTV rubber. This presumably has
a bit more "give" than a rigid epoxy & is less likely to rip parts off a
board. Another thing to watch out for with two-part materials is that
the ones that aren't designed for potting can get very hot when they
cure. That's one reason you want a very slow curing cycle.

A long time ago I potted a bunch of satellite circuitry in an epoxy
filled with hollow glass microspheres to make it light. The thermal
conductivity was terrible, so you had to be careful to heat sink
anything that might get warm.

Watch out for resins or epoxy. There are big stains put on the parts
when it sets, and again over temperature changes. I've tried it, and had
parts break in two inside the resin. The potting has to have some give.

Im suprised nobody has bothered to ask this....

What is the potting being used for? Moisture, vibration, HV isolation ??

Depending on the use, the 'good enough' alternative might vary considerably.

Greetings:

Why are some imported (to the U.S.) intentional radiators (such as RC toys, fitness heart-rate monitors, etc.) not FCC EMC Part 15 certified (there is no FCC OET record on file)? These have CE EMC Certification and a CE 'number'; is there a treaty that exempts such devices from further FCC certification? Is there a publicly accessible database of CE 'numbers' similar to the FCC OET filings? I have found nothing of use on the 'net in these matters?

This is OT to r.r.a.h. in that it is often useful to get the schematic of an intentional radiator from the FCC filings or at least find freq. and emissions info about it when using parts from such a device in a homebrew project. I would like to do the same with CE certified devices and also learn why so much foreign-made stuff isn't in the FCC database.

Regards,

Michael

-----BEGIN PGP SIGNED MESSAGE-----
Hash: SHA1

As I understand the description of the kit the Tuner allows you to tune
the antenna to the best SWR when attached to the ATU/SWR meter, but if
just attached to the antenna it will declare the antenna resonant freq
(in morse code). Is this correct - that it will give the resonant freq
of the antenna?

Thanks,
--

SolderSmoke #72

December 19, 2007
M0HBR's Bollywood debut.
Alien hams.
Blackboxophobia.
Solar power (in Rome and on Mars).
TechShop.
South Pole IT.
Mixer madness.
The Radio Club of America.
200 Meters Index.
Peter Dahl.
MAILBAG: Al on audio quality,
WB2REW on Yogi Berra,
W9ILF's tube type mp3 amp,
G8SEQ's bad case of "The Knack",
N8XMS's "Curiosity Curse."

Tired of listening to the Alicia Keys or the BBC on your I-Pod?
Wouldn't you like to be able to carry with
you the kinds of ham radio conversations that you
listen to while in your radio shack? Tune in to SolderSmoke!

RSS FEED: You can subscribe to the program, have
them downloaded to your MP-3 player, and listen to
them at your convenience. To subscribe, just cut and
paste this URL into your I-poder (or similar)
software.
http://www.soldersmoke.com/soldersmoke.rss

If you don't have an MP3 player you can just go to the
site below and listen to the latest program (and
earlier editions) using the audio software on your
computer.

http://www.soldersmoke.com

All the programs are available here.

I hope you enjoy the program. Please send us feedback.

>(in morse code). Is this correct - that it will give the resonant freq
>of the antenna?

If you're referring to the KD1JV 'Tenna Dipper kit offered through the Four States QRP club, then as I read it, it's basically a tunable signal generator (with a morse-code readout) and an SWR analysis bridge of the simple "the LED goes out when the bridge seens a near-to-50-ohm load" variety. It's a very simple version (a subset) of what you'd find in an MFJ or Autek or similar antenna analyzer.

You can hook it directly to an antenna, set the operating frequency (using the switches, dial, and the morse readout), and then tweak the antenna until the LED goes out... at which point your antenna is tuned.

Alternatively, you can hook it to an antenna, select the band, rotate the knob until the LED goes out, and then use the morse readout to determine the frequency at which the good match has been found.

Or, you can hook it to the "transceiver" side of an antenna tuner/transmatch, select the frequency, and then adjust the ATU until the LED goes out.

In any case, if you can't get the LED to go out, then you don't have a good match. You won't necessarily know why, or by how much the antenna is out of tune for the desired band.

Looks like a fun little kit... quite a bit of functionality in a small package for a small price. Combine it with a Norcal BLT or similar QRP transmatch, maybe?

Hello,
The panel meter (plate voltage 0-3Kv) of my Linear amplifier fl-2100Z is broken.
Do you know or can find spare parts.
Or you know the characteristic electric of the panel meter ?
Thanks
Max

Yes, that's what I was hoping to do.  Thanks for the confirmation.

Epoxy, as described by others, tends to stress the components - one notable job I had was the vco in a Yaesu FT480R - took AGES to chip away with a fine wood chisel after using a blowtorch to open up the brass enclosure.....one of those "personal challenge" jobs.

I use good old fashioned beeswax. Good rf properties, easy to use, easy to dig out if needed. Bugger all mechanical strength, but ideal for vibration damping ie oscillators etc. Repotted the Yaesu VCO, no reported problems after 3 years....

Andrew VK3BFA.

We often see requests for analog meters, which are fragile and hard to come by, to say nothing of expensive. If the objective is to refurbish a vintage amplifier, then probably the best bet is to find a junk amp to cannabalize for parts.

But if the objective is to actually -use- the amp, then a micro and an LCD, along with a little design work, can lead to a meter that is more accurate, more robust, and cheaper than the original.

Hi,
Thank you for your answer.
The digital LCD is another solution, but I wanted to keep the spirit of the
old amplifier.
However, I don't know the value of galvanometer, it is not indicated in the
diagram of the manual, It is written only M1.
Regards
Max

There was a time when the value of the meter was printed on the paper that holds the scale, like down in the corner. It may nor may not be visible without front cover on.

I don't know how consistent that was, but of the good meters I have around (as opposed to really cheap ones seen as tuning meters in various bits of consumer equipment) I think they all have the value printed on the paper.

>> The panel meter (plate voltage 0-3Kv) of my Linear amplifier fl-2100Z is broken.
>
> We often see requests for analog meters, which are fragile and hard to come by, to say nothing of expensive. If the objective is to refurbish a vintage amplifier, then probably the best bet is to find a junk amp to cannabalize for parts.
>
> But if the objective is to actually -use- the amp, then a micro and an LCD, along with a little design work, can lead to a meter that is more accurate, more robust, and cheaper than the original.
>

==============================

However in the RF environment of an power amplifier it might be very difficult to suppress RF in a micro/LCD equipped device.

I would go for a replacement moving coil meter by checking the voltage metering circuit resistors and after finding a suitable low mA meter (size wise) ,determine its resistance and initially replacing the defective meter with a resistor of that value. You then can measure the mA current through that resistance . If that current is higher than the replacement meter can handle ,replace a series resistor in the voltage metering circuit by a (preferably ten-turn) trim potmeter and adjust the current through the resistor to the corresponding current through the future replacement meter.

You then either change the replacement meter's scale or accept the existing one . Then install the replacement meter ,removing its temporary replacement resistor in the circuit and finally with a suitable HV meter adjust the reading of the new meter with the trimpot .

If the above HV meter can't handle 3000 V but say only 1000 Volts ,use a variac at the AC supply   input to the amp and temporarily reduce the HV-DC voltage to the amp to 1000 V   Then adjust the meter reading (with the trimpot) to 1/3 of the meter scale.

After all ,this is a homebrew NG.

Several notes re epoxy for encapsulation:

- Epoxy formulations vary a lot in their hardness and rigidity, viscosity when fluid, cure rate, and rapidity of heat release during cure. Most of the big epoxy companies seem to make at least one variety which is specifically intended for use when encapsulating electronic components. These formulas seem to be more flexible when cured, and some of them are being advertised as providing shock and thermal-stress protection.

- Other commercial electronic-gear encapsulants seem to be based on urethane, or on two-part silicone rubber formulas.

- I've had some success in doing small encapsulating projects by using a mixture of a low-viscosity slow-cure epoxy (one of the TAP Plastics formulas) and fine white sand, mixed up in a thick slurry. This mix is a good deal less expensive than using straight epoxy resin, it has much less shrinkage, and should have rather better thermal conductivity. When it's poured into a mold, the sand tends to settle to the bottom before the epoxy hardens, leaving the top layer in the mold as nearly-pure resin (a nice smooth surface).

I am trying to modify and adapt a Kenwood TH-D7A/E HAM Radio for a project. I have looked at the schematics, but I could not figure out how to set the radio to be permanently in an ON state, or how to reset the radio from an OFF state to an ON state.

Any idea on how this can be done will be appreciated.

I've got an RFSpace, Inc. SDR-IQ Software Defined Radio, which is a truly nifty gadget, but it stops at 30 MHz. I'd like to put together a downconverter that I can drive with a DDS LO or my HP 8640B, to pull the stuff above 30 MHz down into some part of the HF (or lower) spectrum. It would be nice to be able to see a 190 KHz chunk of 6m or 2m or 70 cm., as I can with the spectrum below 30 MHz.

At the moment, I'm looking at just plumbing together a MiniCircuits mixer (probably +3dBm or so), some low-pass filtering, and maybe some front-end gain so that I can be sure there's enough RF to drive the mixer.

Does anyone know of
COTS boxes to do this, or
designs in QEX or some other ham publication to do this, or
another ham who has done this or is working on it?

If someone here is doing or has done this, I'd love to know if I need a gain block before the mixer. Other constructive comments will be welcome, too.

I have considered using subassemblies from C-band satellite receivers for
a similar task; the bandwidth may not be as great but certainly useful
for some tasks, and the tuning range is substantial (sorry I don't have
useful numbers while I am posting this).

Regards,

Michael

I have to disagree here. For time-varying parameters of great interest
- certainly plate current is the most interesting, but only a little
behind is plate voltage - analog meters, and them bouncing up and down
in response to modulation, are essential to correct operation and
maintenance.

Bargraph-type LED or LCD meters are popular on recent equipment, and
while they have the visual trend to the eye and also lack moving
parts, they still aren't up to the same snuff that good old fashioned
analog meters have.

The thought of watching modulation peaks using a digital panel meter
is laughable. Maybe if you're sending an unmodulated carrier it would
be of value!

Tim.

Hi Eric,
I downloaded a copy of the manual from http://www.mods.dk and it shows
pin outs of ACC-2 on page 14 below the drawing of the back panel.
ACC-2, a 13 pin DIN, has stuff like PTT, data output for TNC's, data
input from TNC's, etc.  ACC-3 is listed for the AT-250, and I'd download
that manual but mods.dk only lets you download one free manual every
four days.  They're a great resource for manuals and mods by the way, I
should really cough up the few dollars they want for unlimited downloads
but I'm not really doing much that needs manuals right now.

Good luck!

I'm just wondering if I can build a QRP transmitter for 40-20-15 and
10 meters in SSB to use it for PSK, RTTY, and other digital modes.

Many thanks

Mike,

With what you describe, the COTS box would be a connectorized
MiniCircuits mixer. Just attach the antenna to the RF port, the signal
Generator to the LO, and the receiver to the IF ports. The noise figure
will be kind of high, but you should be able to see moderately strong
signals. A MiniCiruits amp in front would help sensitivity a bit, but
at the price of possible intermodulation from strong signals. Adding
additional RF and IF filtering would help as well.

Good luck and 73,
Erich N6FD

Dave,

Thanks for your email regarding CE EMC, etc.; your SMTP server
is rejecting my reply to you:

smtp;417 SPF error ipx1.cybertheque.net: Address does not pass the Sender Policy
Framework

This is most likely due to your IMTA rejecting messages originating from our
private network which isn't publicly visible through DNS. Can you fix?

Regards,

Michael

What suggestions would you have for a good book on the design of
communications receivers? I have a copy of Rohde and Whittaker,
"Communications Receivers" and am working my way through it. It seems very
comprehensive and this level of detail is what I'm looking for, but some of
their explanations are a little hard to follow.

I would appreciate knowing what, if any, books others have found useful.

Thanks,

I had occasion to pot very high impedance circuit in 2 part black
potting compound, when apparently set it failed to function correctly,
after 2 days all was ok.
my conclusion was that the chemical reaction was generating conducting
ions and conduction ceased when the reaction finished.

The books by Wes Hayward and his buddys, will give you stuff that
actually works..
Try:

 Experimental Methods in RF Design
-- by Wes Hayward, W7ZOI, Rick Campbell, KK7B, and Bob Larkin, W7PUA

And several others in the ARRL catalog...

denny / k8do

I was going to look up modulation transformers and googled on Peter Dahl,
and there was a link to a ARRL URL where they said he's got Parkinsons and
the company is going to close doors Dec 31, 2007.

So, now what are we going to do for weirdo stuff like plate modulation
transformers?

I have "Experimental Methods ..." and I agree it's an excellent one. If you have the book you might want to check out Wes Hayward's web site

http://w7zoi.net/em0.html

for a list of errata (it's a long one) for the book. I guess that the proof
reading was a little skimpy!
An updated new edition seems to be called for.

This is not to take away anything from Hayward and the other authors. My hat
is off to them and
people like them who have contributed so much to ham radio over the years.

Jesus! The whole broadcast industry relies on him, not just the amateur
community.

>So, now what are we going to do for weirdo stuff like plate modulation
>transformers?

Getting weirdo stuff rebuilt isn't all that difficult, if it's large
enough. There are a couple good transformer rebuild shops in my state
which mostly do pole pigs but can be encouraged to work on big chokes,

power and modulation transformers if the money is right.

But getting brand new stuff.... there's nobody like Dahl. And getting
rebuilds for small transformers.... again, the guys are unique.

Maybe Martin (MFJ) will buy the "Ham" side of the company, if there is one.

TenTec has wound some of their own xfmrs and also bought from a company
in Canada.

Just a bit more: if anyone wants to check it out, the story is here:

www.arrl.org/?artid=7889

Or, if you put "peter dahl" into the google search box, the link comes up
pretty high on the first page of search results.

I've sent an email to Hammond (they make a lot of transformers of the old
style [eg for tube radio projects, including pretty hefty plate
transformers eg. 500 watts plus, and sold through Radio-Daze, and some at
Fair Radio Sales]) about whether they might do "one-of" orders but I'm
sure they won't want to do lots of one without big buck costs and I'm not

the DOD, DOE.

I'm probably going to make a telephone call to Dahl tommorrow and see if they answer the phone and what they say. No news on their websites, so someone is asleep at the switch.

I did a google on "electric transformers" and got a lot of hits and its going to take a while to search them. The vast majority of todays transformer markets are all solid state low voltage stuff. tsk, tsk. Even Newark and Mouser (for two [who else out there? Allied? Pioneer? couple others? DigiKey?]) don't carry any transformers, much, for tube gear voltages, let alone modulation transformers. And, here I was, thinking about a homebrew pair of 811-As in parallel, class-C, modulated by a pair of 811-As in push pull class B. Well...that idea just went poof.

So, somebody moved my cheese.

Of course it has to be in transmit while you loosen the granules so
that there is good current flow through the granules...

Anyone know of a replacement for the venerable SA602 oscillator/mixer that'll work down to 3.3V?

I know that NXP has complete FM IF subsystems (e.g., the SA607) that work that low, but at the moment I'm just after a mixer and oscillator and wouldn't need the other goodies in an SA607.

Thanks,
---Joel

Can we order for reasonable amount ? I found many distributors that
needed $300 per line when ordering stuff.

I put an order through ACME and finally they had only 1 available and
never told me before shipping it out. Which left me with an order of
$25 for 1 driver !!! They could refund me the transistor if I ship it
back to them... So I would have spent $20 for nothing ! (Price was
$11.99 ea.)

I'll keep it in case Andre can't send me those he has or even if
they're not "top shape"...

Thanks Jack

There is a program called Graph Paper Printer byu Philippe Marquis in France. I use it and it is great for making such dials. You can designate the number of tics, the angle rotation that they cover and the starting point. Easy to use. I purchased a number of years ago and have not been able to find it recently. I think there were shareware versions, although I bought a key for mine. It is great for many different things.

> A general question, is their a free software program to make potentiometer
> tic marks.

Of course, the best solution is a CAD software package such as Autocad or TurboCad, but they are not free (not even close!!). I have used a free (demo) software called Meter (http://www.tonnesoftware.com/meter.html) with great success. Its intended purpose is to design and print scales for analog meter movements, but in fact it can be used for anything that needs a circular pattern. I've used it many times for pot legends, and it works great for that. An advantage is that it will draw the lines, but also give you a label for the control (Volume/Tone/Bass/Treble/etc). It will also allow you to select the number and size of tic marks between the start and finish.

The only caveat is that the trial version allows only ten (10) sessions before the printing functions stop working. The workaround is to (1) buy the licensed version, or (2) uninstall after 10 uses, then reinstall. If you're using Windows XP or Vista, you can create a savepoint just before install, then restore after the 10 sessions run out. That will insure a clean install for the next 10 sessions.

MI5 Persecution: How Could It Be True?

If you have the patience to read these articles you will be struck by how apparently fantastic the claims being put forward are. You may ask yourself why such seemingly nonsensical assertions are made. This matter has been discussed on the Internets UK-local newsgroups for three years now, and the denizens of the uk.misc newsgroup (the so-called "miscreants") have come up with a number of theories to explain these posts; it has been variously suggested that they are a troll (an artificial creation for the amusement of its author), that they are made by MI5 themselves with the purpose of discrediting other conspiracy theories, and that the poster is mentally ill and the articles are symptomatic of the illness (the view held by most miscreants).

Are these claims the product of mental illness, or is that just a cover?

The most obvious explanation, that the claims made result from the admitted mental illness of the author, is the one which the persecutors intend be the one accepted without consideration being given to the possibility of the claims being true. The persecutors have actually been very clever about this, both in selecting as their target someone who was known from school or university as being borderline schizophrenic, and in ensuring the nature of their persecution corresponds to what often features in the delusions of a schizophrenic.

The very first incident of the persecution occurred in June 1990, when I was still a student at university in London. It consisted of a reaction (giggling) from the newsreader, Sue Carpenter of ITN, to what she saw happening in my living-room at my parents home where I was living. Before your imagination gets the better of you I should make clear that what the newsreader was reacting to was not too embarrassing in nature; my mother had brought an apple for me into the the room, and Sue Carpenter found this amusing.

I recognized that Carpenter had reacted to what she had seen in my living-room, yet this idea still seemed completely fantastic to me. My reaction was to continue watching television, particularly the news, to see if this incident would be repeated. It was, many times, both on BBC and ITV. An intelligent person would have thought to obtain a video recorder and capture some of these incidents in order to try to explain to an observer what he saw in these broadcasts. Unfortunately, I failed this test of intelligence, since I did not record these programmes. I have recently attempted to obtain from ITN tapes of their news programmes dating back to summer 1990, but, unhappily, they have advised me that they do not have complete programmes including newsreaders comments dating back to that period.

From the outset, the persecutors structured their actions to ensure that any complaint would be met with disbelief, and dismissed as delusional. This is why they chose as their target someone who was known at school and university to be borderline mentally ill; and it is why they fired the first shots of their campaign through the broadcast media. Schizophrenics commonly believe the media harass them; it would be exceptional for "full-duplex television" to exist in reality. Those with schizophrenia also commonly believe people are talking about them; again, the persecutors have shown themselves very rarely, but act through intermediaries, both in the workplace, and in public and during travel.

Mental illness is not the cause of these claims, but the simulation of its symptoms is a cover used by the persecutors to deny their victim the ability to have his compaints believed.

What evidence exists to support these claims of "interactive television/radio";?

Quite frankly, I have very little evidence to support my claims. You may examine the "Evidence" area of my website to see such evidence as I have been able to gather. None of it is remotely conclusive. The "smoking guns" all date back to 1990/91, and it is really rather late now to start trying to look for material dating back seven or eight years. In 1997 I started tape-recording every programme I watched or listened to. I also started carrying with me a high-fidelity minidisc-recorder with good quality microphone to catch incidents of public harassment, but this also has not been as successful or conclusive as I had hoped.

Perhaps the best item in the "Evidence" section is the audio file "Life is so hard" (it is labelled with Garfield the cartoon character on the site), which I have given a certainty level of 100%. This item relates to harassment at my workplace in Canada in 1996. A co-worker called Mark was coming up with phrases and expressions which were repeating things being said at my Canadian residence, consequently leading me to believe that my apartment and home phone were bugged, and that the persecutors were passing their gathered information on to Mark. On one particular evening I said in my apartment, "life is so hard, and then you die". The following day I was able to record Mark saying exactly the same phrase at work.

Unfortunately when "they" know you are recording them, they simply dont say things which would unambiguously show harassment. When Mark the co-worker knew he was being recorded, he only made his remarks out of range of the recorder, for example outside the building. When the TV newscasters or radio disc jockeys know they are being taped, they limit themselves to saying things which are ambiguous, which even in my mind may or may not be personally directed against me.

Who knows about this persecution?

Surprisingly many people know. People in the media, such as BBC and ITN newscasters including Martyn Lewis and Michael Buerk, and radio disc jockeys such as Chris Tarrant of Capital Radio, know what is going on, and take part in it. Some co-workers at my former workplaces in England and Canada have known about the harassment. Quite a few people in the general public are also included. I believe the police are aware of the persecution, but, unfortunately, have chosen not to take any action to stop it. I have complained at my local police station in London several years ago, and I have stated on the internet newsgroups that I have done so, hence the police will be well aware of my wish to see the matter resolved. I believe their inaction denotes a dereliction of duty, but without good evidence, I am powerless to compel them to take steps to prevent further harassment, or deal with what has already taken place.

What is the purpose of sending these faxes?

These faxes are being sent to three distinct groups of people, namely Members of Parliament, the media, and diplomats & legal people. As you will have observed I am making use of the email-to-fax gateway at Demon Internet to send these faxes. I am forced to use this gateway since I currently live in North America, and cannot afford the high cost of direct phone calls to the UK.

My purpose in publicising my claims is firstly to discourage the persecutors from continuing their campaign, and also to attempt to bring their campaign out into the open, and thus perhaps identify the persecutors. Neither aim has been achieved yet, but I hope that with sufficient stimulation these aims may yet be accomplished.

The problem with the second aim is that those who read this article will fall into two groups, those who dont know anything about the persecution and consequently will disbelieve my claims as delusional, and those who do know about the harassment and may have some idea of who is behind it, but realise that if the harassers are exposed and the truth brought out into the open, then powerful British institutions will substantially lose prestige, and be exposed to ridicule.

It would give me hope to believe that these faxes will create a third group of people, those who find out that I am telling the truth, and who follow their consciences in standing up and seeing justice done. Only time will tell if this hope will be realized.

Why do you think MI5 are responsible?

The question of who is ultimately responsible for this eight-year harassment is one which is very difficult to answer, as the persecutors have never clearly made their identities known to the persecutee. However, I believe I am correct in attributing the continuing victimisation to elements of the British Security Service MI5, and in this article, I will try to explain the reasons for this belief.

The British internet magazine ".net" featured my website on page 17 of their March 1998 issue (number 42). Their review kindly describes it as an "excellent site" and gives some details of what the net surfer will find there. Should you wish to reply to this article you can do so;

"When did you first suspect MI5 were responsible?"

Over Easter 1995 I went to see a local solicitor in London with a view to talking to the police about the harassment. Soon afterwards I did go to my local police station in Clapham and spoke to an officer there. The solicitor made a comment which suggested to me that the persecution I had been experiencing may have been organised by an intelligence service.

Up to this point, I did not have any clear idea as to who was behind the harassment. Only their agents were visible, in the media, on television news programmes, and on the radio; in the workplace, where things said at my home were repeated verbatim; and in some cases abuse in public and during travel, for example on the trip to Poland in June 1992 which I have already described.

Both from the fact that widely disparate individuals and organisations were employed as agents in the campaign against me, and from the fact that an entity would be required to marshal their resources in the areas of spying on my home and giving gathered information to their agents, it was clear to me that a single entity was responsible for carrying out the campaign. Yet from June 1990 until Easter 1995 I did not have a clear idea of who might be responsible. I guessed that perhaps some private individual or group of persons who saw themselves as my enemies had perhaps paid private detectives to organise the harassment. Alternatively, since the campaign had started in the media, I made a far-fetched supposition that perhaps it was an ad-hoc group of media people who had set themselves up in opposition to me. After Easter 1995 I saw that these guesses were wrong, and I made an I believe much more accurate estimate as to who my enemies really are.

"Why couldn't a private group be behind the persecution?"

There are several reasons why a private individual or group would not be behind this campaign.

Quantity of resources / Money. Here is what one Usenet (internet newsgroup) participant had to say (several years ago) on the topic of how much money it would cost just to keep the surveillance going.

PM: >But why? And why you? Do you realize how much it would cost to keep
PM: >one person under continuous surveillance for five years? Think about
PM: >all the man/hours. Say they _just_ allocated a two man team and a
PM: >supervisor. OK., Supervisor's salary, say, #30,000 a year. Two men,
PM: >#20,000 a year each. But they'd need to work in shifts -- so it would
PM: >be six men at #20,000 (which with on-costs would work out at more
like
PM: >#30,000 to the employer.)
PM: >
PM: >So, we're talking #30,000 x 6. #180,000. plus say, #40,000 for the
PM: >supervisor. #220,000. Then you've got the hardware involved. And
PM: >any transcription that needs doing. You don't think the 'Big Boss'
PM: >would listen to hours and hours of tapes, do you.
PM: >
PM: >So, all in all, you couldn't actually do the job for much less than
PM: >a quarter million a year. Over five years. What are you doing that
makes
PM: >it worth the while of the state to spend over one and a quarter
million
PM: >on you?

A private individual or group would not spend over a million pounds to verbally torture a victim without some financial motive or gain. Private industry is driven by the profit motive, and there is no financial profit to be had from carrying out a campaign in this way. If a private enterprise were behind it then they would have taken direct physical action a long time ago.

State enterprises, on the other hand, can afford to be wasteful, since they are funded by the taxpayer. They do not have to show a money profit. The employees or contractors employed by a state organisation such as MI5 are driven by their own personal profit motives, to make the most money out of their employers for the longest period of time. MI5 is funded to the tune of #150M p.a.; even a few hundred thousand a year would to them be affordable if their managers could convince themselves of the necessity of what they were doing.

Quality of resources / Technical resources - electronic and other surveillance. In summer 1994 a reputable and competent private detective agency was employed to conduct a counter-surveillance sweep of my home in London. They charged us over #400 for this, conducted a thorough search for radio transmitting devices, hard-wired "probe" microphones and also tested the telephone line. They found nothing. This was not altogether surprising, since it had been made very clear to me that there were bugs in my home; the "buggers" would not have made this clear unless they had felt their bugs were of sufficient sophistication as to be safe from detection.

But there is another lesson to be gained from the failure of the private detectives to find anything. The agency employed was one of the most reputable in London. They were employed on the principle of "setting a thief to catch a thief", for if the harassment were being carried out by private detectives, as I then believed, then surely another set of private detectives would be able to find the bugs that they had planted. That these "private eyes" were unable to find anything, and that the harassers were confident that they would not be able to find any bugs, points to the harassers being an order of sophistication above a private agency, and leads me again to believe that a state intelligence service is responsible for the surveillance and harassment.

Quality of resources / Technical resources - Interception of Postal service. In summer 1994 when I emigrated to Canada to try to escape the harassment, I wrote letters home to my family and friends in London. Quite soon after my arrival in Canada, the harassers were able to find precisely where I was staying. The only way I can see of "their" being able to find out my new address was by interception of my letters to the UK.

Later in 1994, I conducted an experiment to see if my letters home were indeed being read. In a letter home I wrote of being depressed and talked in vague terms of suicide. I deliberately chose this topic, since I believed it was the outcome my harassers were trying to achieve, and that if they read the letter, they would "echo" its contents. Sure enough, soon afterwards there were two incidents of people shouting "suicide" at me in public places in Canada.

It is inconceivable for a private agency to have the ability to intercept postal mail. The state security service on the other hand is well known to engage in these activities.

Quality of resources / Access to Media. One of the strangest aspects of this case is the access "they" have to the broadcast and print media. I still do not understand what could persuade newscasters such as Martyn Lewis and Michael Buerk, who consider themselves "gentlemen", to behave in an almost voyeuristic way by "peeking" into the living room of one of their viewers. A year ago I wrote to the BBC asking if these newscasters would confirm or deny the accusations made against them. The BBC replied that their newscasters had denied the accusations, but refused to do so in writing.

It is well known that MI5 have the ability to plant stories in certain newspapers, but convincing television newscasters to "watch" a viewer while they read the news would surely be very difficult for them to accomplish, unless they presented themselves to these journalists as being, for example, a group in the media who were seeing to it that I got my "deserved" treatment. MI5 has a history of manipulating the media, so it might not be too difficult for them to accomplish such a trick, whereas a private group would not have this ability.

"Have they ever denied that they are the Security Service?"

No. Never. This is in fact the main reason why I believe "they" are MI5 and not a privately funded group. If my guess had been wrong then I am sure that "they" would have crowed over my mistake, but they have never admitted nor denied that they are employees of MI5.

In early January 1996 I flew on a British Airways jet from London to Montreal; also present on the plane, about three or four rows behind me, were two young men, one of them fat and voluble, the other silent. It was quite clear that these two had been planted on the aircraft to "wind me up". The fat youth described the town in Poland where I had spent Christmas, and made some unpleasant personal slurs against me. Most interestingly, he said the words, "he doesnt know who we are".

Now I find this particular form of words very interesting, because while it is not a clear admission, it is only a half-hearted attempt at denial of my guess that "they" = "MI5". Had my guess been wrong, the fat youth would surely have said so more clearly.

"If MI5 were behind it, why would they wish to mask their involvement?"

I have heard a number of times a belief from people in the media that it is they, the media people, who are behind the abuse. In spring 1994 Chris Tarrant the Capital Radio D.J. said sarcastically on his breakfast show, "You know this bloke? he says were trying to kill him. We should be done for attempted manslaughter". We, we, we. Tarrant thought it was a media conspiracy.

Returning to the question of "interactive watching" by television newscasters, it would again be much easier for them to take part in that sort of activity if they convinced themselves that the surveillance and abuse were organised by "their own", by media people. It must be second nature to MI5 to mask their involvement in the matters they deal with; in this case, they pretend the campaign is organised by a group in the media, and any journalists who suspect otherwise keep their silence.

Conclusion

Over the last three years I have stated with some force my belief that MI5 are responsible for my misfortunes. I have done so on Internet newsgroups, in letters and faxes to people in politics and the media in the UK, and in 1997 I made a formal complaint to MI5 regarding their activities; the Security Service Tribunal replied in June 1997 that "no determination in your favour has been made on your complaint". (I believe the statement by the Security Service Tribunal can be disregarded, as they have never, ever made a ruling in favour of a complainant.) In three years of naming MI5 as my oppressor "they" have never denied the charge. To me, their silence on this point indicates that my guess was accurate. I believe my persecutors stand identified. The question of why they should carry out this campaign is one I will try to answer in a future article.

MI5 Persecution Update: Friday 15 May, 1998

The persecution has been quite severe for the last week. It appears that my enemies are reacting to the steady stream of faxes making their way over the Atlantic to the fax machines of Westminster politicians and the media. Here is whats happened in the last few days;

The week started off with an incident in the cafeteria at a local shopping centre where I habitually drink my morning coffee. My enemies have concentrated since winter 1995/96 on throwing a particularly horrible sexual slander against me. They "put people up" to repeat this slander against me, and this is what happened again here.

On Thursday morning (yesterday), instead of going to the usual cafeteria I went to a nearby convenience store for coffee. The same horrible sexual slander was shouted at me very loudly by a member of staff as I walked into the store. This was the first time I had ever bought morning coffee in that shop. The other staff obviously knew what was going on, one of them said, "they screwed up my life".

The fax gateway I use to send these faxes to the UK has been working hard these last few days to shut down my access by barring the accounts I use to send these faxes.

I have received an anonymous threat from fax number 0171-219-6101 (the machine gave its name as "ETRA-HoC") which said, "Stop sending to this fax no 0171-219-6101 or else" (the consequences of continued transmission were unspecified). I invited the sender to apologise for his threat, but received no response.

This all adds up to quite a severe reaction to my faxes of the last few weeks. I actually find this quite heartening since it shows that my faxes are finding the mark and there may yet be a breakthrough in my efforts to expose the Security Service conpiracy of abuse against me which has now been going on for eight years.

MI5 Persecution: "Why would they be doing this to you, sir?"

This article will concentrate on the difficult question of "Why". The question which forms the title of this piece was asked of me by the police officer I spoke to in Easter 1995, when I went to make my complaint.

There are really two sides to this question. Firstly, why should MI5 be harassing anybody in this fashion? Secondly, if they choose to behave in this way, why should they have selected me in particular, and not somebody else? Alternatively, why did the persecution start, and why is it continuing?

I do not have definite answers to either side of this question, since my persecutors have usually kept themselves hidden and only acted through other parties. To know "why", one would have to know who the persecutors are, and something of their personalities, since their abuse is almost certainly symptomatic of a personality disorder of the abusers. Certain things however can be deduced about the abusers from the nature of their behaviour, and I will talk about this later in the article.

Why did it start?

It is clear that the persecution must have been initiated by someone who knew me personally, either at school, or at university, or socially, and knew that I was borderline mentally ill, since this is what makes me a target for the persecutors. Unfortunately, the originators have never been identified, and there are several possible candidates. Neither has the link from the originators of the persecution, to the persecutors themselves, ever been made clear. So who are the originators?

University Staff

The identity of the originators may lie in the timing of the persecution. It started in June 1990, while I was finishing a course at Imperial College in London, and a year after I graduated from Cambridge, where I received a degree in computer science. At Cambridge I had achieved some notoriety in the computer lab from various nefarious exploits. Roger Needham attacked me by saying that "there were great hopes for it, but it failed terribly". When I started at Imperial I found that my reputation had preceded me; Cambridge computer lab had spoken to I.C. lecturers about me. I.C. lecturer Frank McCabe summed up commenting about "setting up a straw man so you can tear him down". (Despite being "torn down" by the Cambridge computer labs lecturers, I still achieved a good first degree and a Masters degree at Imperial.)

Other students at university

So, the originators may have been university staff who knew me from my student days. But there are other possibilities. I had other enemies at university, including some fellow students. At my Cambridge college it was common knowledge that my mental health was dubious, and it was known that I talked to myself in my sleep - the floor and walls were quite permeable to noise, so other students heard. I was given the nickname "gibber" because of this habit. Sometime later, I managed to catch myself talking in my sleep when I woke up in the middle of the night.

Here is a quote from a participant in the internet newsgroup where I have been posting for the last three years;

>One thing which has been missing from this discussion is this simple
>prognosis: that maybe he is right and that, despite his admitted
>mental condition, there really is a campaign against him organised by
>now-influential ex-students of his university.

People I knew socially

I had yet other enemies in 1990 (I am a man of many enemies!). In January 1990 I broke up with some people I had been going out with socially. One of them, by the name of Andy Turner, wrote a letter to Alan Freeman, who at the time was a Radio 1 DJ. Freeman read part of the letter out on his Rock Show, about the "one who wore out his welcome with random precision", saying "thats a hell of a letter you wrote there Andy", and "with a schizophrenic youre never alone".

It is my belief that Andy Turner and his friends were trying to make trouble for me, and Turner wrote to Freeman with this in mind. Freeman may have discussed the letter with others, and things may have snowballed from there. This is, of course, pure supposition. The fact is that I do not know who the originators are, and can only guess.

Once it started, why is it continuing?

The answer to this question is obvious. It is unacceptable to the "powers that be" in the UK to have somebody running around who knows he has been targeted by the Security Service and media organizations, and who is in a position to embarrass British institutions. This has become particularly evident in the last week; as I send more faxes to UK politicians and media, so the pressure on me grows, and the volume of abuse increases.

Part of the reason the persecution continues is in the personalities of the abusers, and it is this subject to which I will turn to next, since the key to understanding the persecution lies in understanding those who carry it out, as much as we can.

The Security Service operatives, the persecutors, are they psychopaths?

Let us first examine the definition of the term "psychopath". DSM-IV defines "anti-social personality disorder" as a "pattern of disregard for and violation of the rights of others ... deceitfulness, irritability and aggressiveness ... consistent irresponsibility and lack of remorse". The Harvard Mental Health Letter of Sept 1995 describes these people as using "charm, manipulation, intimidation and violence to control others and satisfy their own needs. Lacking in conscience and in feelings for others, they cold-bloodedly take what they want and do as they please", having "no guilt or regret".

I must say, reading this description of the condition, that it fits the persecutors perfectly. The persecutors have never shown the slightest remorse or guilt. Even when I was severely ill, they continued to abuse me. They have repeatedly blamed their actions on me, which is another trait common amongst psychopaths. They have no respect for my legal or personal rights, and they use intimidation and verbal violence.

If the MI5 operatives are psychopaths then it would explain both why the persecution started, and the degree of verbal violence. Psychopaths by definition damage other people; here, the MI5 operatives find an outlet for their personality disorder, through "cripple-kicking".

Xenophobia on the basis of mental illness, and race

My enemies have made clear many times that one of the reasons they are persecuting me is because of my admitted mental illness. However, it is my belief that they are also persecuting me because I am not of ethnic English origin, and the fact that there have been several incidents of an overtly racist nature reinforces this view.

In one case, two youths on a tube train in London made openly racist references to me as a "soft toy, not up to British Standards". Another person near my home made remarks about "Polish people". In yet another incident in Croydon, a youth made comments about "foreigners".

But the main thrust of their xenophobia is because of my mental illness. I should make clear that I do not look ill; if you met me, you would not know that I had the illness. I take a relatively low dose of medication, and feel quite well. But the persecutors have repeatedly harped on about my supposed serious mental illness; they have called me a "nutter", a "schizophrenic", etc. They have also persuaded other people to use these terms of abuse. They are able to get away with this because abusing the mentally ill is still something which is mostly acceptable in Britain; the media do it, "nutter" is not taboo in the way that "nigger" is.

Conclusion

There are several groups of people who might have wished to cause me trouble, and I still do not know who originated the persecution. Nor do I know how the originators came to be in contact with the (presumed) Security Service operatives who have been carrying out the campaign. To know conclusively why it started, we would have to know who started it, and this information is not available.

However, we can infer some things about the personalities of the persecutors from their methods, and from the degree of verbal violence they employ. It is clear that a main reason for the continuing harassment is the psychopathic disorder of the MI5 agents who carry it out. That they have never been "brought to book" for their misdeeds reinforces their belief that they do no wrong; and, unhappily, until they are brought to book, their persecution campaign looks set to continue.

MI5 Persecution: .net Magazine Applauds my Website

The March 1998 issue (number 42) of .net Magazine reviews the MI5 Persecution website describing it as an "excellent site". The webpages describe in detail the nature of my persecution since 1990 by what are believed to be elements of the UK security service.

(snip image)

You are encouraged to read the web pages which include

o   a FAQ section outlining the nature of the persecutors, their methods of harassment through the media, people at work and among the general public
o   an evidence section, which carries audio and video clips of media and workplace harassment, rated according to how directly I think they refer to me
o   factual descriptions of the state security agencies involved
o   scanned texts of the complaints I have made to media and state security agencies involved
o   posts which have been made to netnews over the last three years on this topic

MI5 Persecution Update: Friday 13 November, 1998

If You Intend To Reply, Please Read This

If you have any questions or observations you would like to share with me, then you are very welcome to reply to my fax number 0171-681-1190. But please.... keep your response to one page if you can! I have had several people faxing my article back to me, including one MP faxing back twenty pages. I do not know if he had anything intelligent to say in his 20-page fax because I applied judicious use of the "Delete" key on my computer. Faxes over a page or two will be deleted without being read.

MI5 Resume Hostilities in Response to these Faxes

When I wrote last weeks "MI5 Persecution Update" I remarked how quiet my life had become. No longer! MI5 have restarted hostilities with a vengeance the past week, in response I believe to the faxes I have been sending to members of the House of Commons.

On Saturday 7 November I went to Clapham Picture House cinema to see the film "Antz" (a very enjoyable film). At the cinema, I was verbally assaulted by a group of teenagers with the words "still crazy", repeated about ten times. There was a film with that name showing at the cinema, but it was clear their abuse was directed at me. I do not look ill, so why would they pick on me? answer, the incident was set-up by the persecutors. One of the teenagers also said to another, "I don't know what we're laughing at".

The following day, Sunday 8/11/98, I was on my way to play squash when I was verbally assaulted by a youth who said "it was so funny", without the slightest trace of humour. What he meant by this phrase was that was funny, and they were trying to humiliate me. I have heard this phrase "it was so funny" used at me before many, many times over the last eight and half years.

Please Encourage Keith Hill MP to Help Me

I live in a bugged house, bugged both for audio and video. My movements are monitored by MI5. The Security Service have followed me to Canada, to Poland and the Continent, to the States. I cannot work anywhere, not in England, not in Canada, because MI5 will destroy whatever employment I am able to obtain. I have asked Keith Hill MP to help me, and he has refused.

The situation is intolerable. It is Mr Hills job to help me out of this mess. So, please, as I said in the last fax a week ago: Do not waste your time returning multiple copies of my faxes to my fax mailbox, as some of you have done. Instead;

Please encourage Keith Hill M.P. to help me.

I am sorry to be using this device to encourage Mr Hill to help, but I think eight and half years are quite enough and it is time something was done to bring this matter to a close.

MI5 Persecution : BBC Newscasters Spying on my Home

This week's topic is the quite extraordinary claim that BBC newscasters such as Martyn Lewis and Michael Buerk have spied on my living room while they read the news. I currently have an advert running for the next six months in Private Eye's "Eye Say" column (at a cost of over #200) which says,"MI5 Persecution - BBC Newscasters Spying on my Home"; the story of my campaign in the Eye is on my Website at; http://www.pair.com/spook/evidence/plaint/priveye.htm

BBCs staff magazine Ariel also ran my advert "BBC Newsreaders Spying on my home" for one issue in the Personal category on 8/July/1997 before it was spotted and axed by editor Robin Reynolds; please see webpage; http://www.pair.com/spook/evidence/plaint/ariel.htm

Beginnings

The very first incident in the "MI5/BBC Persecution" occurred in June of 1990, when a newsreader reacted to what she saw in my living room at home as she read the news. My mother had brought an apple for me into the room, whereupon the newsreader smirked and giggled, apparently finding this funny. I couldn't believe what I was seeing. I carried on watching news and other television programmes to see if presenters would show signs of "interactive watching"; to my surprise, this happened again and again. Unfortunately, I did not have my wits sufficiently about me to videotape these programmes, and it is now almost impossible to obtain recordings dating back to 1990.

Most of the "TV watching" has occurred on the news, and most of it in summer 1990, although some as late as autumn 1993. My website has a few extracts of what might be politicians "getting at" me, in particular John Major and interviewer Dimbleby sharing a joke about the "Knutsford Guardian" which is almost certainly about me.

I sold my portable TV in autumn 1990 and stopped watching television regularly. I realise now that this may have been a mistake. What I should have done was to watch TV and listen to the radio, but tape-record everything and make a note of what each excerpt meant to me. I would then be in a much stronger position as regards to evidence that I am now. That is what I am trying to do now, but unsurprisingly the TV/radio presenters have stopped getting at me, now they know they are being recorded.

Examples of Media Harassment

Here are a few examples which I can still remember of media harassment;

In early 1992 I was watching the BBC news with Martyn Lewis on a small black-and-white portable television at my then home in Oxford. I threw a term of abuse at Lewis; he flinched, then gave a grin and made a comment from which I understood that he had been on my side, but might have changed his mind as a result of what Id just said to him.

Victor Lewis Smith in his TV (BBC2?) program at the end of 1993, had a taxi-driver saying, "theyre all out to get me", to which VLS replied, "but you're quite intelligent aren't you?" (what a nice chap VLS is, compliments no less!)

Paul Daniels the TV magician, sometime in 1990-92 (sorry I can't be more precise but it was so long ago), made a "crying face" and put his face in his hands, which was his way of expressing that I was frequently crying in 1990-92, and that he and other media people found my crying funny.

Kenny Everett (deceased) on some talk show, compared me to a "huge ape" who "scratches himself"; he made some other remarks about what the "ape" got up to which unfortunately I cant remember. (I remember that Everetts comments were quite sympathetic and human, but were obviously about me.)

Stephen Fry on another talkshow (Wogan I think) talking about "masturbatory fantasies", he then referred to me with the words "you prat"; I wonder if the studio audience knew what he was talking about and to whom his comments were directed?

Griff Rhys Jones on Clive James' TV show, made a "lunatic face" (wide fixed grin) to which I said to the TV that he had a "face like a horse's arse", to which Clive James said to GRJ "did you hear that?"

Crimestoppers summer 1990, remarks by a Midlands police officer on the programme, while Nick Ross was presenter (as far as I can remember). The officer talked about "in car entertainment". Nick Ross said to officer, "why don't you stop doing it?" to which he replied, "we can't while he's like this".

BBC2 Newsnight in autumn 1993 had a piece on football hooliganism. A black interviewee said apparently of the hooligans, but in fact of me; "they're just idiots, carry on with the surveillance".

There was an incident with Jonathan Ross which I remember clearly; he was on both BBC and ITV television at the same time, one (ITV I think) was recorded, the other channel was live. Ross has a speech impediment which causes him to pronounce his "r"s as "w". I sarcastically said something about "Mr Woss" to the recorded channel, then turned over to where he was live, and he repeated "Woss" with heavy emphasis and sarcasm.

On the radio, in spring 1994, Chris Tarrant made a sarcastic remark in his morning show, saying "he says were trying to kill him, we should be done for attempted manslaughter", to which another of the studio staff said, "oh no, dont say that". His comment was in reply to a comparison Id made the previous evening between my persecutors and the Polish secret police who murdered dissidents.

Martyn Lewis Denies & Lies, But Wont in Writing

In February 1997 I wrote to BBC Viewer & Listener Correspondence and asked them to investigate the claim that their newscasters had engaged in "interactive watching". They replied that they had asked Martyn Lewis and Michael Buerk whether they had engaged in such practices, and that they had both made verbal denials to VLC, but were refusing to put their denials in writing.

I can understand that they might think that if they were to make written denials to me, then many other people with my condition might write to them with similar questions. But Ive asked a couple of journalists if theyve been writing about me, theyve made written denials, Ive believed them, and I have not put their denials on my website because, since I believe their denials, it would not be relevant to publish them.

To me it looks as if Lewis and Buerk are happy to lie verbally but not in writing, because written falsehoods would place them unambiguously in the wrong, whereas they can try to talk their way out of verbal lies if they are ever caught, or perhaps even deny the verbal lies completely? If they lie without shame, then why would they have any shame about future lies about lying?

One of the strangest aspects of "TV watching" is that Buerk and Lewis have convinced themselves that their "interactive spying" is reasonable behaviour. Martyn Lewis thinks of himself as a "gentleman". He expressed in 1992 that he was "on my side". If this matter ever comes out into the open, I wonder what these newscasters will have to say for themselves, and what the British public will make of their behaviour?

Media Persecution Evidence on my Website

You may directly access the Evidence section on my website at URL;

The category currently contains four video segments, a number of audio files and three published articles. The first video of ITN's John Suchet is unfortunately a mistake - after looking at it again it is obviously not about me. The two Ken Clarke excerpts may or may not be about me; it is funny that he should keep on harping about "paranoia" and "madness", but I have given these ratings of only 30% certainty, as it is more likely that they are not about me in particular, and Clarke is simply displaying the normal prejudices against the mentally ill found in much of society.

The piece I find most interesting is the Dimbleby/John Major interview from April 1997. I have assigned this a 90% rating. Dimbleby starts by emphasising a report from the "Knutsford Guardian". Major recognizes what's going on and joins in with a falsely apologetic "heaven forfend". The emphasis is on the first syllable pronounced "nuts" in "Knutsford", which is repeated three times. Of course this is hardly anywhere near convincing evidence; the really clear items were all in 1990-92, and they are basically unobtainable now.

If you're reading the website, have a look at the two files from David Hepworth's programme on GLR radio. The first one from 21/Feb/1997 has him talking about an "embarassment" of prizes and "absolute obscene", in reference I believe to the verbal sexual abuse that was being used against me at the time (and which unfortunately is still current). In the second file dated 9/May/1997 he again talks about "absolute embarrassment" of prizes, followed by laughter. To my mind he knows I am listening to his programme, and deliberately makes these remarks for my benefit, with very little attempt to disguise their purpose.

Bernard Levin - "Fanatic's Fare for the Common Man"

On 21 September 1991 this article by Bernard Levin appeared in The Times. It is reproduced in the Evidence section of the website, or may be accessed directly at URL;

To my mind, Levin's article described the situation at the time and in particular a recent meeting with a friend, during which I for the first time admitted to someone other than my GP that I had been subjected to a conspiracy of harassment over the previous year and a half.

Levin writes about a "madman running loose about London" who "bursts into tears, and swears it is all true. And it is." I am pleased to agree with his assertion that "it is all true" because the truth is what I presented to my friend in September 1991 and it is what is being presented to the readership of these articles now.

Conclusion

The harassment, in particular media persecution, was at its strongest in 1990-92. Today, I am recording everything I watch, read and listen, and the media have pretty much given up. It is now incidents "in public" which make up what there is of MI5s persecution. But much of the material from 1990-92 still exists in archives, although the organisations which have those archives generally wont make the material available to the public, for copyright and other reasons.

MI5 can no longer employ the media to persecute me, partly because journalists now know who is behind the persecution, and also because I would publish any instances. My mistake during 1990-92 was to not record instances as they happened; Ive learned from that mistake, and know better now.
